 @NASAARSET

NASA Satellites, Sensors, and Earth System Models Used for Water Resources Management

Amita Mehta

Amita.v.mehta@nasa.gov

Applied Remote Sensing Training Program (ARSET)

<http://arset.gsfc.nasa.gov/>

- Empowering the global community through remote sensing training
- Tailored to:
 - policy makers
 - regulatory agencies
 - applied environmental professionals
- Goal: to increase the use of NASA Earth Science models & data for environmental applications:

Disasters

Ecoforecasting

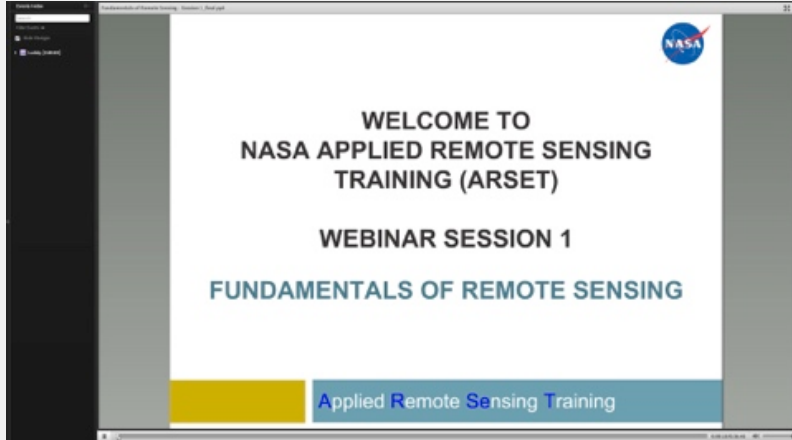

Health & Air Quality

Water Resources

Applied Remote Sensing Training Program (ARSET)

<http://arset.gsfc.nasa.gov/>

Online Trainings

- 1 hr a week, 4-6 weeks
- Live & recorded
- Include demos on data access

In-person Trainings

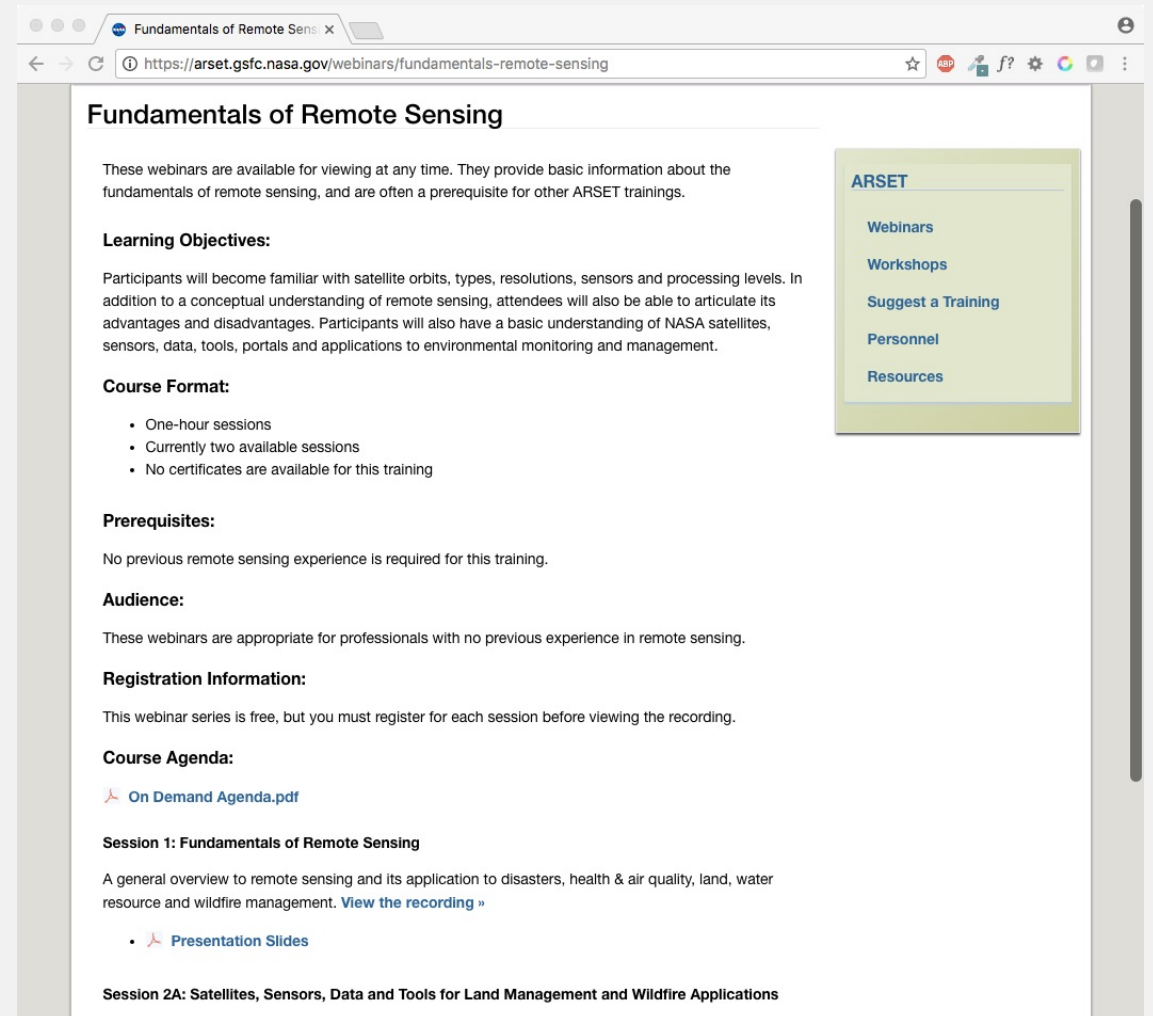

- 2-4 days in a computer lab
- Focus on data access
- Locally relevant case studies

