

Introduction to ARSET program

Pawan Gupta

Satellite Remote Sensing of Air Quality, 18-19 November 2018

NASA's Applied Remote Sensing Training Program (ARSET)

<http://arset.gsfc.nasa.gov/>

- Empowering the global community through remote sensing training
- Part of NASA's Applied Sciences Capacity Building Program
- Goal: increase the use of Earth Science in decision-making through training for:
 - policy makers
 - environmental managers
 - other professionals in the public and private sector
- Trainings offered focusing on applications in:

Disasters
9 Trainings

Eco
12 Trainings

Health & Air Quality
55 Trainings

Water Resources
20 Trainings

ARSET Training Levels

Advanced Training, Level 2

- Online and in-person
- Requires Level 1 training or equivalent knowledge
- More in-depth or focused topics

Beginning Training, Level 1

- Online and in-person
- Requires Level 0 training or equivalent knowledge
- Specific applications

Fundamentals Training, Level 0

- Online only
- Assumes no prior knowledge of remote sensing

ARSET Training Impacts: Health & Air Quality (2008-2017)

Total ARSET Participants (2009-2017): 13,042

Health & Air Quality Participants
2,978

17 online trainings

75 countries

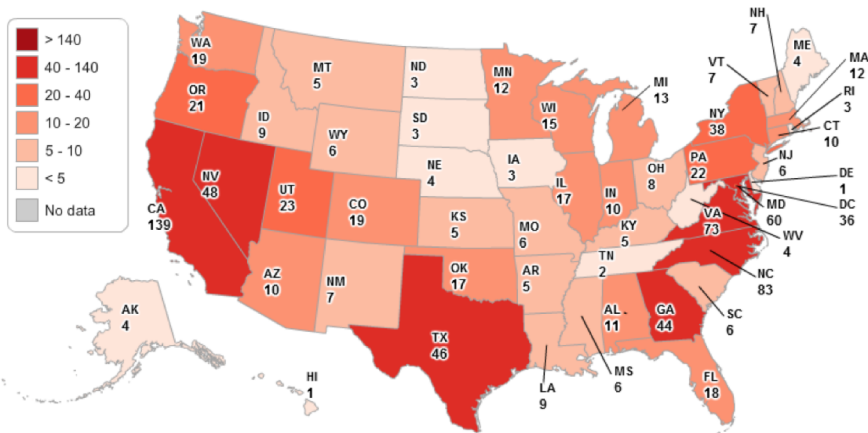

38 in-person trainings

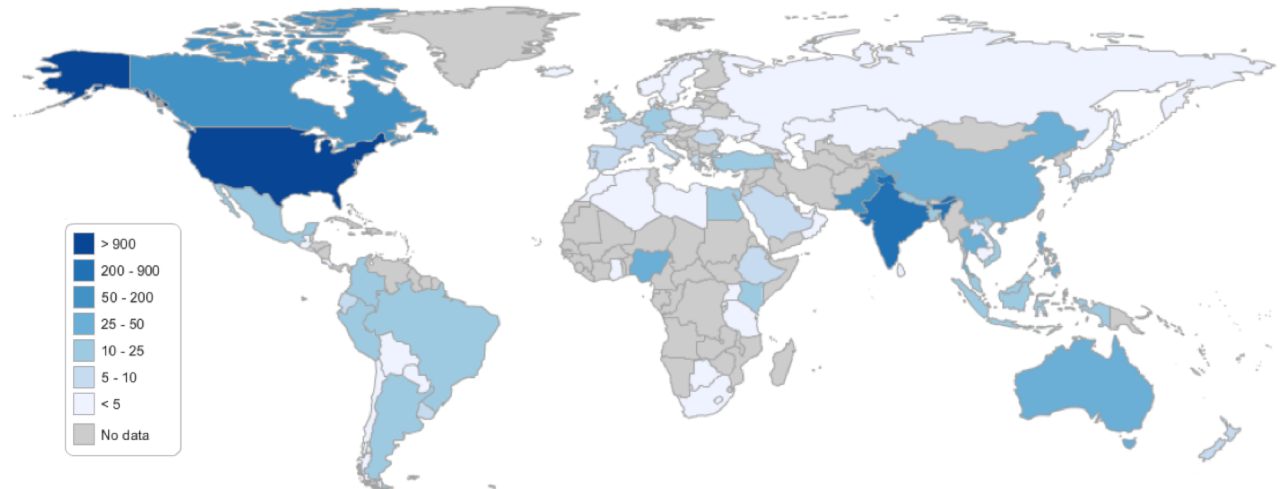

836 organizations

US Health & Air Quality Participants

Global Health & Air Quality Participants

ARSET Air Quality Trainings

Remote Sensing

Satellites

Imagery

Learn More About ARSET

<http://arset.gsfc.nasa.gov/>

The screenshot shows the ARSET website interface. At the top, there is a header with the NASA logo, the text "ARSET Applied Remote Sensing Training", and navigation links for "Earth Sciences Division", "Applied Sciences", and "ASP Water Resources". A search bar is located on the right side of the header. Below the header is a navigation menu with "Home", "About", and "Trainings" (which is expanded to show "Fundamentals", "Disasters", "Health & Air Quality", "Land", and "Water Resources"). The main content area features a large image of a satellite view of a coastal area with a greenish tint, overlaid with a dark box containing the text: "Introduction to Remote Sensing of Harmful Algal Blooms", "Tuesdays, Sep 5-26, 2017", "11:00-12:00 or 21:00-22:00 EDT (UTC-4)", and a "Register Now" button. To the right of the main content is a sidebar with a list of links: "ARSET", "Online Trainings", "In-Person Trainings", "Sign up for the Listserv" (highlighted with a red arrow), "Tools Covered", "Suggest a Training", "Personnel", and "Resources". Below the sidebar is a section titled "Upcoming Training" with a sub-section for "Water" and a link for "Satellite Observations of Water Quality for".

