

Crop Mapping using Synthetic Aperture Radar (SAR) and Optical Remote Sensing

April 6, 2023

Training Outline

April 4, 2023

Crop Classification with
Time Series of
Polarimetric SAR Data

April 6, 2023

**Crop Classification with
Time Series Optical and
Radar Data**

April 11, 2023

Monitoring Crop Growth
Through SAR-Derived Crop
Structural Parameters

Homework and Certificate

- Homework Assignment:
 - Answers must be submitted via Google Form
 - Due Date: April 25, 2023
- A certificate of completion will be awarded to those who:
 - Attend all live webinars
 - Complete the homework assignment by the deadline (access from website)
 - You will receive a certificate approximately two months after the completion of the course from: marines.martins@ssaihq.com

Training Objectives

After participating in this 3-part training, attendees will be able to:

- Explain how polarimetric parameters are used for crop condition assessment
- Demonstrate how to perform Sentinel-1 SAR preprocessing to derive quasi polarimetric parameters
- Perform a calibration of a SAR-based vegetation index to NDVI
- Monitor crop growth with multitemporal polarimetric SAR (PolSAR) data from Sentinel-1
- Examine crop growth using a canopy structure dynamic model and time series of Sentinel-1 imagery
- Classify crop type using a time series of radar and optical imagery (Sentinel-1 & Sentinel-2)

Monitoring Crop Growth Through SAR-Derived Crop Structural Parameters

Prof. Krištof Oštir, Asist. Matej Račič

April 6, 2023

Outline

- Satellite Image Time Series
- Copernicus and the Sentinels
- Time series generation
- Analysis ready data
- Time series analysis
- Sentinel Hub
- Statistical API
- Machine learning
- eo-learn
- eo-workflow