Train the Trainers

- Courses & training manuals
- For groups interested in doing their own remote sensing trainings

Prerequisite

- Session 1: Fundamentals of Remote Sensing
 - <http://arset.gsfc.nasa.gov/webinars/fundamentals-remote-sensing>

The screenshot shows a web browser window with the URL <https://arset.gsfc.nasa.gov/webinars/fundamentals-remote-sensing>. The page title is "Fundamentals of Remote Sensing". The main content area includes a description of the webinars, learning objectives, course format, prerequisites, audience, registration information, and course agenda. A sidebar on the right contains a menu for ARSET with links to Webinars, Workshops, Suggest a Training, Personnel, and Resources.

Fundamentals of Remote Sensing

These webinars are available for viewing at any time. They provide basic information about the fundamentals of remote sensing, and are often a prerequisite for other ARSET trainings.

Learning Objectives:

Participants will become familiar with satellite orbits, types, resolutions, sensors and processing levels. In addition to a conceptual understanding of remote sensing, attendees will also be able to articulate its advantages and disadvantages. Participants will also have a basic understanding of NASA satellites, sensors, data, tools, portals and applications to environmental monitoring and management.

Course Format:

- One-hour sessions
- Currently two available sessions
- No certificates are available for this training

Prerequisites:

No previous remote sensing experience is required for this training.

Audience:

These webinars are appropriate for professionals with no previous experience in remote sensing.

Registration Information:

This webinar series is free, but you must register for each session before viewing the recording.

Course Agenda:

[On Demand Agenda.pdf](#)

Session 1: Fundamentals of Remote Sensing

A general overview to remote sensing and its application to disasters, health & air quality, land, water resource and wildfire management. [View the recording »](#)

- [Presentation Slides](#)

Session 2A: Satellites, Sensors, Data and Tools for Land Management and Wildfire Applications

ARSET

- [Webinars](#)
- [Workshops](#)
- [Suggest a Training](#)
- [Personnel](#)
- [Resources](#)

Outline

- Water Resources Management
- Overview of Satellites and Sensors
- Overview of Earth System Models
- Data and Tools

An aerial photograph of a river delta and coastline. The river is a light brownish-green color, flowing from the top left towards the bottom right, where it meets the ocean. The coastline is visible on the right side, with a sandy beach and some small islands. The water in the ocean is a deep blue. A semi-transparent white rectangular box is overlaid on the right side of the image, containing the text 'Water Resources Management' and a horizontal line below it.

Water Resources Management

Water Resources Management

- For sustainable water management, it is critical to have accurate estimates of water cycle components

Image Credit: USGS

Water Resources Management

Freshwater Components

Over a watershed, river basin, or region:

- Precipitation (rain, snow) is the main source of fresh water
 - Other regional contributions: runoff and streamflow, lakes, soil moisture, and ground water
- Evaporation and evapotranspiration through loss of water to the atmosphere and runoff outflow contribute to depletion of water
- Surface fresh water availability (W) is largely controlled as follows:

$$W = (\text{precipitation} + \text{runoff in the region}) - (\text{evaporation/evapotranspiration} + \text{runoff outflow} + \text{infiltration})$$

Water Resources Data Applications

Freshwater Components Required

Water Allocation

- Water Budget

Agricultural & Irrigation Management

- Precipitation
- Soil Moisture
- Evapotranspiration

Flood & Drought Management

- Precipitation
- Runoff/Streamflow
- Soil Moisture
- Evapotranspiration
- Groundwater

Reservoir & Dam Management

- Reservoir Height
- Precipitation
- Runoff/Streamflow

Freshwater Information

- Not all water cycle components can easily be measured directly, such as:
 - Evapotranspiration
 - Runoff
 - Water vapor transport
- NASA satellites and Earth system models measure and calculate all water cycle components

NASA Satellites & Earth System Models

Provide Hourly, Daily, Seasonal, and Multi-Year Time Scales

Useful for water resources management and hydrology model inputs:

- Rain
- Soil Moisture
- Snow and Ice
- Temperature
- Humidity
- Winds
- Surface Radiation
- Ground Water
- Vegetation Index
- Evapotranspiration
- Runoff

From satellites and models

From satellite observations

From atmosphere-land models that assimilate satellite observations

An aerial satellite image showing a river delta system with multiple channels and a sandy coastline. The water is a mix of light blue and green, indicating sediment. The land is green and brown. A semi-transparent white box is overlaid on the right side of the image, containing the title text.