Introduction to Satellite Remote Sensing of Air Quality: An Overview

Pawan Gupta

Satellite Remote Sensing of Air Quality, 18-19 November 2018

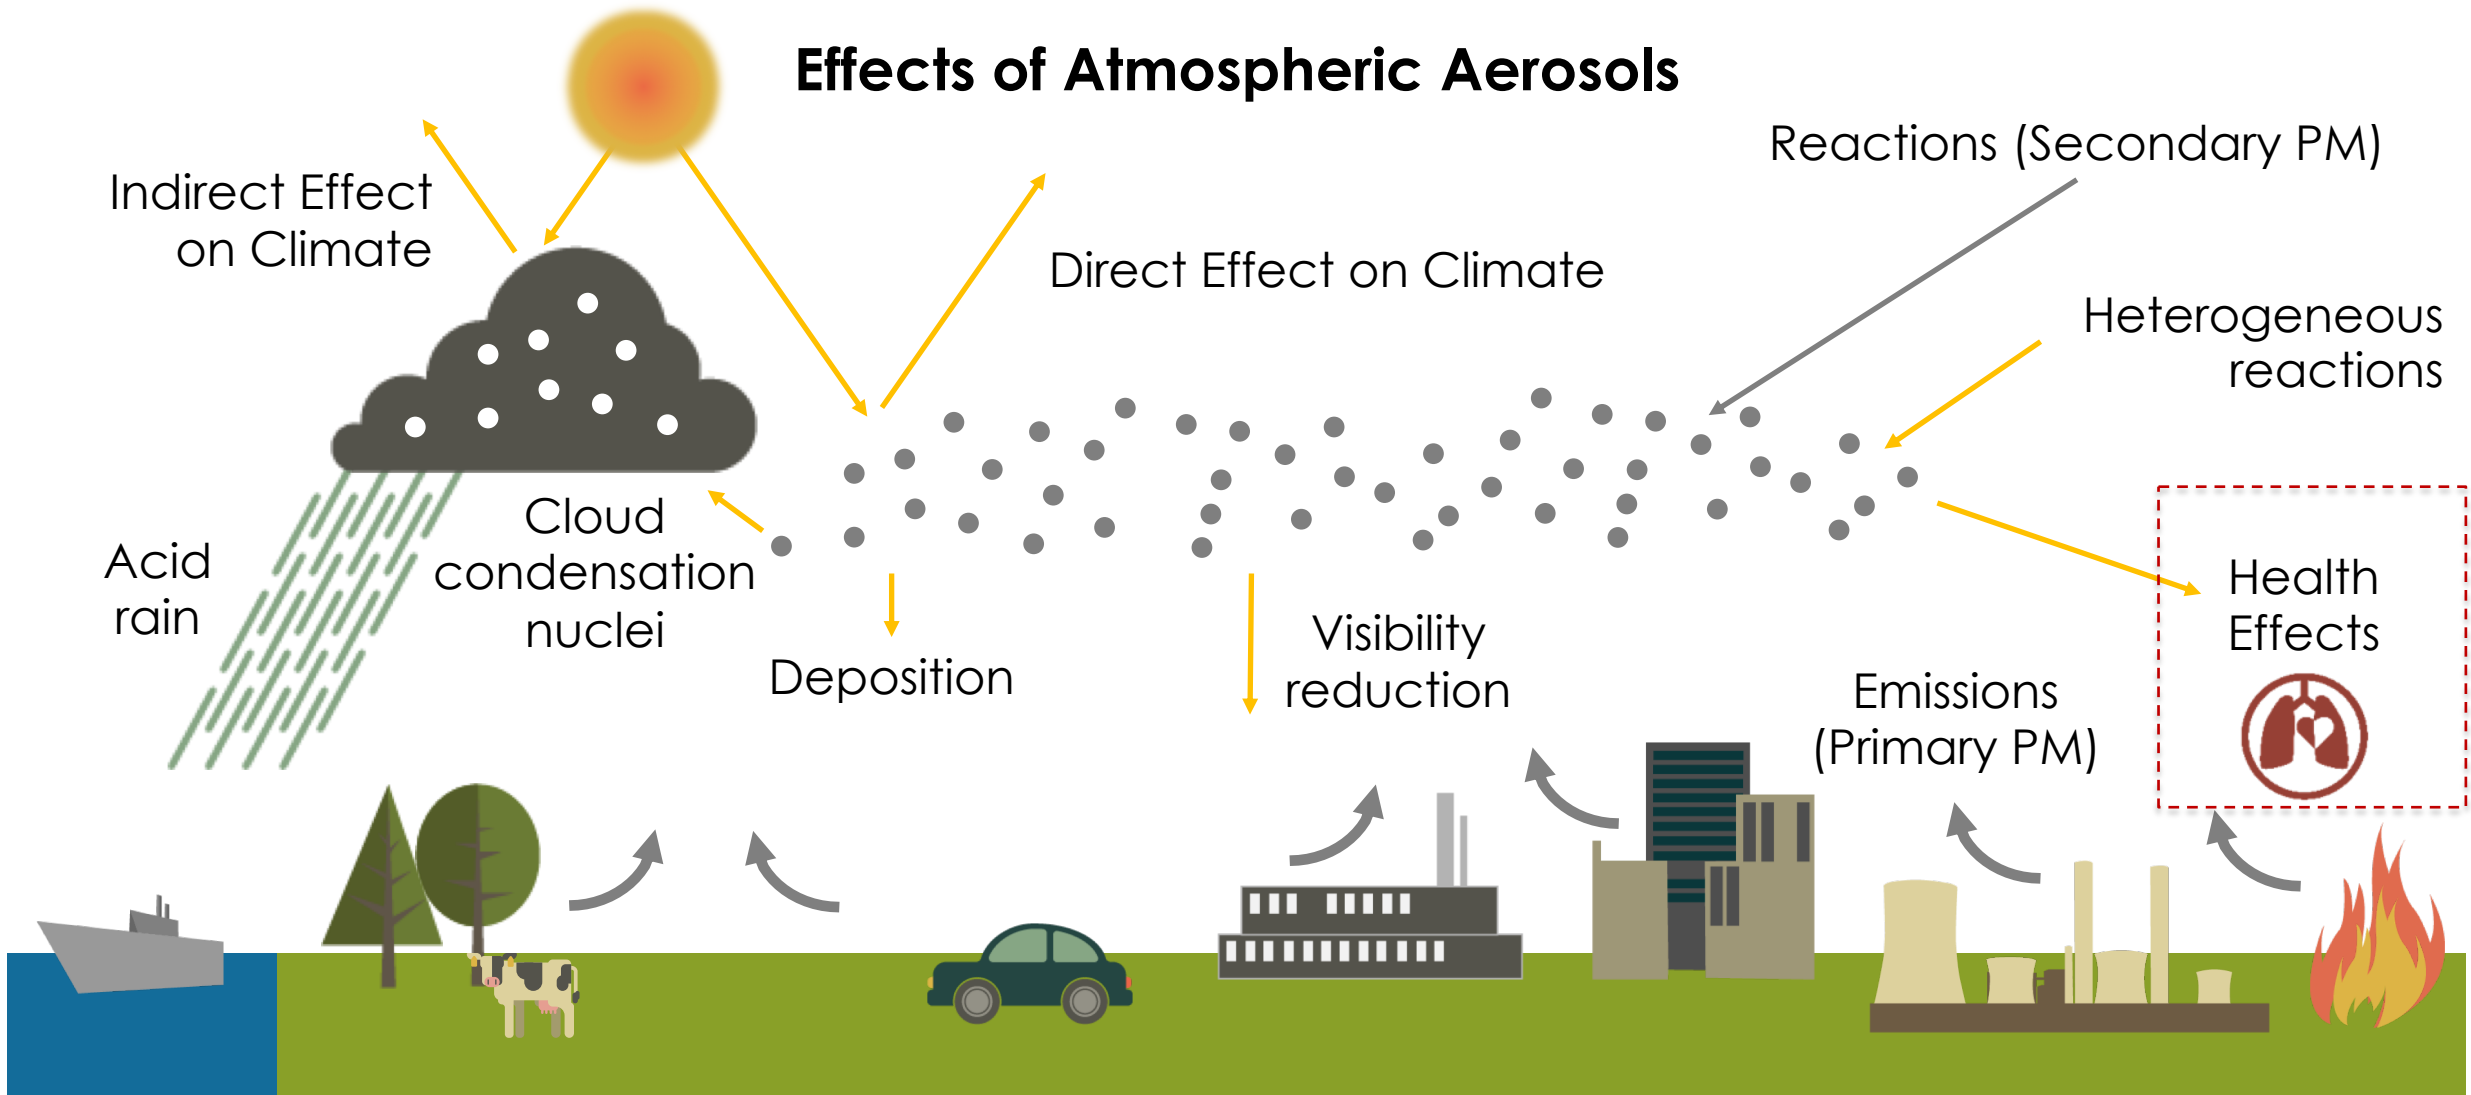

Learning Objectives

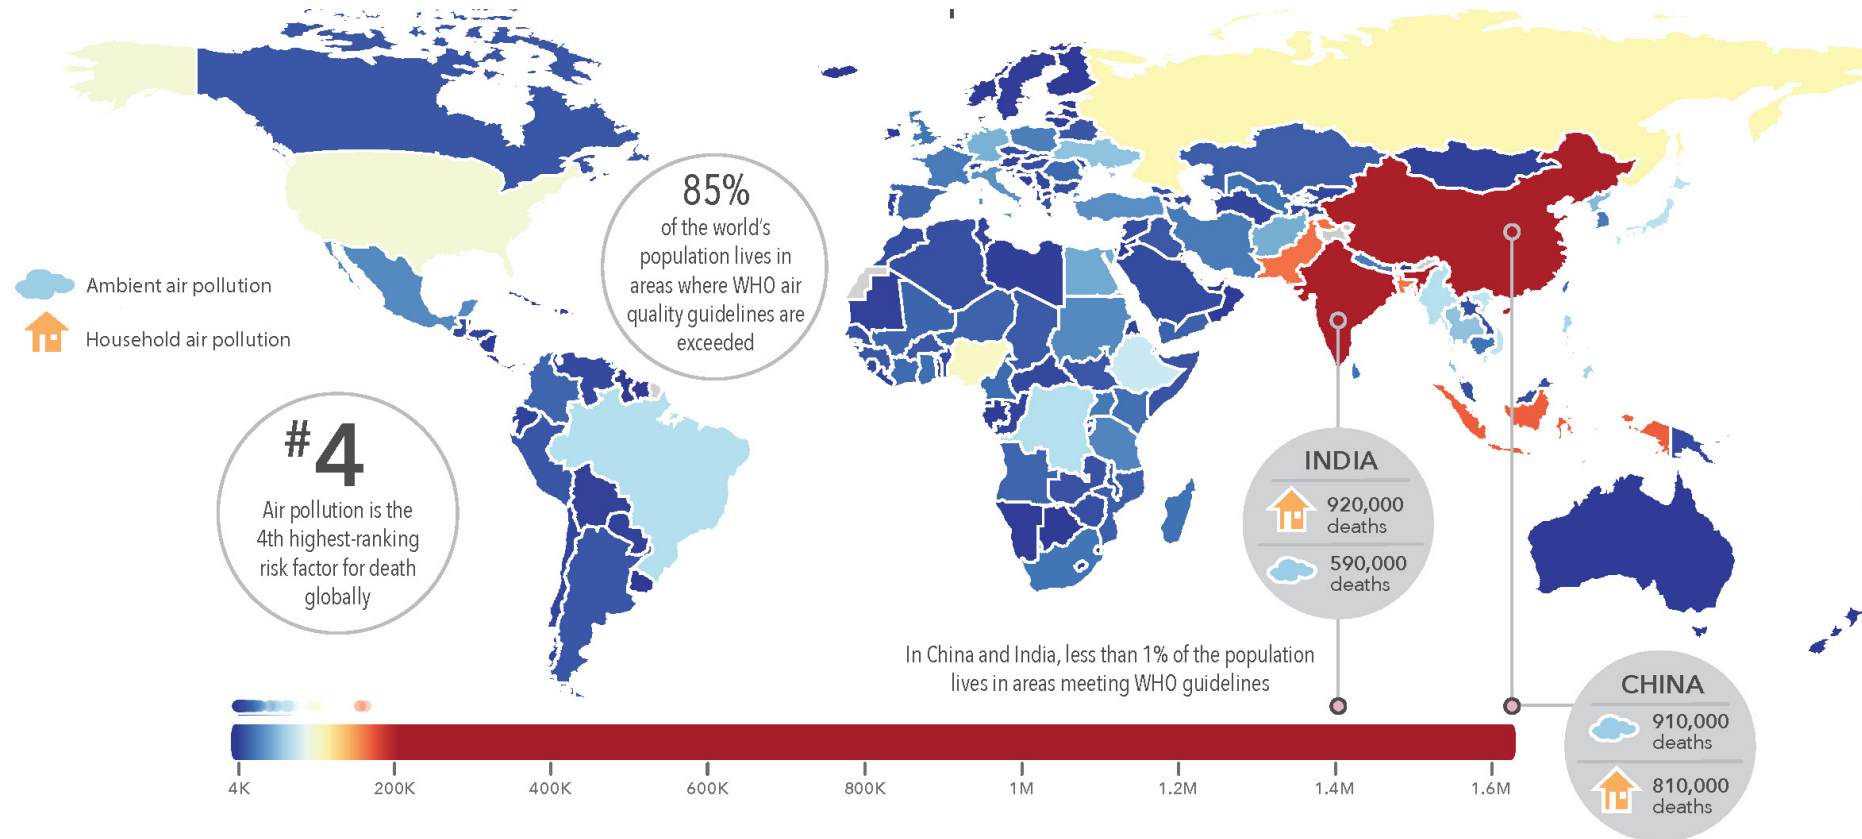

- By the end of this presentation, you will be able to:
 - describe existing satellite capabilities for global air quality monitoring
 - identify upcoming and future satellite missions for air quality monitoring

Motivation: Tiny, but Potent

Global Burden of Air Pollution

- Air pollution was responsible for 5.5 million deaths in 2013
- Satellite data can help quantify the impact on human health