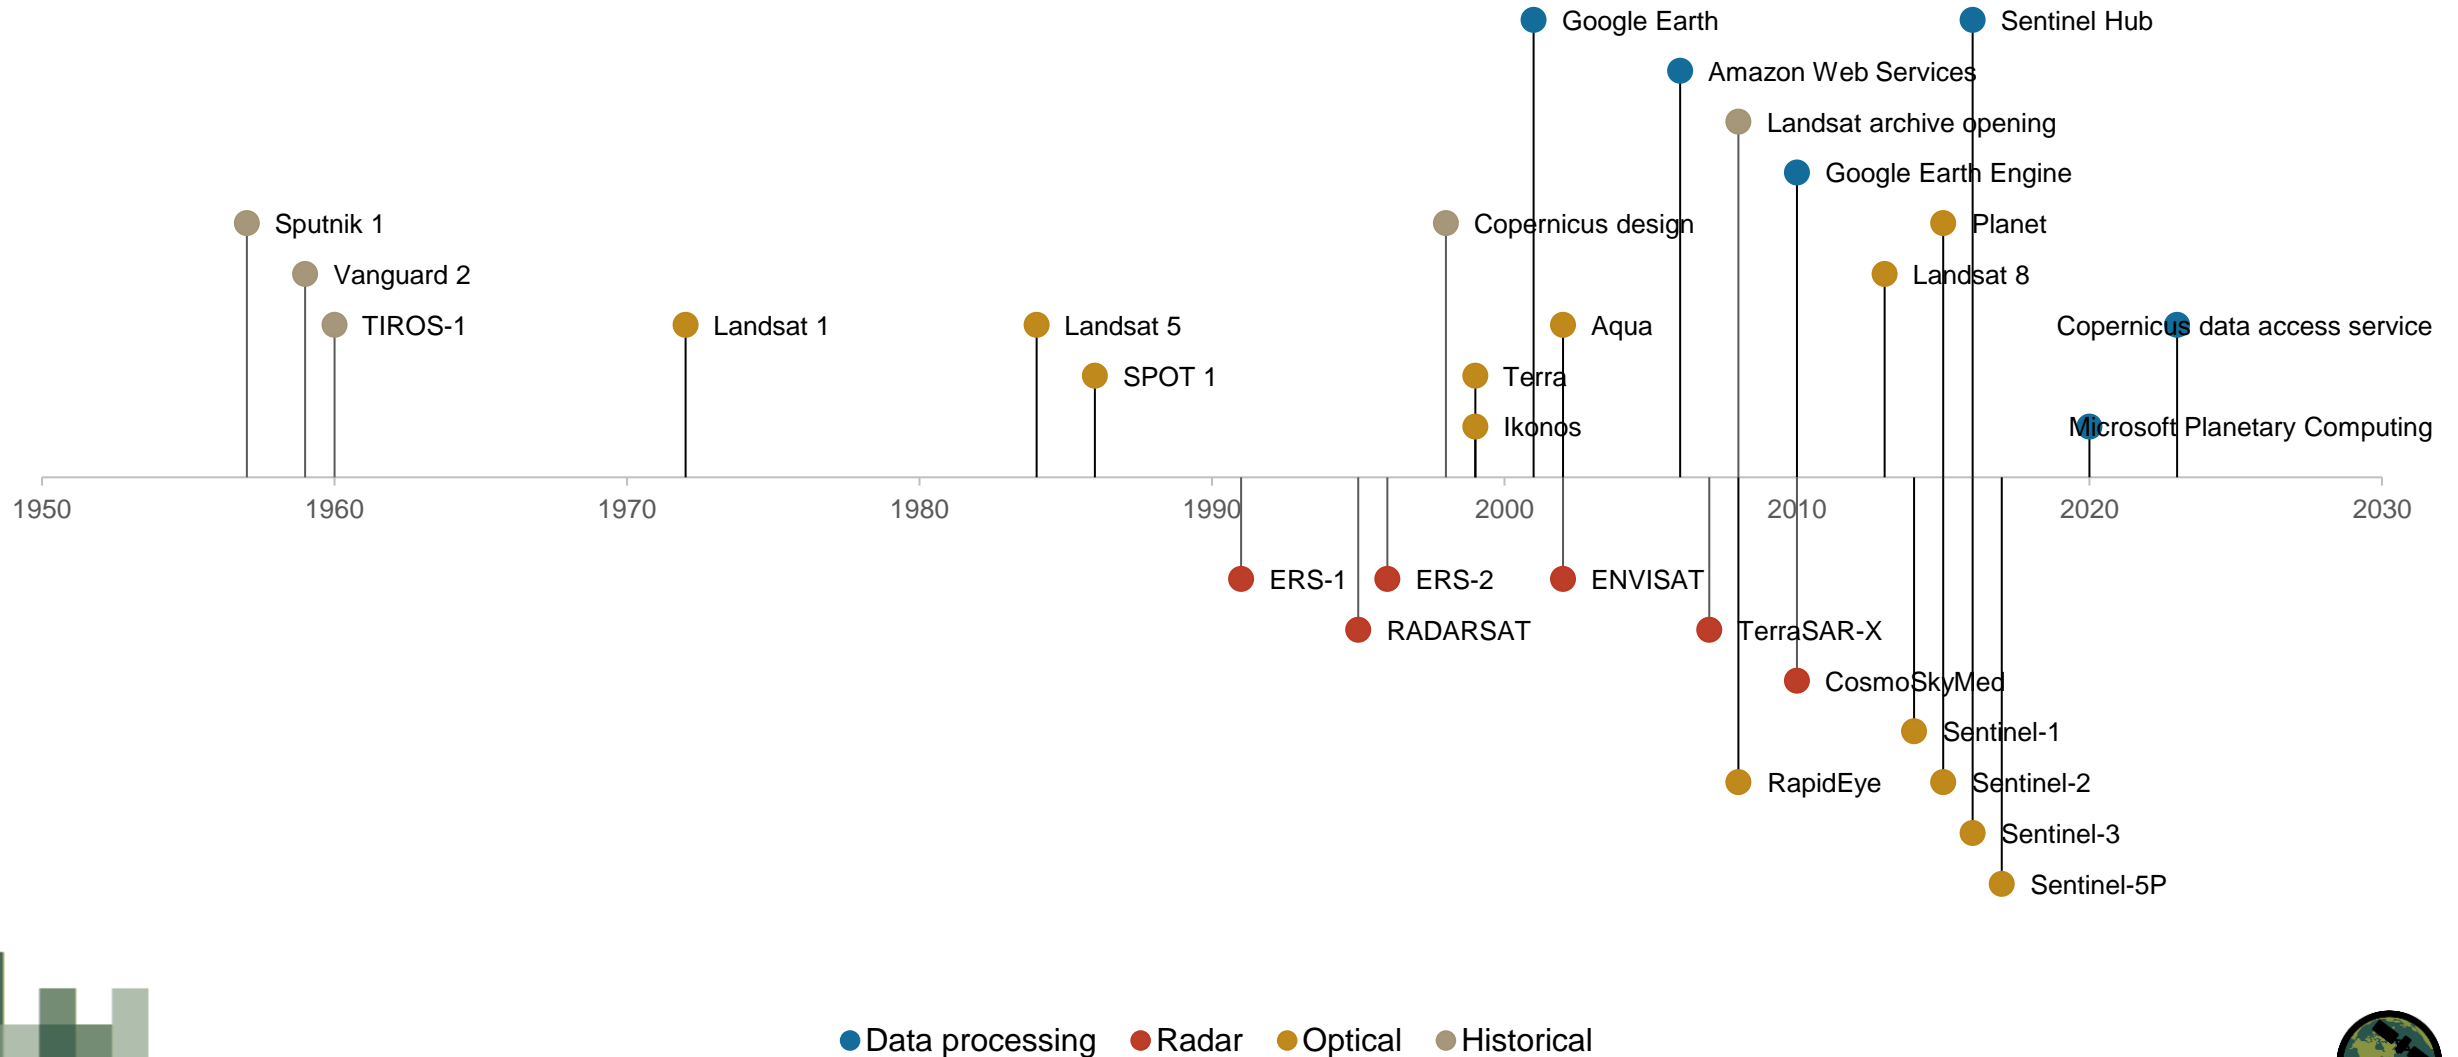

SUSTAINABLE DEVELOPMENT GOALS

[Space4SDGs: How space can be used in support of the 2030 Agenda for Sustainable Development \(unoosa.org\)](https://www.unoosa.org/)

Major Milestones

Long and dense time series

Satellite Image Time Series – SITS

- Medium and high-resolution data is freely available
- Landsat archive – 2008
- Copernicus – complete, free and open

- Long SITS
 - 1972 –
- Dense SITS
 - weekly, daily
- Harmonized SITS
 - Landsat – Sentinel-2
 - Optical – radar
 - Sentinel-2 – Planet

Landsat SITS

- Landsat, 1972 –
- Thematic Mapper (TM), 1982 –
- Operational Land Imager (OLI), 2013 –
- Every 16 day
- Optical → clouds

Sentinel Satellites

	S1A/B: Radar observations	2014 2016–2021
	S2A/B: High-resolution optical observation	2015 2017
	S3A/B: resolution imaging and altimetry	2016 2018
	S4A/B: Observation of the atmosphere from the geostationary orbit	2022
	S5P: Observation of the atmosphere from low orbit - predecessor	2017
	S5A/B/C: Observation of the atmosphere from low orbit	2015 2017

Sentinel-1

- Sentinel-1A – 2014
- Sentinel-1B – 2016 – not working since 23.12.2021
- Observation of land, forests, water, soil and agriculture
 - Rapid mapping in case of natural disasters
 - Shipping traffic
 - Observing ice at sea
- C-SAR (C-band Synthetic Aperture Radar)
- Resolution: 250 km – 5 x 20 m
- InSAR

Sentinel-1

Sentinel-2

- Sentinel-2A – 2015
- Sentinel-2B – 2017
- Observation of land, vegetation, soil, water surfaces, coastal bands
 - Land cover detection and changes
 - Rapid mapping in case of natural disasters
 - Climate change observation
- Orbit repeatability 10 days, 5 days with two satellites
- MSI (Multispectral Imager)
- Resolution: 290 km – 10 m, 20 m, and 60 m

Sentinel-2

Band Number	S2A		S2B		Spatial resolution (m)
	Central wavelength (nm)	Bandwidth (nm)	Central wavelength (nm)	Bandwidth (nm)	
1	442.7	20	442.3	20	60
2	492.7	65	492.3	65	10

Sentinel-2 Archive

Time Series Generation

Time Series

- Set of satellite images taken over the same area of interest at different times
- Same or multiple sensors
- Time Series:
 - understanding how Earth is changing
 - determining the causes of these changes
 - predicting future changes
 - discriminating features

[Land Cover Classification with eo-learn: Part 2 | by Matic Lubej | Sentinel Hub Blog | Medium](#)

Time Series - Sentinel-2

8, 4, 3

NDVI

Time Series – Sentinel-1

VH

VV

Analysis Ready Data (ARD)

- CEOS – Committee on Earth Observation Satellites:
 - Analysis Ready Data (ARD) are satellite data that have been processed to a minimum set of requirements and organized into a form that allows immediate analysis with a minimum of additional user effort and interoperability both through time and with other datasets.
- Data which is ready to use.

[CEOS Analysis Ready Data](#)

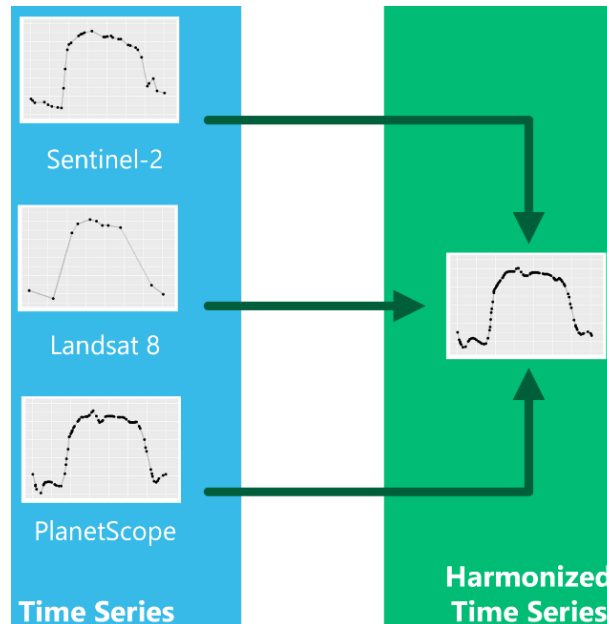

[Analysis Ready Data Defined. Cloud Native Geoprocessing Part 2 | by Chris Holmes | Planet Stories | Medium](#)

[Harness the power of Sentinel Hub, xcube, EOxHub, GeoDB and more in Euro Data Cube | by Dorothy Rono | Euro Data Cube | Medium](#)