Overview of Satellites and Sensors

NASA Satellites for Water Resources Monitoring

- Landsat: 07/1972 – present
- Tropical Rainfall Measuring Mission (TRMM): 11/1997 – 04/2015
- Global Precipitation Measurements (GPM): 02/2014 – present
- Terra: 12/1999 – present
- Aqua: 05/2002 – present
- Soil Moisture Active Passive (SMAP): 01/2015 – present
- Gravity Recovery and Climate Experiment (GRACE): 03/2002 – present
- Jason 1, 2, 3: 12/2001 - present

NASA Satellites for Water Resources Monitoring

- Each satellite carries one or more sensors or instruments with specific spectral channels to observe geophysical quantities
 - This presentation will describe sensors most useful for water resources data
- Landsat: 07/1972 – present
 - Tropical Rainfall Measuring Mission (TRMM): 11/1997 – 04/2015
 - Global Precipitation Measurements (GPM): 02/2014 – present
 - Terra: 12/1999 – present
 - Aqua: 05/2002 – present
 - Soil Moisture Active Passive (SMAP): 01/2015 – present
 - Gravity Recovery and Climate Experiment (GRACE): 03/2002 – present
 - Jason 1, 2, 3: 12/2001 - present

- Global Precipitation Measurements (GPM): 02/2014 – present
- Terra: 12/1999 – present
- Aqua: 05/2002 – present
- Soil Moisture Active Passive (SMAP): 01/2015 – present
- Gravity Recovery and Climate Experiment (GRACE): 03/2002 – present
- Jason 1, 2, 3: 12/2001 - present

Landsat Satellites and Sensors

<http://landsat.gsfc.nasa.gov>

Credit: http://landsat.usgs.gov/about_mission_history.php

Enhanced Thematic Mapper (ETM+)

<http://geo.arc.nasa.gov/sge/landsat/l7.html>

- Onboard Landsat-7
- Polar orbiting satellite
- Spatial Coverage and Resolution:
 - Global, Swath: 185km
 - Spatial Resolution: 15m, 30m, 60m
- Temporal Coverage and Resolution:
 - April 15, 1999-present
 - 16-day revisit time

Spectral Bands

- 8 bands (blue-green, green, red, reflected & thermal IR, panchromatic)
 - Bands 1-5, 7: 30 m
 - Band 6: 60 m
 - Band 8: 15 m

Operational Land Imager (OLI)

- Onboard Landsat-8
- Polar orbiting satellite
- Spatial Coverage and Resolution:
 - Global, Swath: 185km
 - Spatial resolution: 15m, 30m
- Temporal Coverage and Resolution:
 - Feb 11, 2013 – present
 - 16-day revisit time

Spectral Bands

- 9 bands (blue-green, green, red, near IR, shortwave and thermal IR)
 - Bands 1-7, 9: 30m
 - Band 8:15m

Landsat Data for Water Resources Applications

- Freshwater Component
 - Evapotranspiration (ET)
- Landsat Data Used:
 - Thermal Infrared Emission
 - Blue, Green, Red
 - Near Infrared Spectral Reflectance
- Usage:
 - Derive Land Surface Temperature
 - Land Cover to calculate ET

Brightness Temperature from Landsat TIR California where unseasonably warm temperatures were noted on December 16, 2013. Credit: <https://blogs.esri.com/esri/arcgis/2014/01/06/deriving-temperature-from-landsat-8-thermal-bands-tirs/>

TRMM Satellite & Sensors

<http://trmm.gsfc.nasa.gov>

- NASA & JAXA (Japanese Space Agency) Joint Mission
- In a non-polar, low-inclination orbit
- Altitude of approximately 350 km, raised to 403 km after Aug 23, 2001
- Spatial Coverage
 - 16 TRMM orbits a day covering global tropics between 35°S – 35°N latitude
- Revisit Time: 11-12 hrs
 - Time of observation changes daily
- Sensors:
 - TMI, PR, VIRS, LIS, CERES