Image Credit: <http://thelancet.com/gbd/2013>

UN Sustainable Development Goals (SDGs)

Transforming Our World: The 2030 Agenda for Sustainable Development

SUSTAINABLE DEVELOPMENT GOALS

- A plan of action for people, planet, and prosperity
- All countries and all stakeholders, acting in collaborative partnership, will implement this plan
- 17 SDGs and 169 targets under this agenda
- Balance the three dimensions of sustainable development:
 - economic, social, and **environmental**

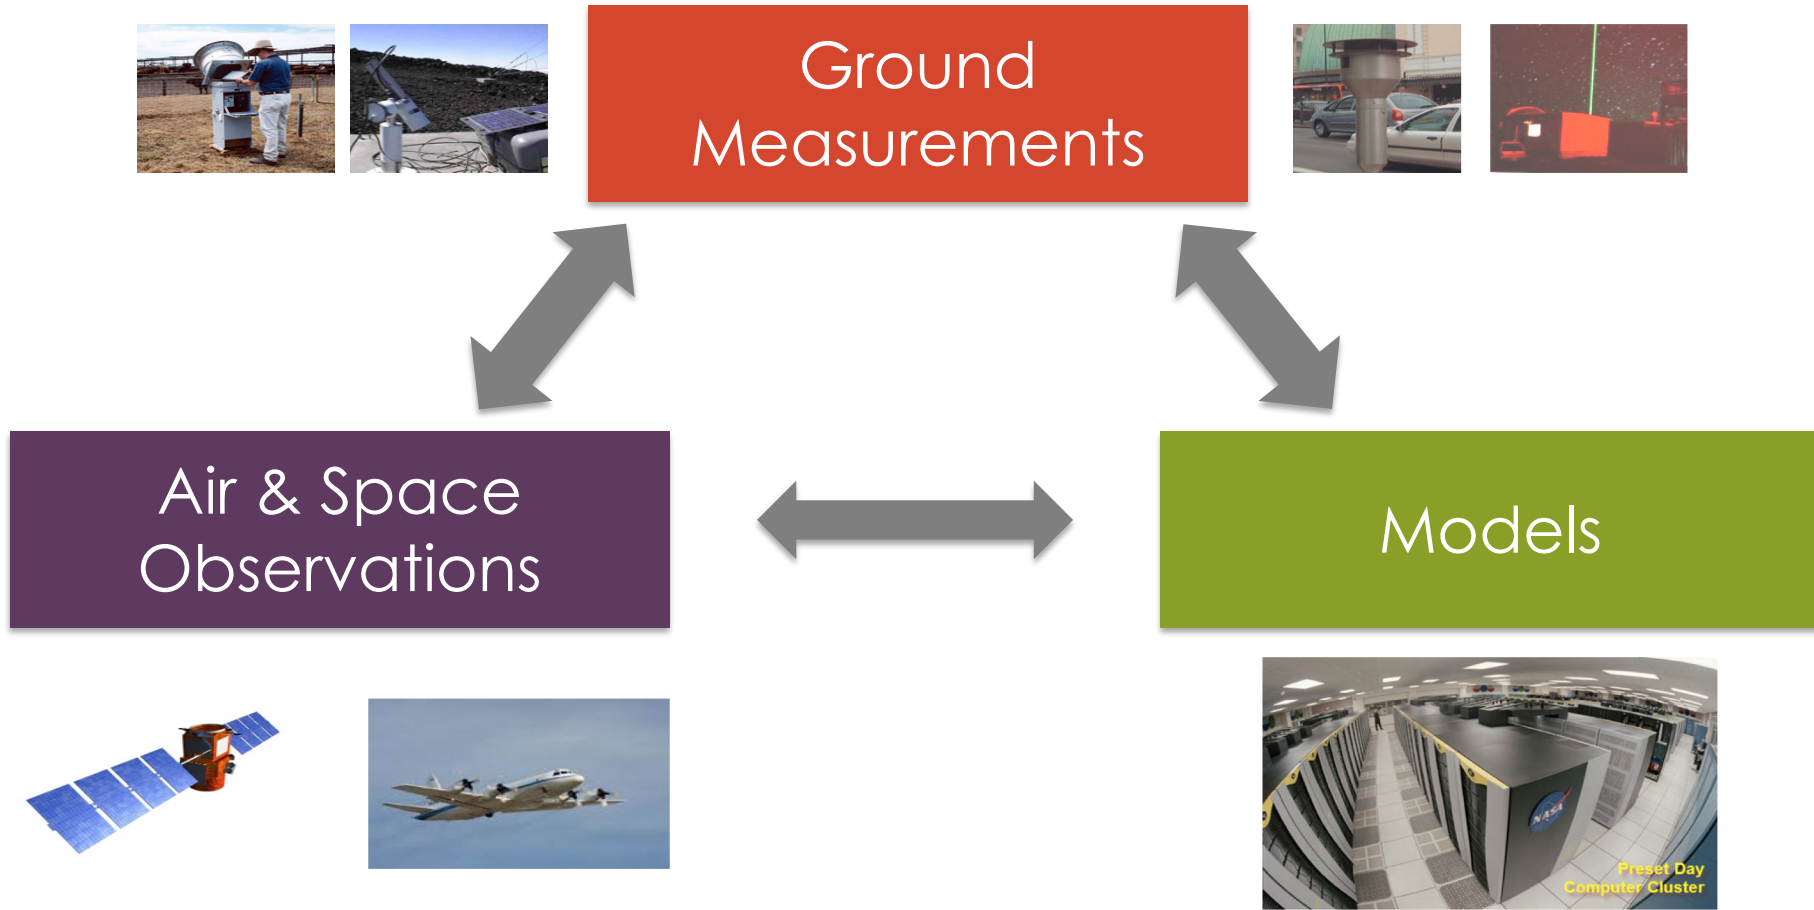

Text adapted from "[Transforming our world: the 2030 Agenda for Sustainable Development](#)"