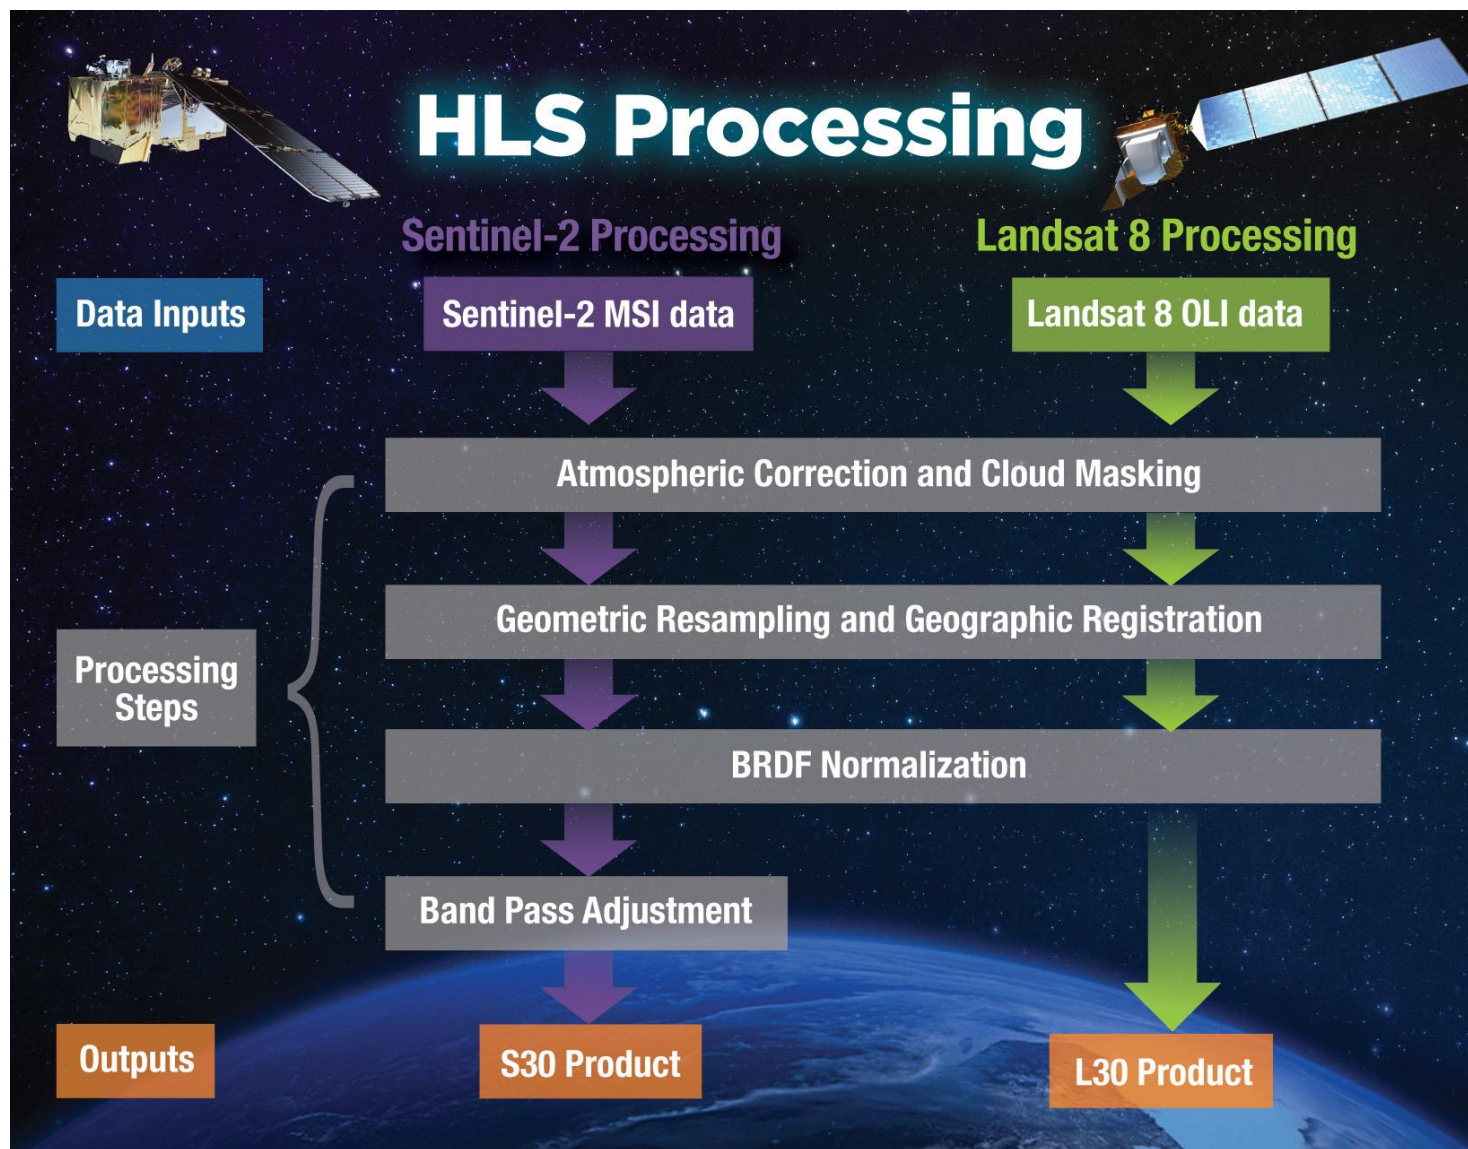

Analysis Ready Data (ARD)

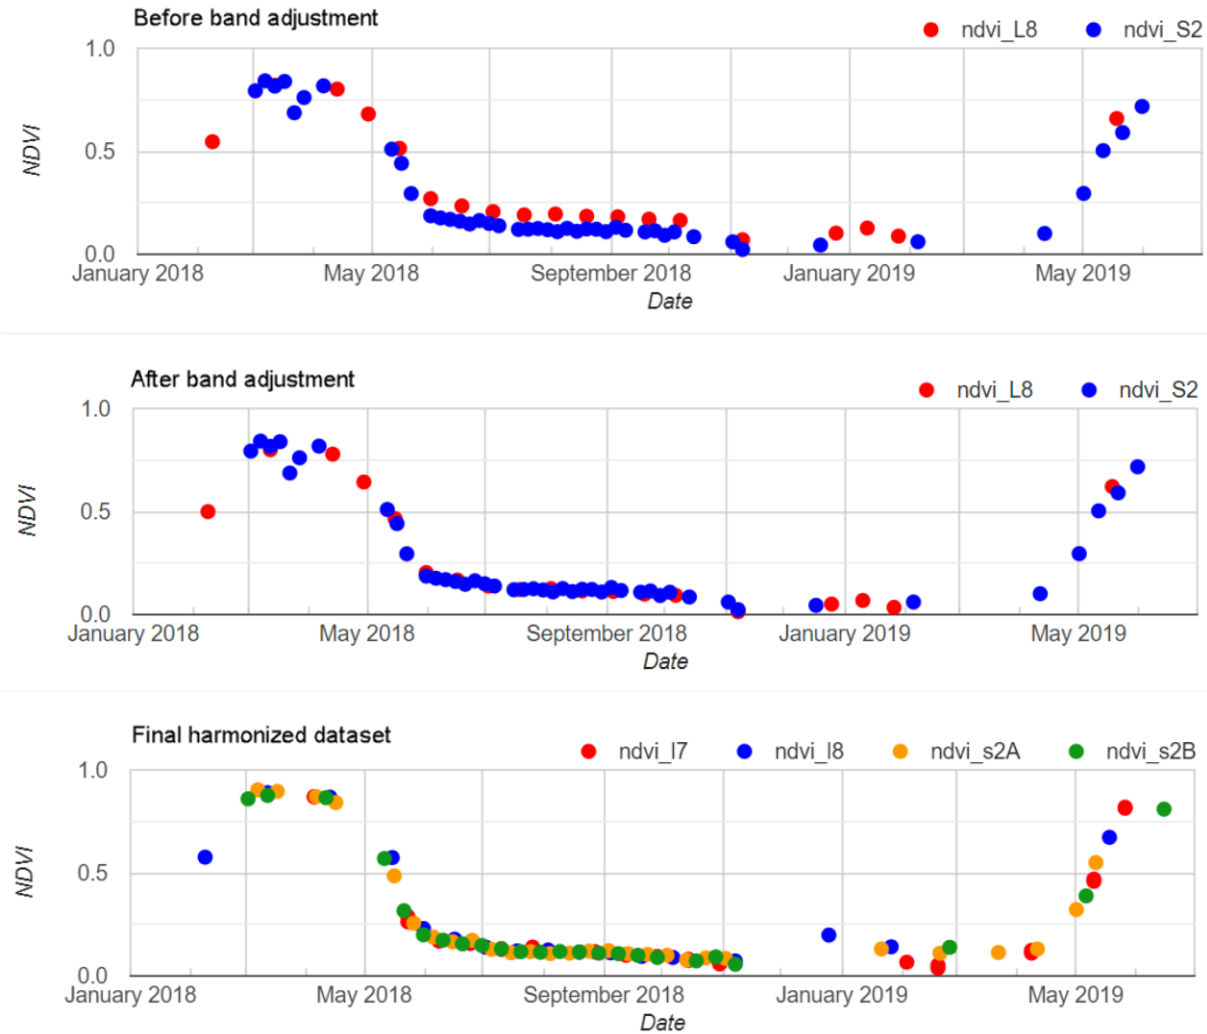

- ARD processing may differ between applications.
- Image clipping
- Masking – Usable/Unusable Data Masks
- Atmospheric Correction
- Pixel Alignment
- Sensor Alignment

Harmonization of the Time Series

Sentinel-2 – Landsat 7,8 – harmonization

Vegetation on optical and radar images

Vegetation Spectra – optical

- Certain wavelengths are sensitive to certain chemicals and compounds.
- They result in absorption characteristics.
- Make measurements in relation to these compounds.
- Indices make use of these wavelength features.