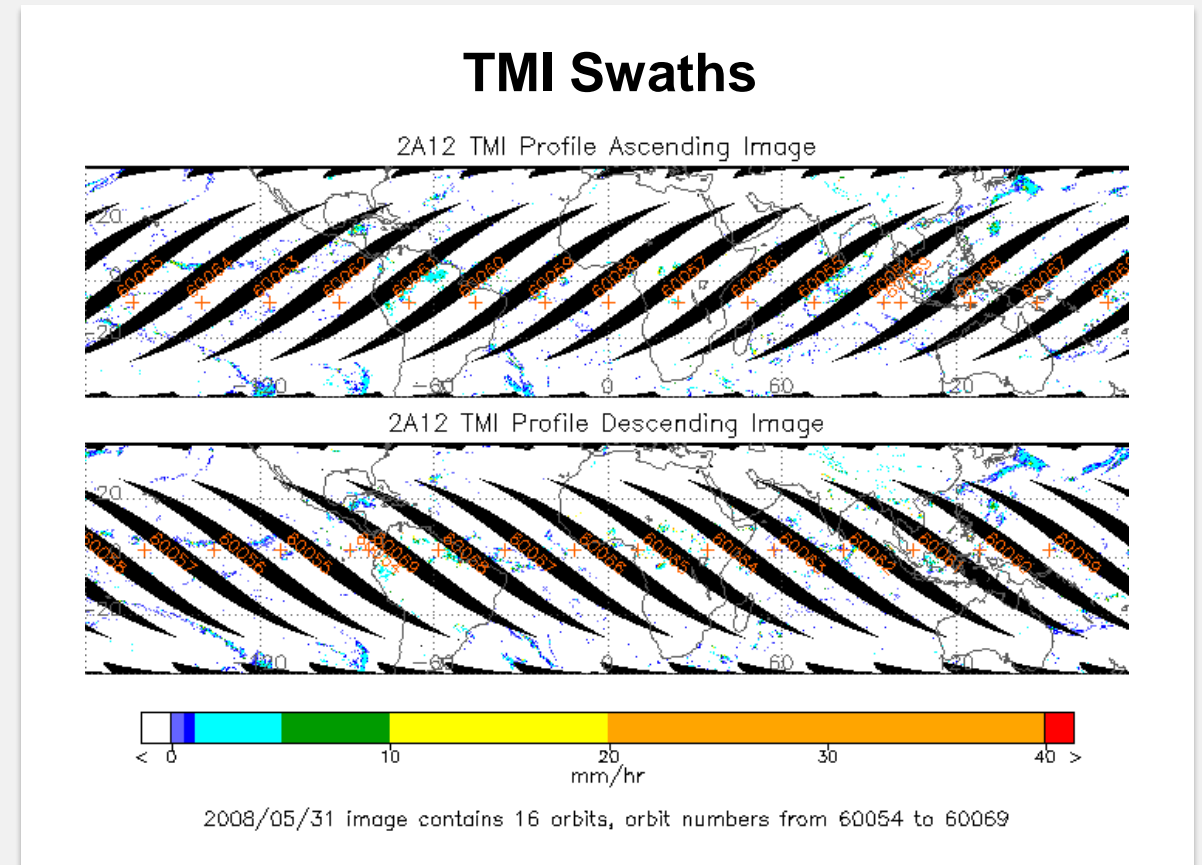

TRMM Orbits

TRMM Microwave Imager (TMI)

<http://pmm.nasa.gov/TRMM/TMI>

- Spatial Coverage and Resolution:
 - Coverage: -180°-180°, 35°S-35°N
 - Swath: 760km (878km after 8/2001)
 - Vertical Resolution:
 - 0.5 km from surface – 4 km
 - 1.0 km from 4-6 km
 - 2.0 km from 6-10 km
 - 4.0 km from 10-18 km
- Temporal Coverage and Resolution:
 - Nov 27, 1998 – April 15, 2015
 - 16 orbits per day
- Channel Frequencies
 - 10.7, 19.4, 21.3, 37, 85.5 GHz

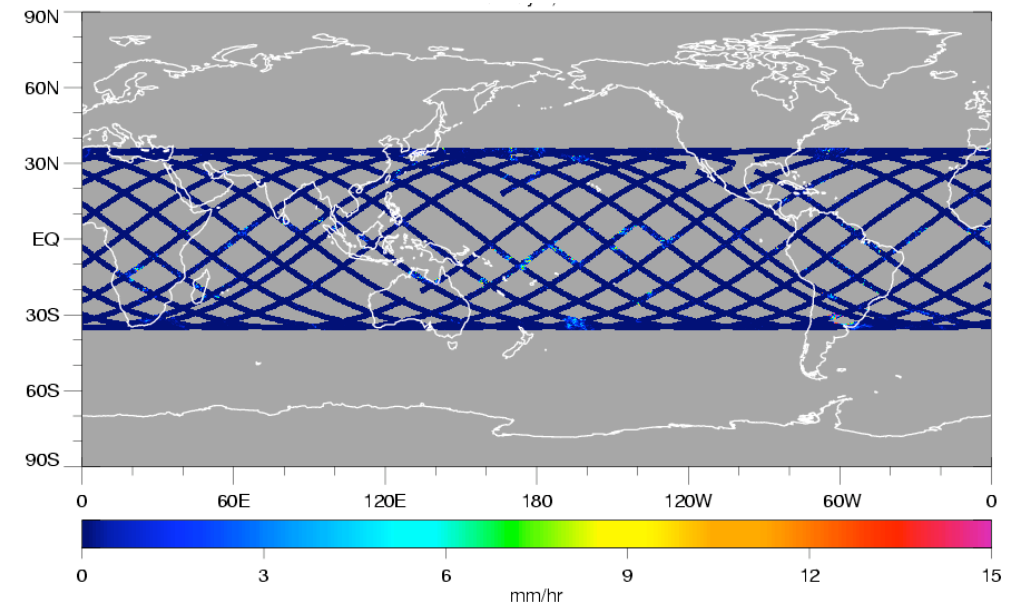

Precipitation Radar (PR)

<http://pmm.nasa.gov/TRMM/PR/>

- Spatial Coverage and Resolution:
 - Coverage: 35°S – 35°N
 - Swath: 215 km (247 after 8/2001)
 - Spatial Resolution: 4.3km (5 km)
 - Vertical Resolution: 250m (from 0-20 km)
- Temporal Coverage and Resolution:
 - Nov 27, 1998 – Oct 7, 2014
 - ~16 orbits per day
- Frequency:
 - 13.6 GHz

PR Swaths

Kummerow, C., et. al, 1998: The tropical rainfall measuring mission (TRMM) sensor package, J. Atmos. Oceanic Technol., 15, 809-817.