Traditional Air Quality Monitoring

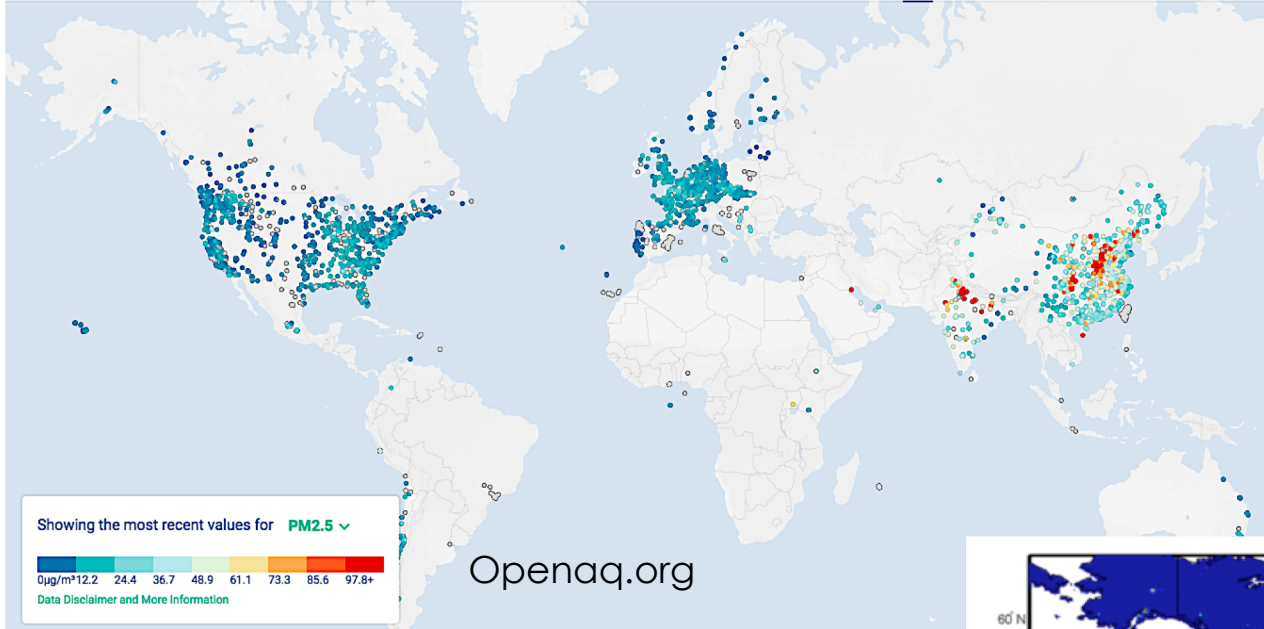

Air Pollution Monitoring

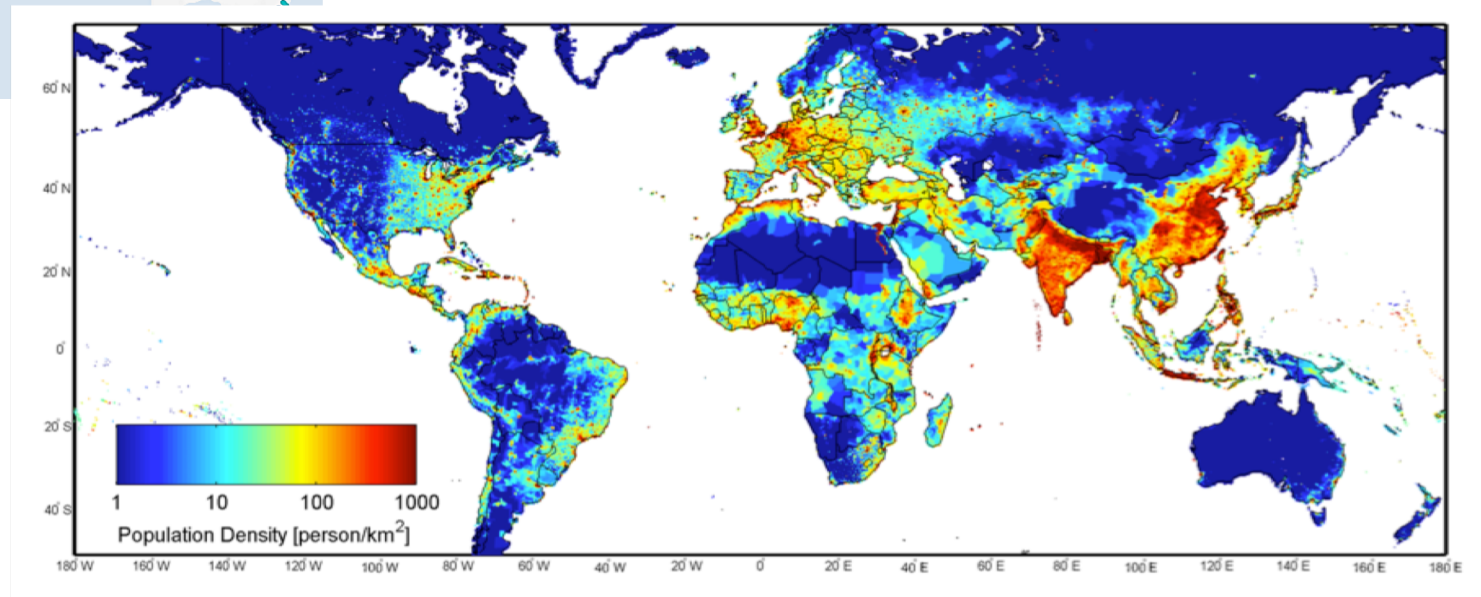

Why use satellite data?

Global Status of PM_{2.5} Monitoring

← Ground Sensor Network

Population Density →

“A Picture is Worth a Thousand Words”