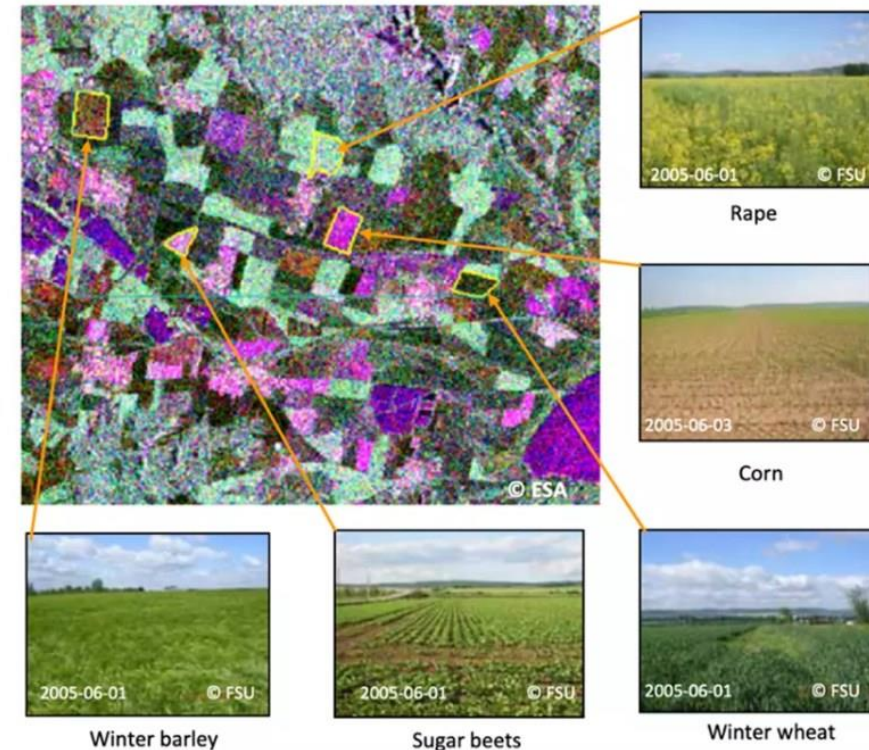

Radar backscattering

- Wavelength/frequency
- Polarization (horizontal, vertical)
- Incidence angle
- Resolution

Radar

- Structure of the observed phenomenon
- Roughness (roughness) of the terrain
- The conductivity and dielectricity of the surface
- Orientation

Surface

Radar Interferometry

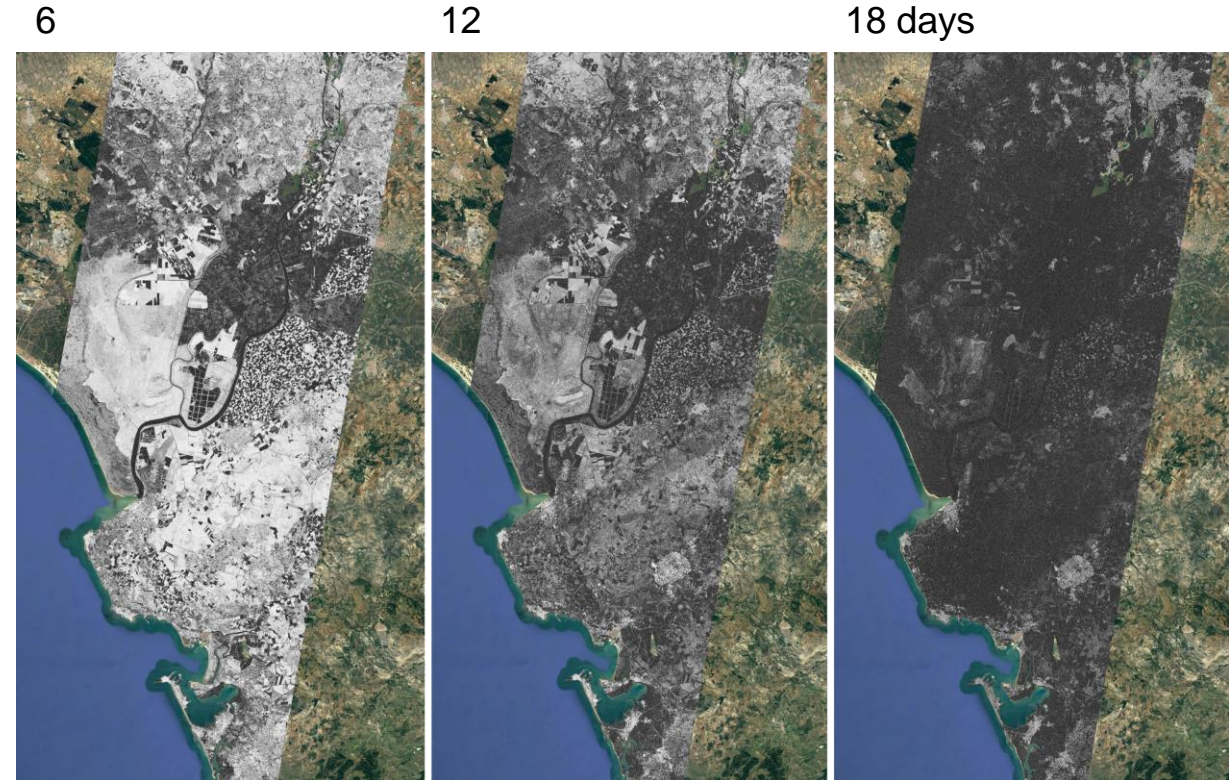

- Two images from slightly displaced orbits
- Phase differences due to
 - Parallax
 - Elevation differences
 - Surface movements
 - Atmospheric phenomena
- Elevations in m
- Displacements in mm
- Coherence

Coherence for Vegetation Mapping

- The coherence of an InSAR data pair represents the magnitude of the complex correlation between two SAR images on a pixel-by-pixel basis.
- Is a quantitative measure of the amount of noise in the interferogram.

Is NDVI enough?

Vegetation Indices

- VI - Vegetation Index
- NDVI - Normalized Difference Vegetation Index
- EVI - Enhanced Vegetation Index
- SAVI - Soil Adjusted NDVI
- AVI - Advanced Vegetation Index
- NDMI - Normalized Difference Moisture Index ...

[IDB - Index DataBase](#)

IDB - Agriculture

Sep

Oct

Nov

Time series classification

- Quasi time series classification
 - Images are attributes
 - Multidimensional classification, time sequence not considered
- Full time series classification
 - uses information about the development

Euclidean distance

Dynamic time warping

Classification based on time series

Time Interpolation/Aggregation

- No
- 5 D
- 10 D
- 1 M

Time synchronization

- Time series have different timestamps
- Time of image acquisition
 - Clouds
 - Different satellites
 - Different sensors
- Synchronize to the same timestamps
 - Week
 - 10 days
 - Month

Time synchronization

How long must the time series be

- Yearly vegetation cycle
- Multiyear
 - Disturbances
- Beginning of the year

How long must the time series be

Sentinel Hub

Copernicus Data Space Ecosystem

ROADMAP

What can you expect?

The Copernicus Data Space Ecosystem will be continuously upgraded over the upcoming months. All data and services will be available by July 2023.

January 2023

- Release Copernicus Data Space Ecosystem
- Start of user registration
- Initial Sentinel data offering
- Browser
- Catalogue APIs: OData and OpenSearch

April 2023

- Catalogue API: STAC, S3
- Processing API: Sentinel Hub and OGC for supported collections
- Traceability API
- On-demand production API