TRMM Data for Water Resources Applications

- Freshwater Component:
 - Rain Rate
- TRMM Data Used: TMI Brightness Temperatures, PR Reflectivity, VIRS Brightness Temperature and Reflectance
- TMI and PR Rainfall on September 16, 2013, at 0227 UTC when TRMM flew over Hurricane Ingrid in Gulf of Mexico
- PR shows 3D structure of the rainfall

TMI Rainfall

PR Rainfall

GPM Satellite & Sensors

<http://pmm.nasa.gov/GPM>

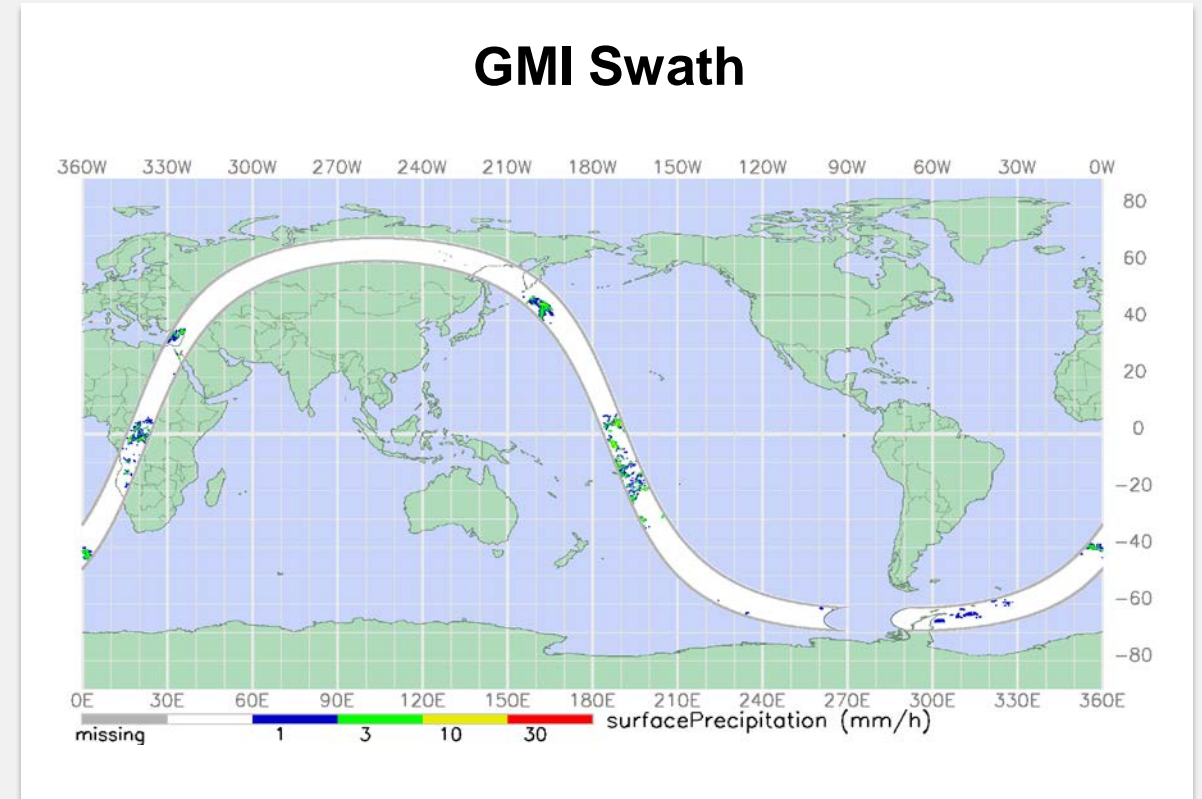

- NASA and JAXA (Japanese Space Agency) Joint Mission
- GPM core satellite is in a non-polar, low inclination orbit
 - Altitude: 407 km
- Spatial Coverage:
 - 16 orbits a day covering global tropics, between 65°S – 65°N
- Along with constellation of satellites, GPM has revisit time of 1-2 hrs over land
- Sensors:
 - GMI, DPR

GPM Microwave Imager (GMI)

<http://pmm.nasa.gov/GPM/flight-project/GMI>

- Spatial Coverage and Resolution:
 - Coverage: -180°-180°, 65°S-65°N
 - Swath: 885 km
 - Spatial Resolution: 4.4-32 km
 - Vertical Resolution:
 - 0.5 km from surface – 4 km
 - 1.0 km from 4-6 km
 - 2.0 km from 6-10 km
 - 4.0 km from 10-18 km
- Temporal Coverage and Resolution:
 - Feb 2014 – present
 - ~2-4 hr observations
- Channel Frequencies:
 - 10.6, 18.7, 23.8, 36.5, 89, 166, 183 GHz