A satellite picture is worth ~~a~~ **millions of data points**

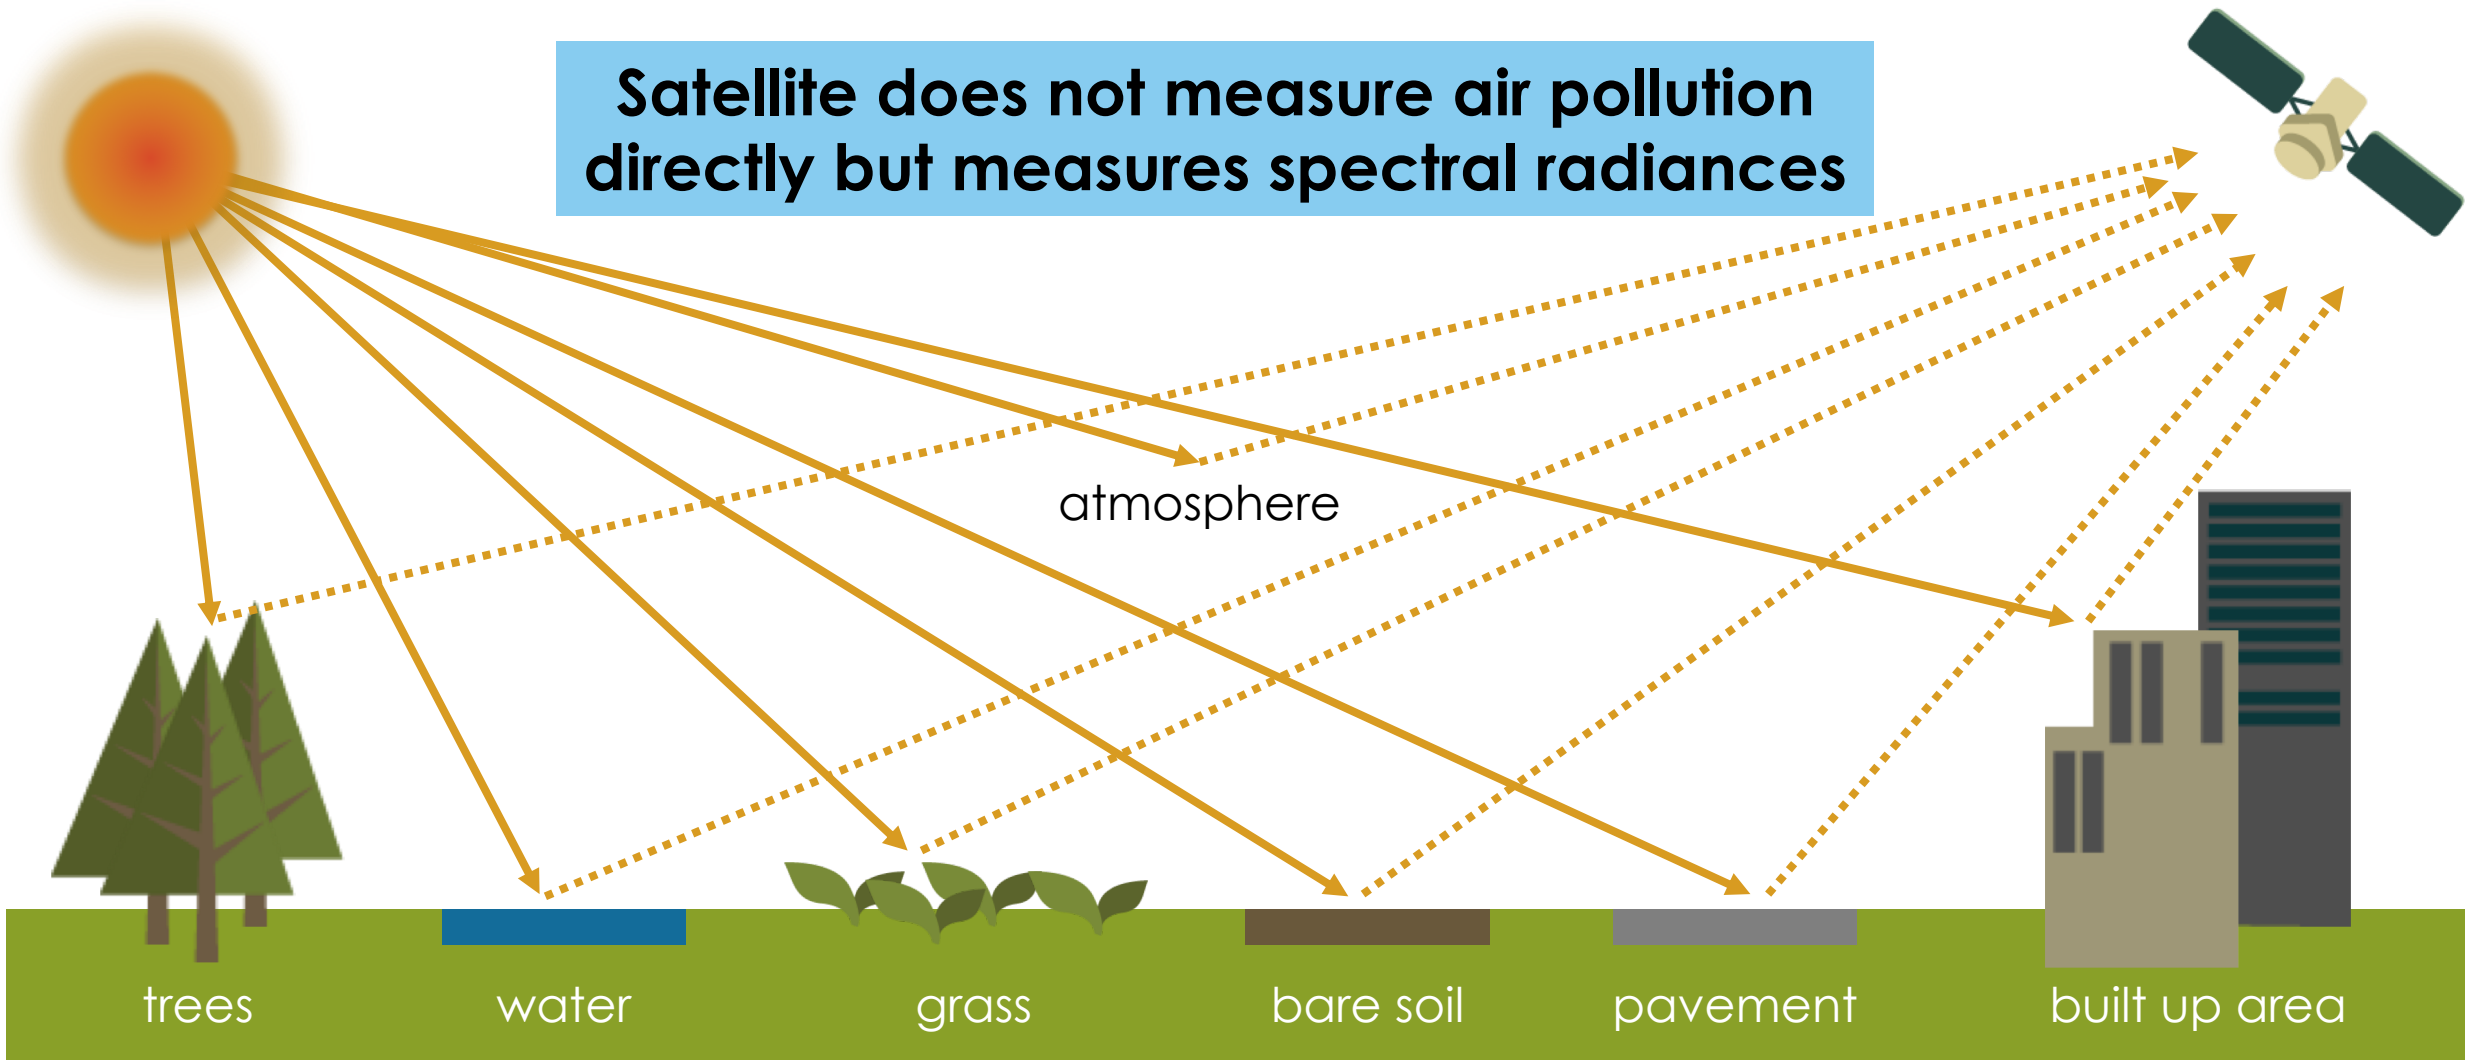

A geo-physical number

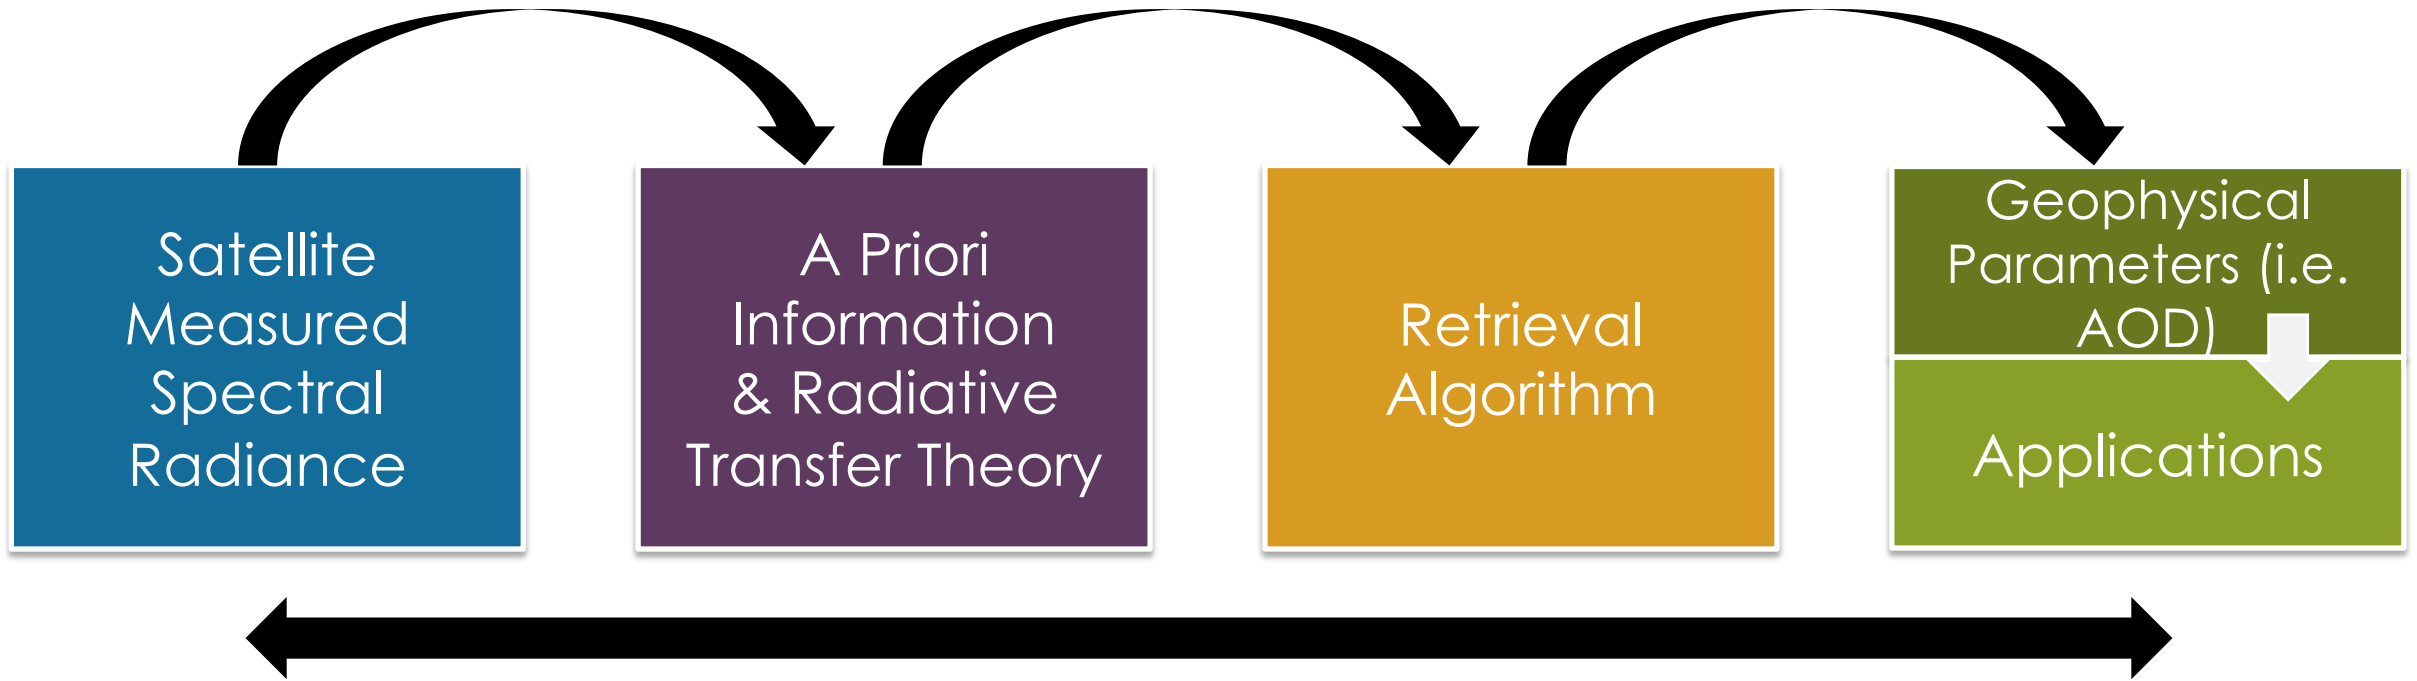

What do satellites measure ?

Satellite does not measure air pollution directly but measures spectral radiances

The Remote Sensing Process

NASA Earth Science Current Operating Missions

InVEST/CubeSats
RAVAN (2016)
IceCube (2017)
MiRaTA (2017)

NASA Earth Science

Missions: Present Through 2023

- (Pre)Formulation
- Implementation
- Primary Ops
- Extended Ops

ISS Instruments

LIS (2020), SAGE III (2020)
TSIS-1 (2018), OCO-3 (2019),
ECOSTRESS (2018), GEDI (2019)
CLARREO-PF (2020), EMIT (TBD)

JPSS-2 Instruments

OMPS-Limb (2019)

InVEST/CubeSats

RAVAN (2016)