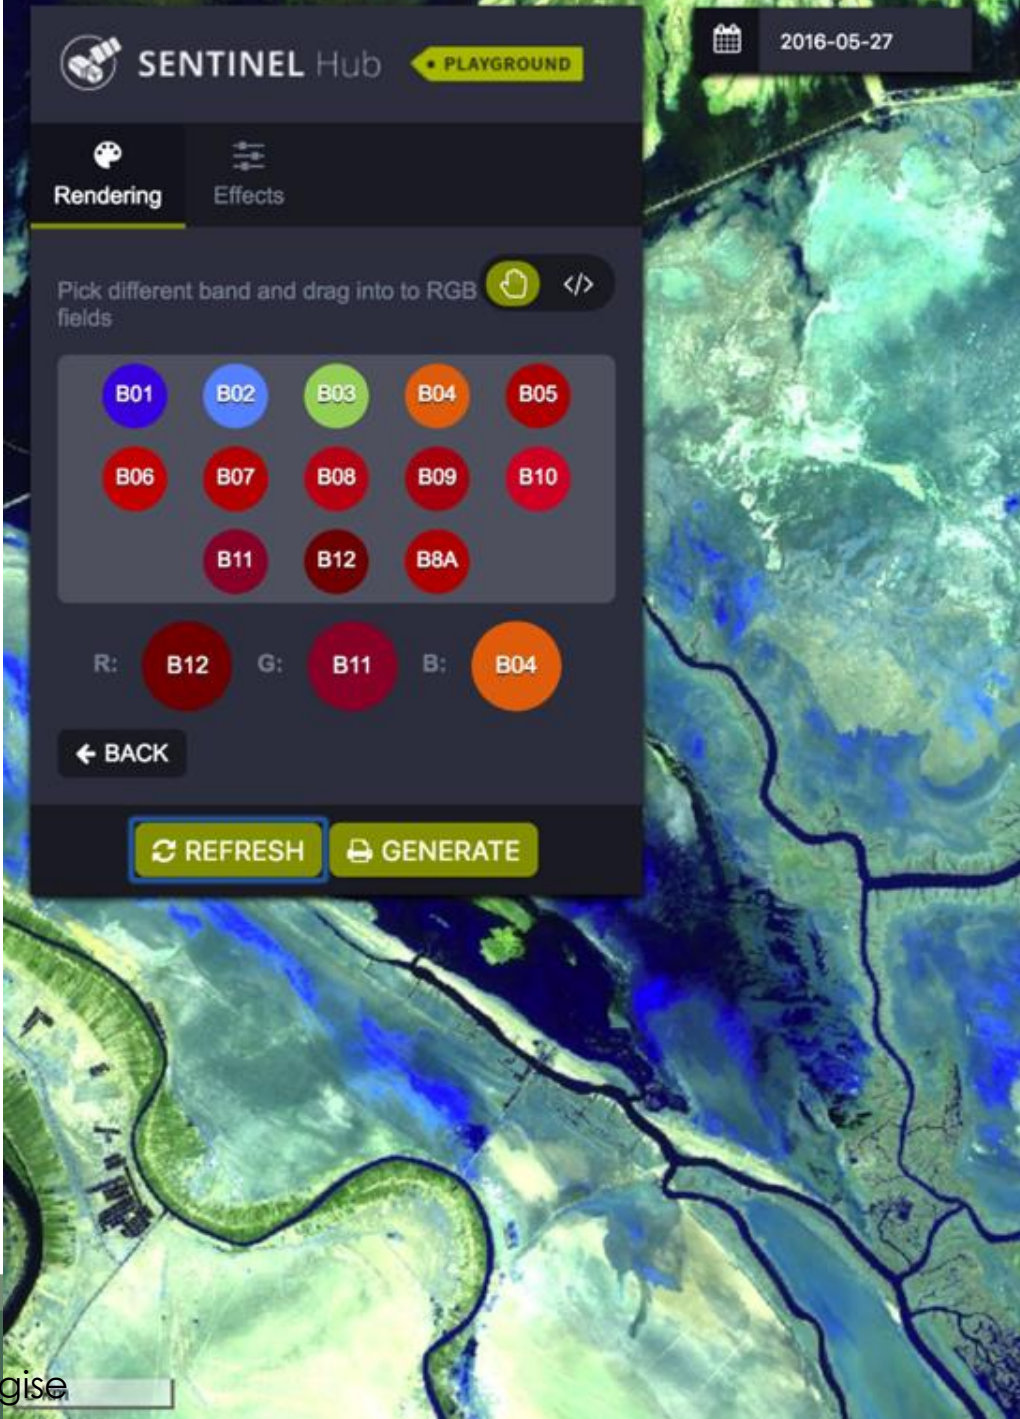

01 July 2023

- Full archive of Sentinel missions
- Complementary open datasets
- Access to commercial data
- Processing API: extended Sentinel Hub APIs, OpenEO
- Jupyter Lab
- Marketplace

November 2023

- Sentinel engineering and auxiliary data
- Copernicus Contributing Missions
- Streamlined data access of federated data sets

 - Copernicus Services
 - Proba-V
 - GIBS
 - Planet NICFI
 - Other
- Time range [UTC]:** 2021-01-01 to 2021-12-31, with a "filter by months" option.
- Search:** A prominent yellow search button.
- Footer:** "Powered by Sentinel Hub with contributions by ESA v3.38.0"

The main map area shows a satellite view of a rural landscape with fields, roads, and buildings. The right sidebar contains various map controls like zoom, pan, and 3D view. The bottom status bar shows the current location (Lat: 45.75209, Lng: 14.40130) and a 500m scale bar.

EO Browser

The screenshot displays the EO Browser interface. At the top left, the logo and name 'EO Browser' are visible, along with a language dropdown set to 'ENGLISH' and a user greeting 'Hello, Kristof Ostir'. Below this is a navigation bar with 'Discover', 'Visualize', 'Compare', and 'Pins' options. A search bar contains the text 'Go to Place'. The main content area shows a list of search results, each featuring a satellite image thumbnail, the text 'Sentinel-2 L2A', a date, a time (10:08:02 UTC), a cloud cover percentage, and a '33TVL' label. A yellow 'Visualize' button is present for each result. The fifth result's 'Visualize' button is highlighted with a red rectangular box. On the right side, a vertical toolbar contains icons for home, location, edit, layers, 3D, and a legend. At the bottom, there are links for 'About EO Browser', 'Contact us', and 'Get data', along with coordinates 'Lat: 45.77874, Lng: 14.44147' and a scale of '500 m'.

EO Browser

EO Browser

EO Browser

The screenshot displays the EO Browser interface. On the left, a sidebar contains the following elements:

- EO Browser logo and language selection (ENGLISH).
- Navigation tabs: Discover, Visualize, Compare, Pins.
- Dataset: Sentinel-2 L2A, with a Show L1C button.
- Date: 2021-10-17, with a Timespan selector.
- Visualization options:
 - True color (Based on bands 4,3,2)
 - False color (Based on bands 8,4,3)
 - Highlight Optimized Natural Color (Enhanced natural color visualization)
 - NDVI (Based on combination of bands $(B8 - B4)/(B8 + B4)$)
 - False color (urban) (Based on bands 12,11,4)
 - Moisture index (Based on combination of bands $(B8A - B11)/(B8A + B11)$)
 - SWIR (Based on bands 12,8A,4)
 - NDWI (Based on combination of bands $(B3 - B8)/(B3 + B8)$)
 - NDSI

The main map area shows a satellite view of a rural region with various village names labeled, including Otonica, Hribarjevo, Sveta Trojica, Mramorovo, Sleme, Škufče, Lahovo, Ulaka, Velike Bloke, Kramplje, Godičevo, Mramorovo pri L..., Bloke, Nemška vas na Blokah, Studeno na Blokah, Grahovo, Glina, Nova vas, Veliki Vrh, Runarsko, Studenec na Blokah, Bločice, Bloška Polica, Hudi Vrh, Žerovnica, Lipsenj, Fara, Topol, Ravne na Blokah, Goričice, Podlož, Metulje, Gorenje Jezero, Lož, Klance, and Knežja Njiva. A yellow location pin is placed on the map.

On the right side, there is a vertical toolbar with icons for:

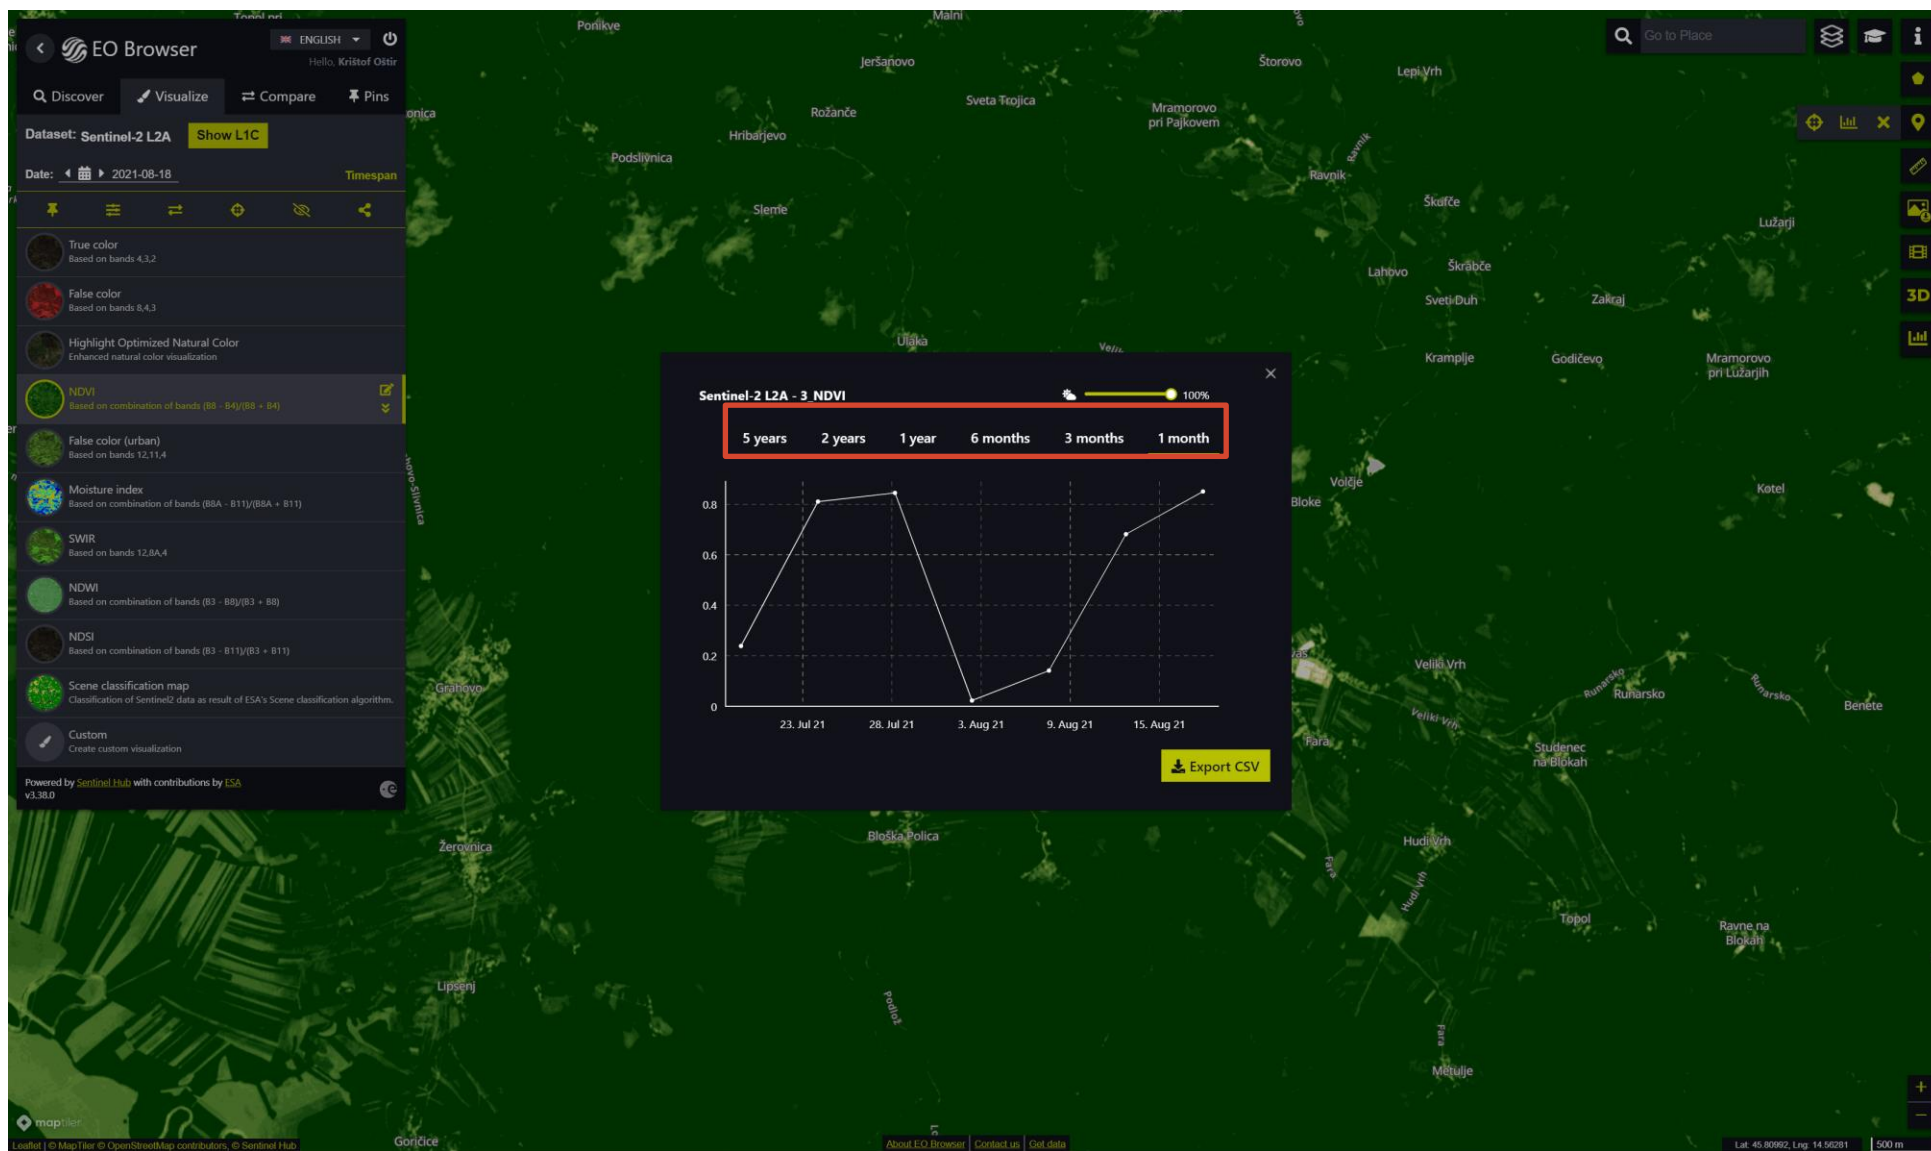

- Layers
- Help
- Information
- Home
- Full Screen
- 3D View
- Measurement
- Download
- Share
- Zoom In (+)
- Zoom Out (-)

At the bottom, the interface shows:

- Powered by Sentinel Hub with contributions by ESA v3.36.0
- Footer links: About EO Browser, Contact us, Get data
- Coordinates: Lat: 45.79625, Lng: 14.53923

Radar and optical Integration

SAR/Optical Integration

Radar backscatter

NDVI and NDRE

Mapping Grassland – Intensive/Extensive

Optical (NDVI) and radar (coherence) data

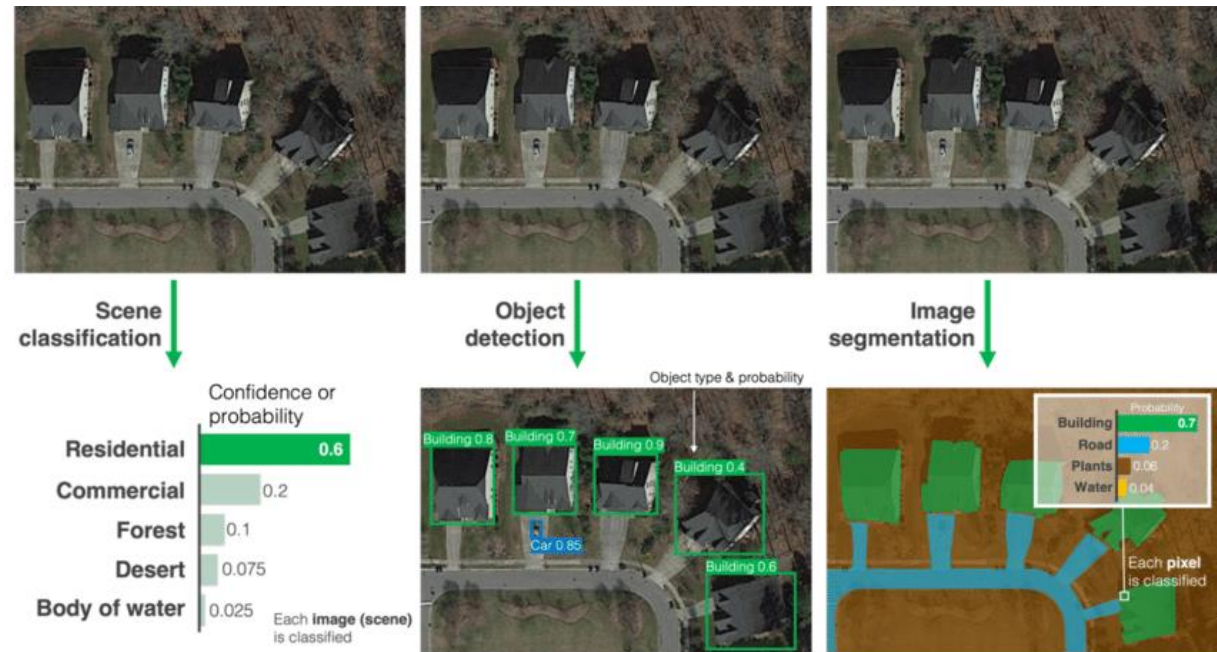

[Sen4Cap \(esa-sen4cap.org\)](http://esa-sen4cap.org)