Dual Precipitation Radar (DPR)

<http://pmm.nasa.gov/GPM/flight-project/DPR>

- Spatial Coverage and Resolution:
 - Coverage: -180° - 180° , 65° S- 65° N
 - Swath: 120 km (Ka) and 245 km (Ku)
 - Spatial Resolution: 5.2 km
 - Vertical Resolution: 250 m (from 0-20 km)
- Temporal Coverage and Resolution:
 - Feb 27, 2014 – present
 - ~2-4 hr observations
- Frequency:
 - 13.6 and 35.5 GHz

DPR Swaths

Ka 35.5 GHz

Ku 13.6 GHz

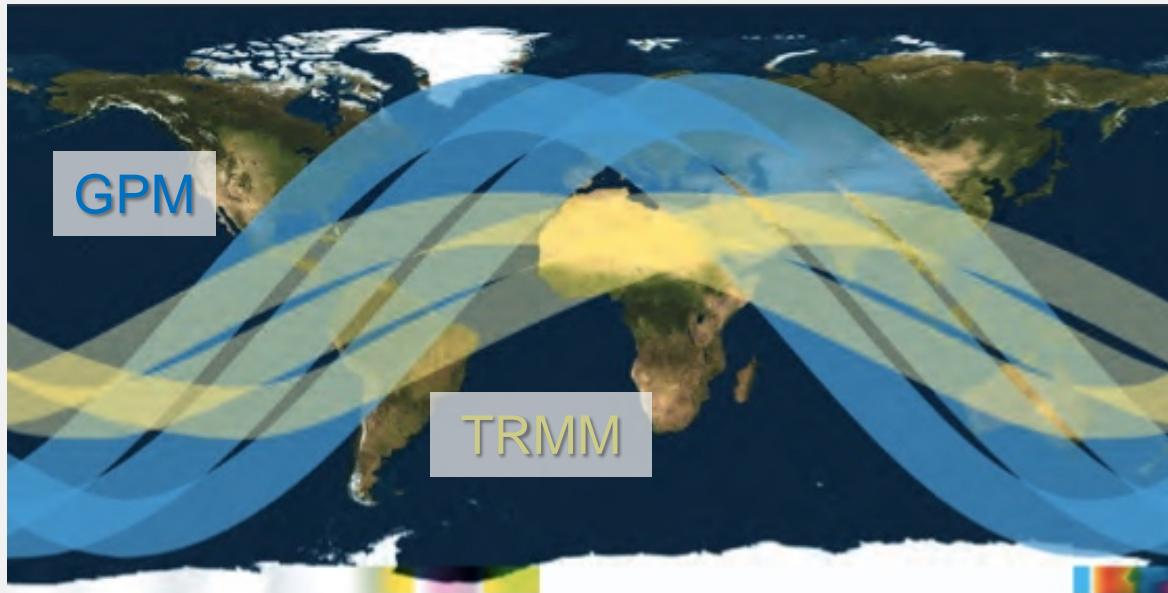

GPM Data for Water Resources Applications

- Freshwater Component:
 - Continues to provide improved rain rates after TRMM
- Provides estimates of snow rates
- GPM data used:
 - GMI brightness temperatures
 - DPR Reflectivities

A storm over the eastern United States showing precipitation, from rain to snow. Observed by GPM Core Satellite on March 17, 2014.
Credit: <https://pmm.nasa.gov/image-gallery/gpm-data-march-2014-east-coast-snowstorm>

TRMM and GPM Comparison

- TRMM measurements are limited to tropics; GPM measurements span middle and high latitudes

- GMI and DPR provide improved reference standard for inter-calibration of constellation precipitation measurements compared to TMI/PR
- Better accuracy of measurements for GMI & DPR
- GMI has higher spatial resolution than TMI
- Improved light rain and snow detection in GPM (TRMM cannot detect rainfall <math><0.5\text{mm/hr}</math>)
- DPR has better identification of liquid, ice, mixed—phase precipitation particles

Multi-Satellite Algorithms for TRMM and GPM

<http://pmm.nasa.gov/science/precipitation-algorithms/>

- TRMM and GPM Core satellites are used to calibrate microwave observations from a constellation of national and international satellites
- This multi-satellite algorithms allow improved spatial and temporal coverage of precipitation data
- TRMM Multi-satellite Precipitation Analysis (**TMPA**) is widely used for applications
- TMPA will be extended to match Integrated Multi-satellitE Retrievals for GPM (**IMERG**)

References:

Huffman, G.J., R.F. Adler, D.T. Bolvin, G. Gu, E.J. Nelkin, K.P. Bowman, E.F. Stocker, D.B. Wolff, 2007: The TRMM Multi-satellite Precipitation Analysis: Quasi-Global, Multi-Year, Combined-Sensor Precipitation Estimates at Fine Scale. J. Hydrometeor., 8, 33-55. [MERG_ATBD_V4.5.pdf](#)