IceCube (2017)
MiRaTA (2017)
HARP (2018)
TEMPEST-D (2018)
RainCube (2018)
CubeRRT (2018)
CIRiS (2018*)
CSIM (2018)

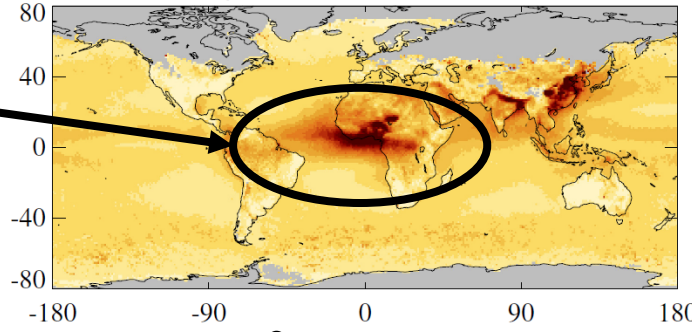

* Target date,
not yet manifested

Aerosols from Satellites

- Several satellites provide state-of-the-art aerosol measurements globally, on a daily basis

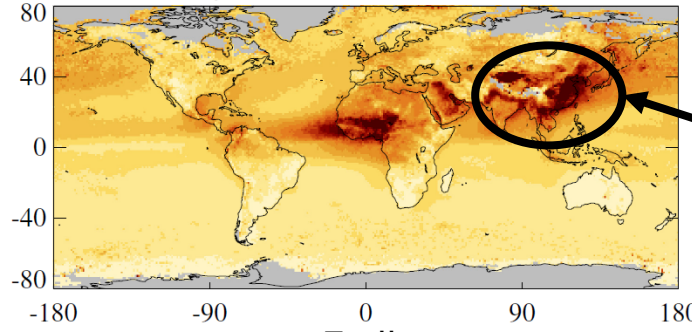

Aerosol Optical Thickness (Aqua MODIS)

Winter

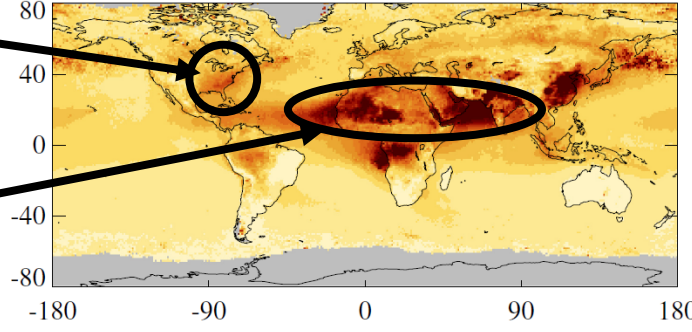

biomass burning

Spring

pollution & dust

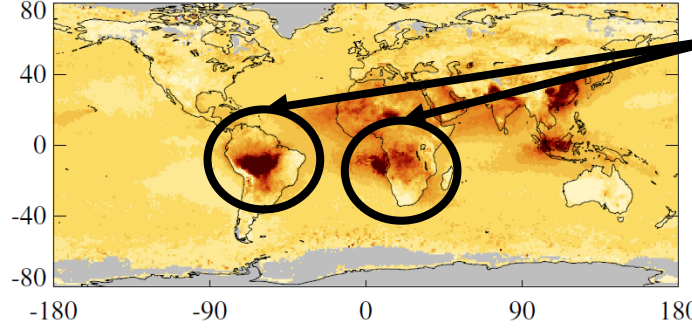

Summer

haze & pollution

dust

Fall

biomass burning

AERONET

<http://aeronet.gsfc.nasa.gov/>

AERONET measurements of aerosol depth are considered **ground truth** and are used to validate satellite aerosol retrievals