Machine learning

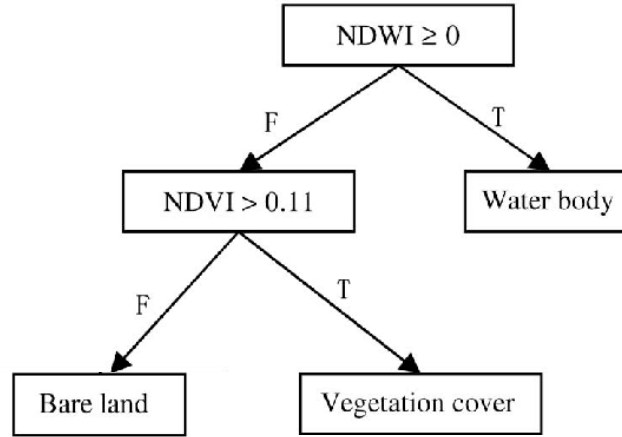

- Scene classification
- Object detection
- Segmentation
- Pixel classification

Machine learning – satellite image time series

- Machine learning
 - Decision trees
 - Random Forest
 - LightGBM
- Deep learning
 - RNN
 - CNN
 - Transformers

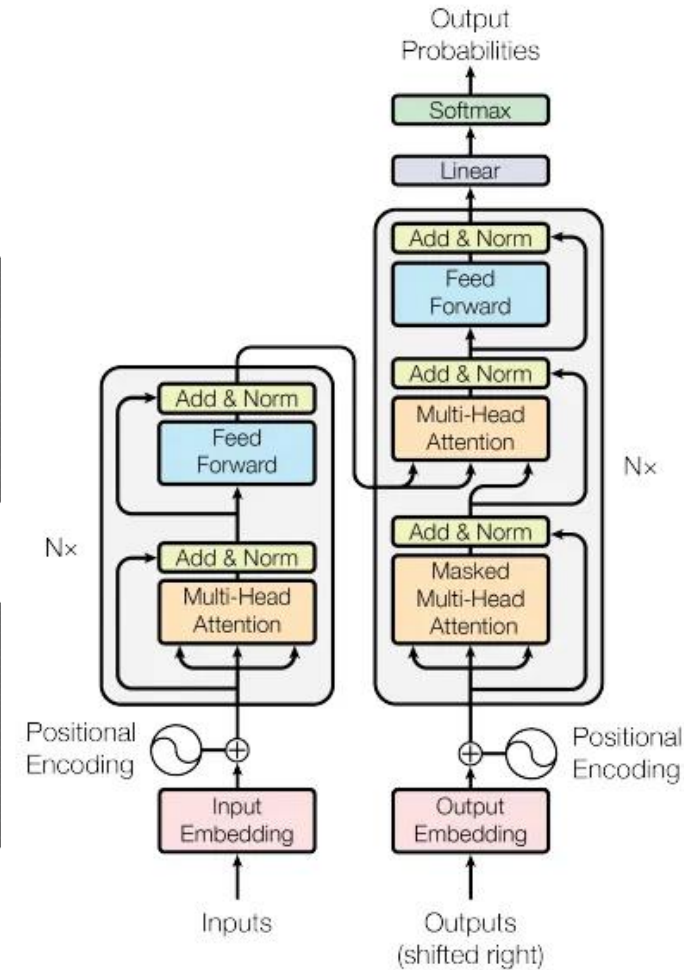

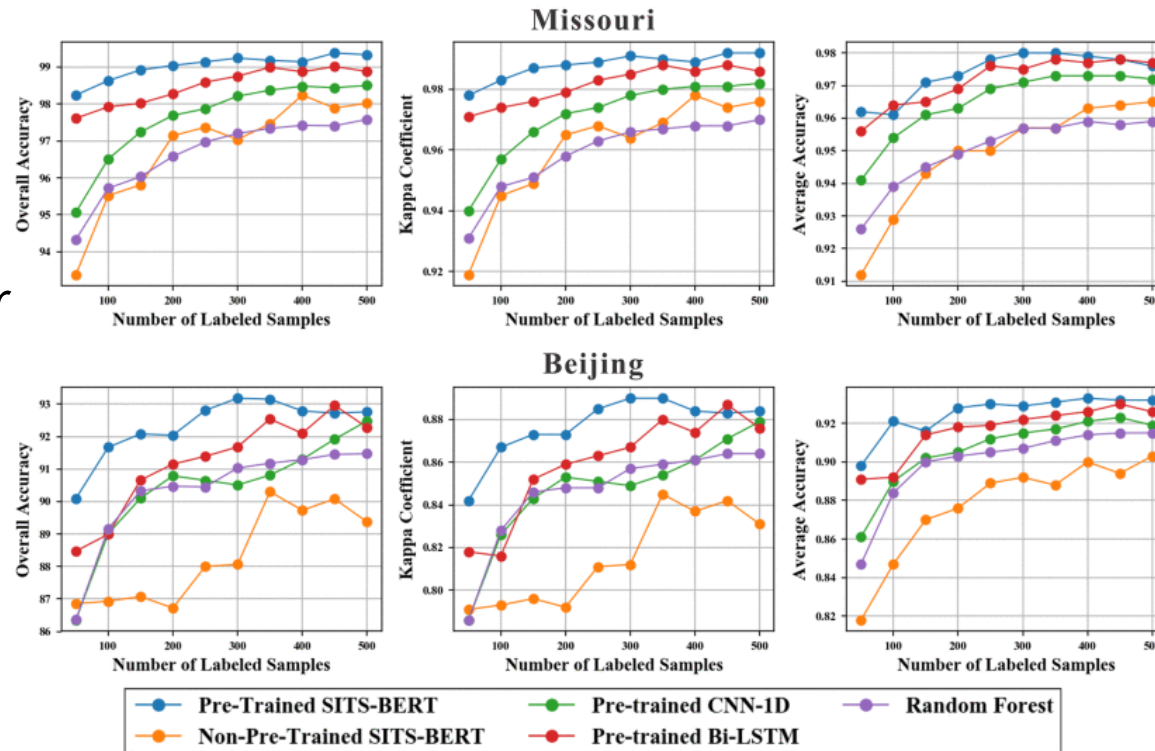

[A Decision-Tree Classifier for Extracting Transparent Plastic-Mulched Landcover from Landsat-5 TM Images](#)
[Temporal Convolutional Neural Network for the Classification of Satellite Image Time Series](#)