TRMM Multi-Satellite Precipitation Analysis (TMPA)

http://precip.gsfc.nasa.gov/trmm_comb.html

- TMPA Combines PR and TMI rain rates
 - Inter-calibrates passive rain rates from other satellite sensors (TMI, SSM/II, AMSR, AMSU-B, MHS, IR radiometers)*
 - Inter-calibrates with national and international geostationary and NOAA low-Earth orbiting satellites infrared measurements by using VIRS
 - Final rain product is calibrated with rain gauge analyses on monthly time scale
 - SSM/I and SSMIS: Special Sensor Microwave Imager Special Sensor Microwave Imager/
Sounder – sensor on Defense Meteorology
Satellite Project (DMSP)
- AMSR: Advanced Microwave Scanning Radiometer – sensor on NASA Aqua satellite
- AMSU: Advanced Microwave Sounding Unit –sensor on NOAA operational satellite

Integrated Multi-satellite Retrievals for GPM (IMERG)

https://pmm.nasa.gov/sites/default/files/document_files/IMERG_ATBD_V4.5.pdf

- Conceptually similar to TMPA
- GPM constellation satellites include:
 - GCOM-W, DMSP, Megha-Tropiques, MetOp-B, NOAA-N', NPP, NPOESS
- Final rain product is calibrated with rain gauge analyses on monthly time scale

The Art of Creating Digital Hurricanes

Every day, scientists at NASA work on creating better hurricanes – on a computer screen. At NASA’s Goddard Space Flight Center in Greenbelt, Maryland, a team of scientists spends its days incorporating millions of atmospheric observations, sophisticated graphic tools and lines of computer code to create computer models simulating the weather and climate conditions responsible for hurricanes. Scientists use these models to study the complex...

Snow Cover

Version 6 | Version 5

The following Version 6 snow cover data sets are currently available at NSIDC. This table will be updated as new data sets are released. NSIDC will continue to distribute Version 5 until Version 6 reprocessing is complete.