Applications

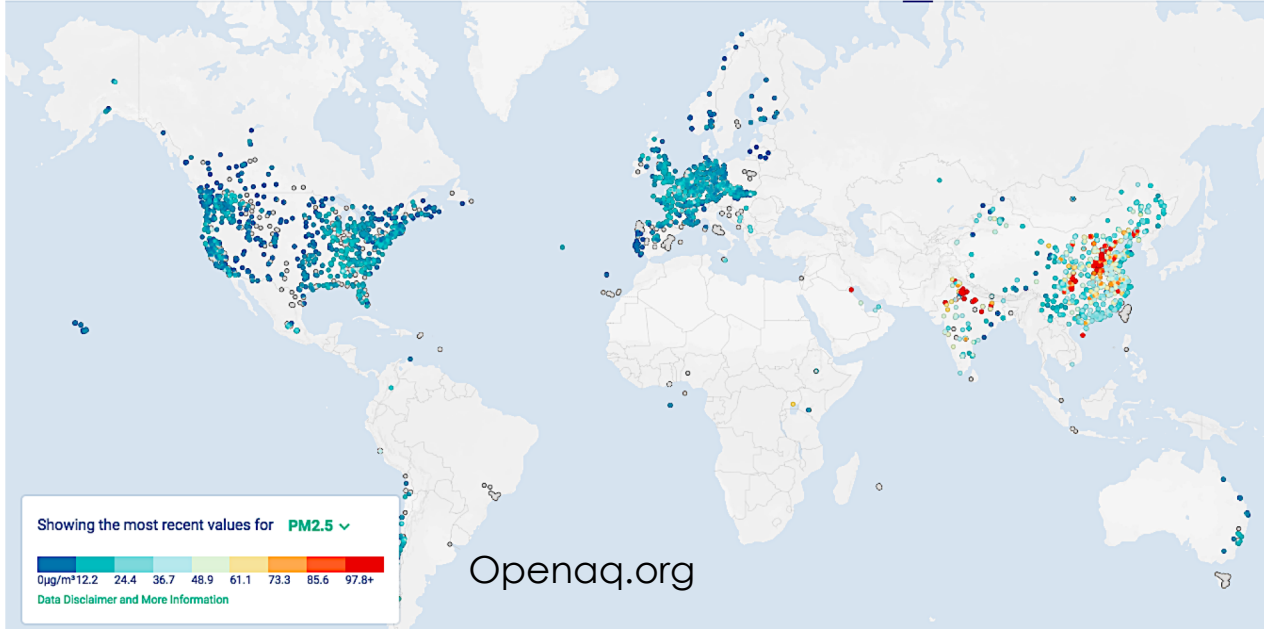

Satellite vs. Ground Observation

Satellite vs. Ground Observation

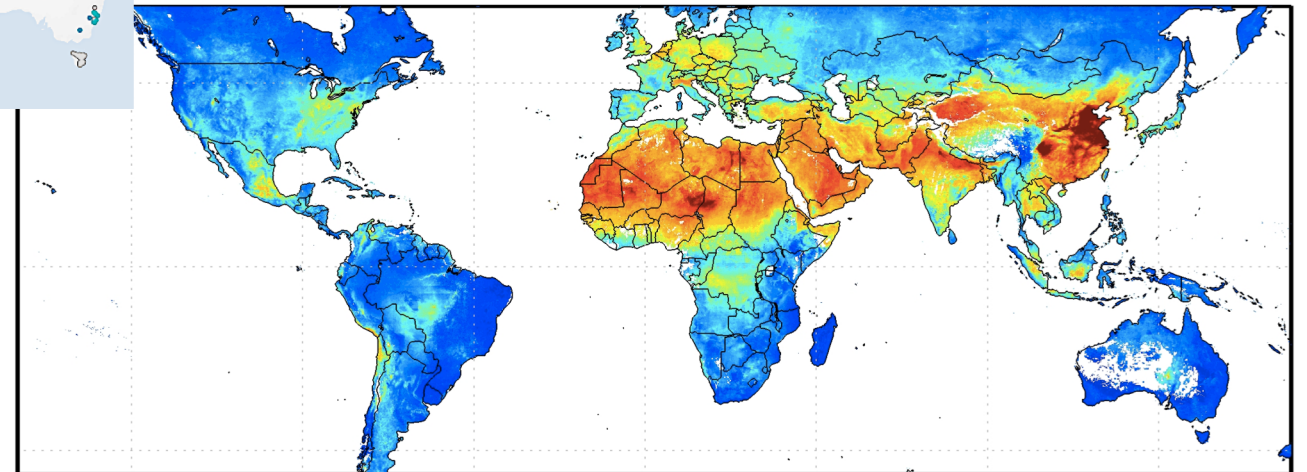

Global Status of PM_{2.5} Monitoring

Air Quality Trends

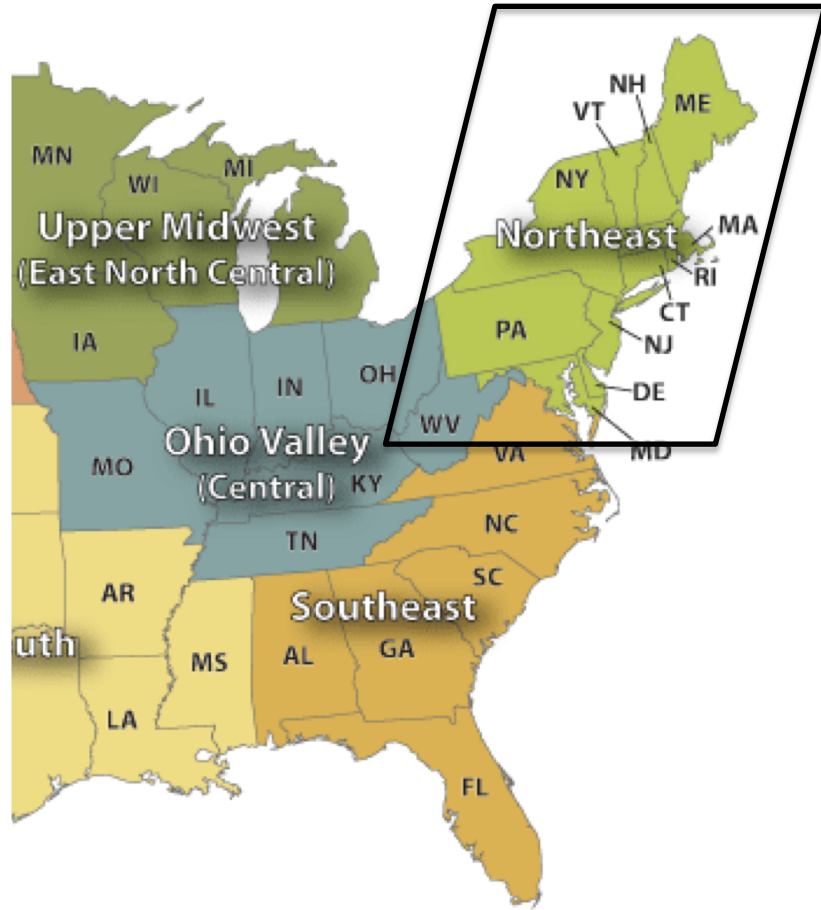

Birmingham, Alabama

- A decreasing trend in annual $PM_{2.5}$ was noted with the almost 22% reduction in $PM_{2.5}$ mass concentration observed in 2006 compared to 2002
- MODIS-Terra Collection 5, Level 2, 10 km² AOTs for 2000-2006

Upcoming Instruments: European Space Agency TROPOMI

TROPOMI Highlights

- Launched 2017
- Observes the whole globe
- Sub-urban spatial resolution (7 km x 7 km)
- 1x/day: NO₂, ozone (0-2 km vertical), aerosol, clouds, formaldehyde, glyoxal, SO₂, CO, methane