Transformers – Satellite image time series

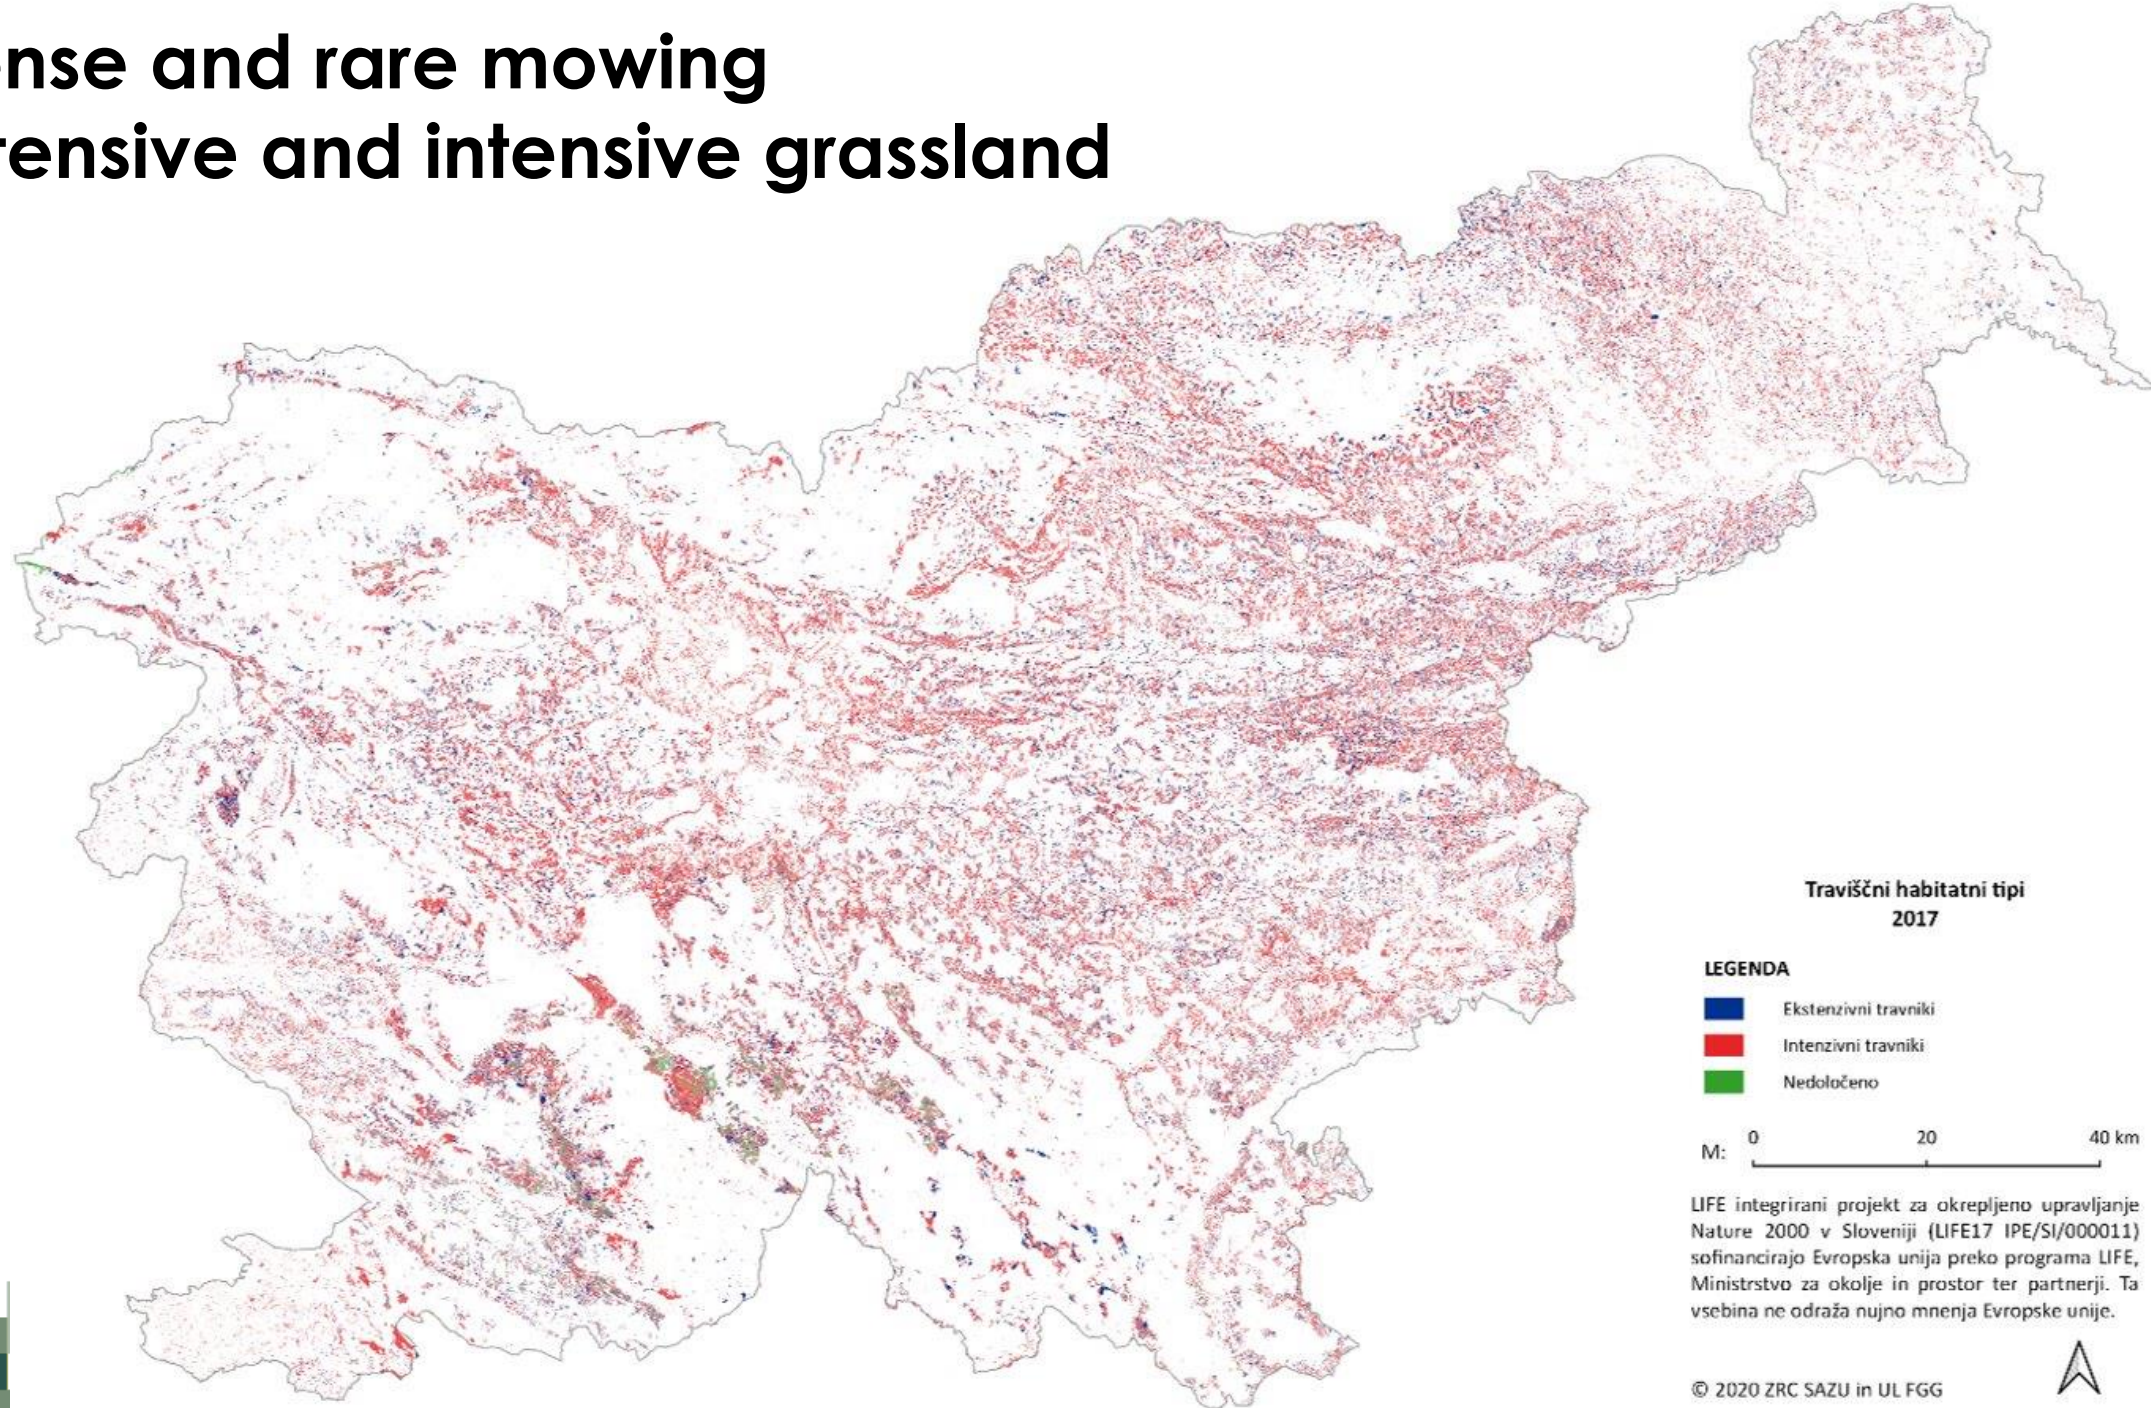

- Pre-processing is not mandatory but can improve results
- Models can infer:
 - Interpolation
 - Cloud mask
- Knowledge transfer
 - Domain
 - Year
 - Season

Dense and rare mowing Extensive and intensive grassland

LIFE integrirani projekt za okrepljeno upravljanje Nature 2000 v Sloveniji (LIFE17 IPE/SI/000011) sofinancirajo Evropska unija preko programa LIFE, Ministrstvo za okolje in prostor ter partnerji. Ta vsebina ne odraža nujno mnenja Evropske unije.

Extensive and intensive grassland – statistics

Practical

Credentials

1. INSTANCE_ID: Configuration Utility > Id
2. CLIENT ID: User settings > Oauth clients > ID (Client credentials)
3. CLIENT_SECRET: „secret“

The screenshot displays the SentinelHub Configuration Utility interface. The main area shows a table of configurations with columns for Edit, Name, Id, and Configuration date. A modal window titled "Configuration Utility > Add new configuration" is open, showing a form to create a new configuration. The form includes a text input for "Configuration name:" with the value "new python", a dropdown menu for "Create configuration based on:" set to "Python scripts template", and a "Create configuration" button.

Edit	Name	Id	Configuration