Slide Courtesy: Bryan Duncan

TROPOMI: Impact of Resolution

November 28, 2017

OMI NO₂ (Real Data)

TROPOMI NO₂ (Real Data)

Spatial Resolution = 3.5 x 7.0 km²

Global pollution monitoring constellation (2018-2020)

Policy-relevant science and environmental services enabled by common observations

- Improved emissions, at common confidence levels, over industrialized Northern Hemisphere
- Improved air quality forecasts and assimilation systems
- Improved assessment, e.g., observations to support the United Nations Convention on Long Range

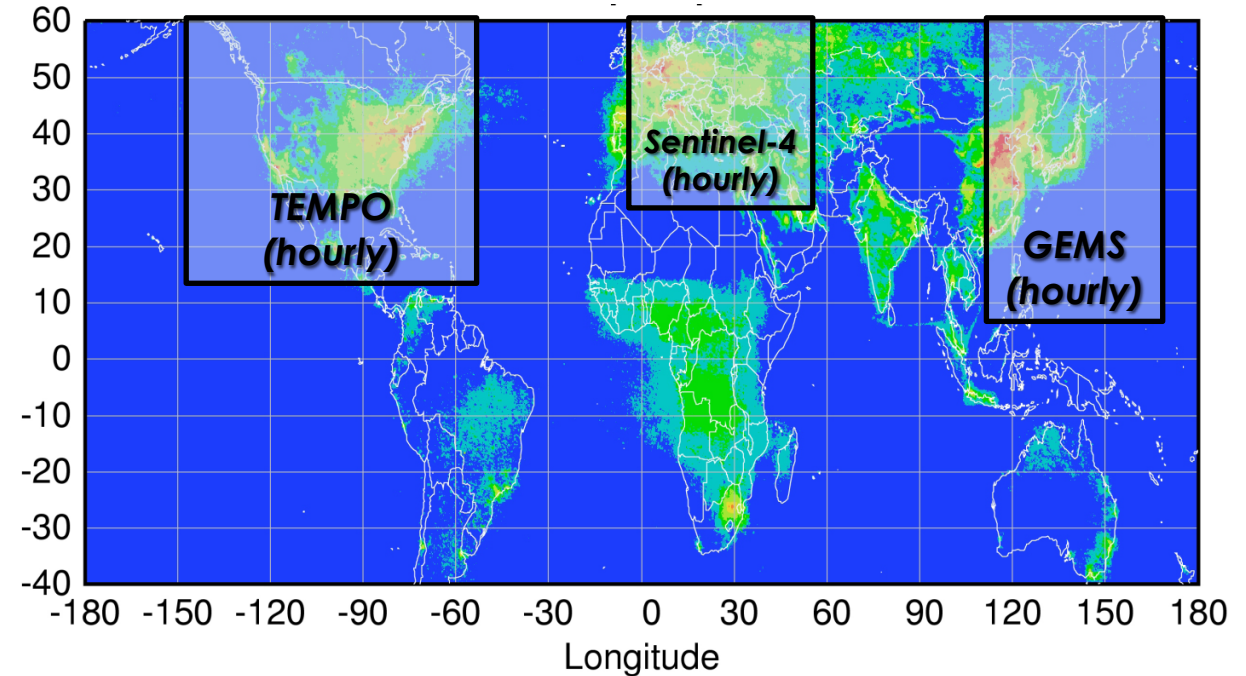

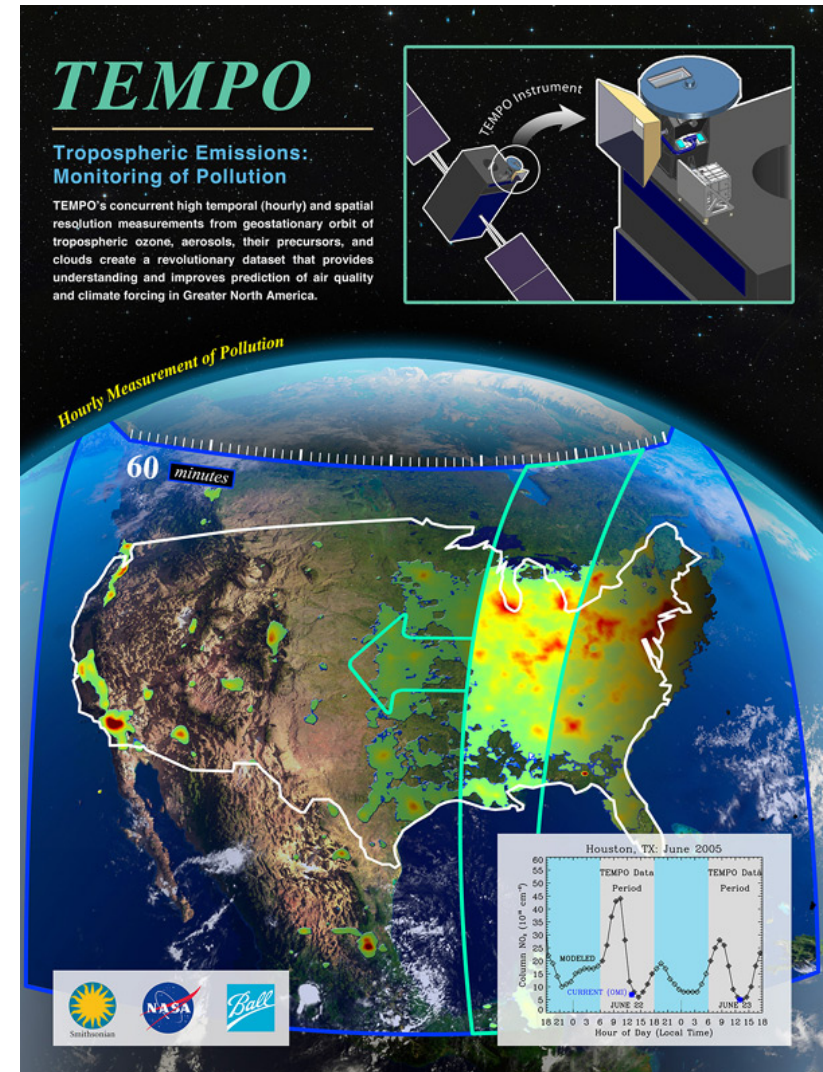

Image Credit: Courtesy Jhoon Kim, Andreas Richter

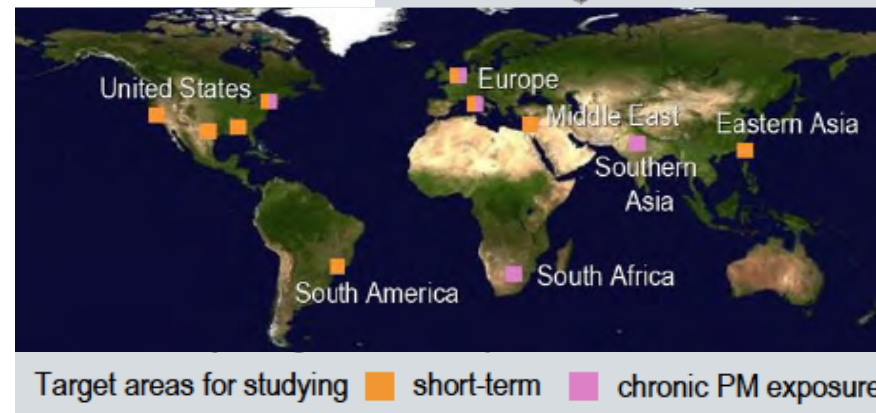

TEMPO

- Geostationary over North America
- High Temporal Resolution
 - 1 hr
- High Spatial Resolution
 - 2.2 x 4.7 km
- Spectral Range
 - 290-740nm
- Data Products:
 - O₃, NO₂, C₂H₂O₂, aerosols, cloud parameters, & UVB radiation
- Expected Launch: 2021

Multi-Angle Imager for Aerosols (MAIA)

- Mission Goal: Assess linkages between different airborne particulate matter types and adverse birth outcomes, cardiovascular and respiratory disease, and premature deaths
- Sun synchronous orbit
- Spatial Resolution: 230 m
- Large Swath Width: 600 km
- Expected Launch: 2021

Questions & Discussion

- Can satellites help fill some of the data gaps?
- What are the advantages of polar orbiting satellites compared to geostationary satellites?