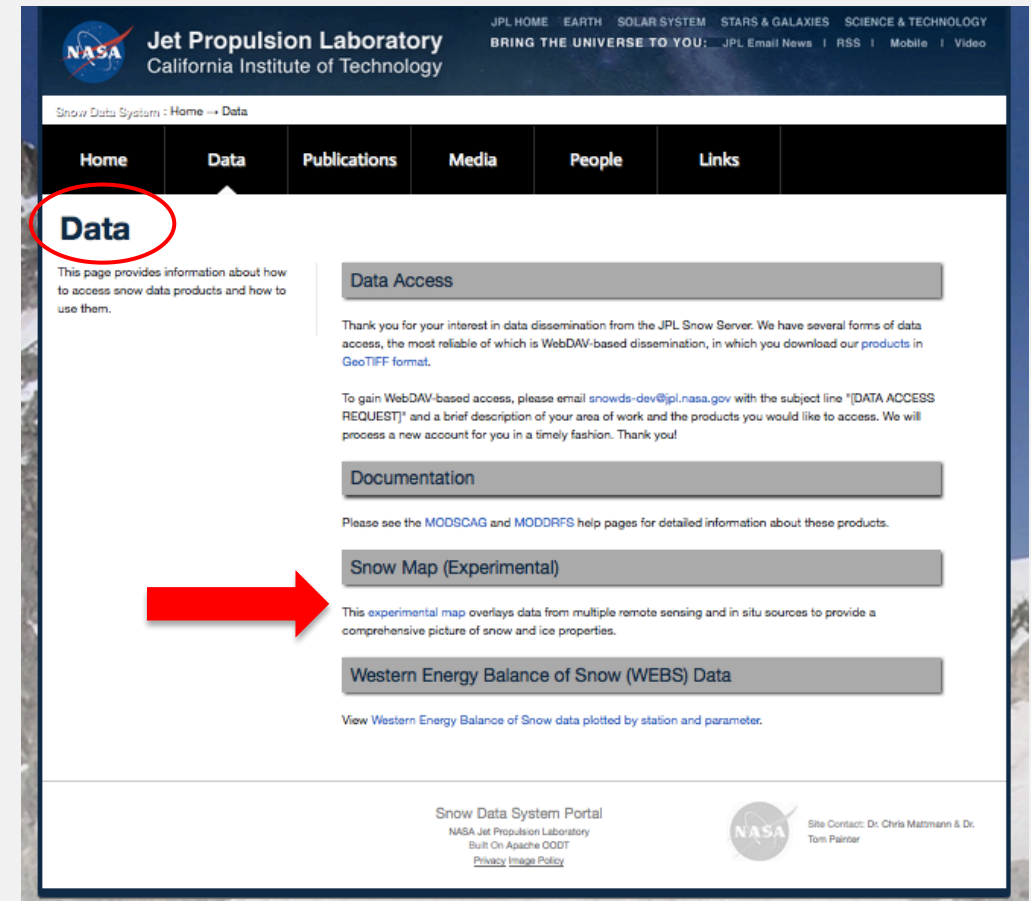

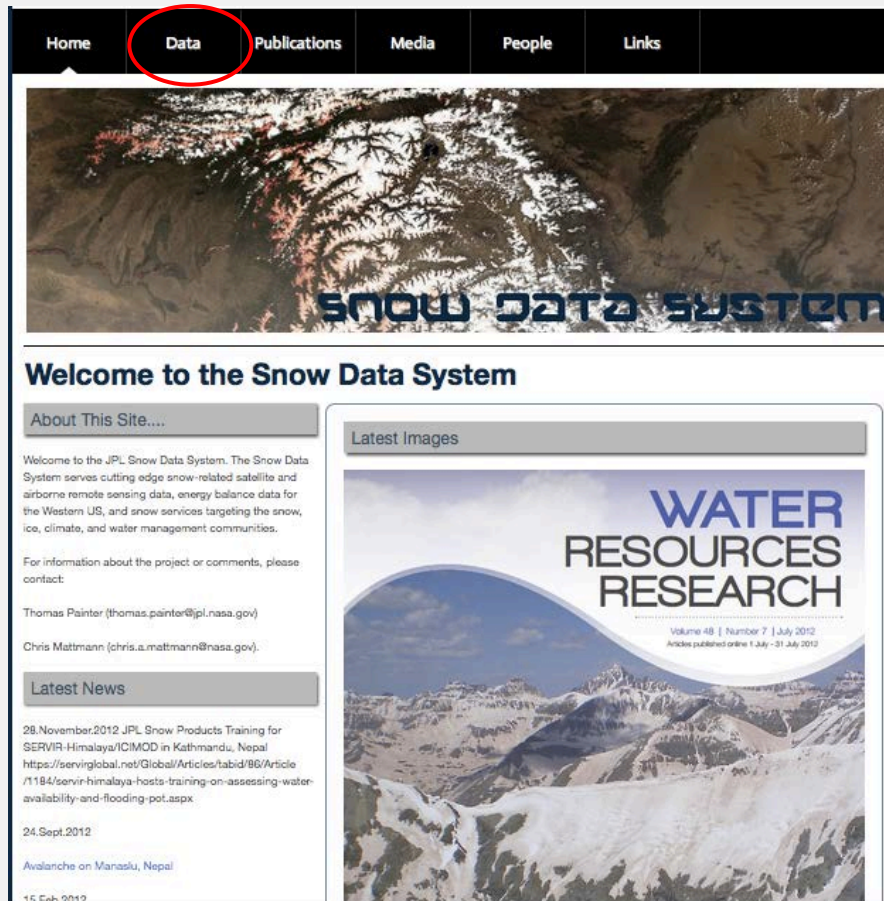

ID	Title	Spatial Resolution	Temporal Resolution	Parameters
MYD10_L2	MODIS/Aqua Snow Cover 5-Min L2 Swath 500m, Version 6	500 m	5 minute	Snow Cover
MOD10_L2	MODIS/Terra Snow Cover 5-Min L2 Swath 500m, Version 6	500 m	5 minute	Snow Cover
MYD10A1	MODIS/Aqua Snow Cover Daily L3 Global 500m Grid, Version 6	500 m	1 day	Albedo, Snow Cover
MOD10A1	MODIS/Terra Snow Cover Daily L3 Global 500m Grid, Version 6	500 m	1 day	Albedo, Snow Cover
MYD10C1	MODIS/Aqua Snow Cover Daily L3 Global 0.05Deg CMG, Version 6	0.05 Deg	1 day	Snow Cover
MOD10C1	MODIS/Terra Snow Cover Daily L3 Global 0.05Deg CMG, Version 6	0.05 Deg	1 day	Snow Cover
MYD10A2	MODIS/Aqua Snow Cover 8-Day L3 Global 500m Grid, Version 6	500 m	8 day	Snow Extent
MOD10A2	MODIS/Terra Snow Cover 8-Day L3 Global 500m Grid, Version 6	500 m	8 day	Snow Extent
MYD10C2	MODIS/Aqua Snow Cover 8-Day L3 Global 0.05Deg CMG, Version 6	0.05 deg	8 day	Snow Extent
MOD10C2	MODIS/Terra Snow Cover 8-Day L3 Global 0.05Deg CMG, Version 6	0.05 deg	8 day	Snow Extent
MYD10CM	MODIS/Aqua Snow Cover Monthly L3 Global 0.05Deg CMG, Version 6	0.05 deg	1 month	Snow Cover
MOD10CM	MODIS/Terra Snow Cover Monthly L3 Global 0.05Deg CMG, Version 6	0.05 deg	1 month	Snow Cover

Note: Reprocessing to Version 6 is complete for all MODIS snow cover data sets. For more information, see [MODIS | V6 Reprocessing Plan](#).

The screenshot shows the NASA Reverb ECHO search interface. At the top, it identifies the user as 'National Aeronautics and Space Administration' and the system as 'EOSDIS NASA's Earth Observing System Data and Information System'. The page is titled 'Step 1: Select Search Criteria'. On the left, there are search options for Spatial, Temporal, Platforms & Instruments, Campaigns, Processing Levels, and Science Keywords. The main area features a 'Spatial Search' section with a bounding box input field containing coordinates (-50.736, 163.477, -11.144, 105.680) and a map of the world with a satellite view. Below the map, there are search terms 'MYD10C1' and a 'Try out this query in Earthdata Search' button. The 'Temporal Search' section is also visible. At the bottom, there are search results for 'MODIS/Aqua Snow Cover Daily L3 Global 0.05Deg CMG V005'.

Where to get MODSCAG Snow Data?

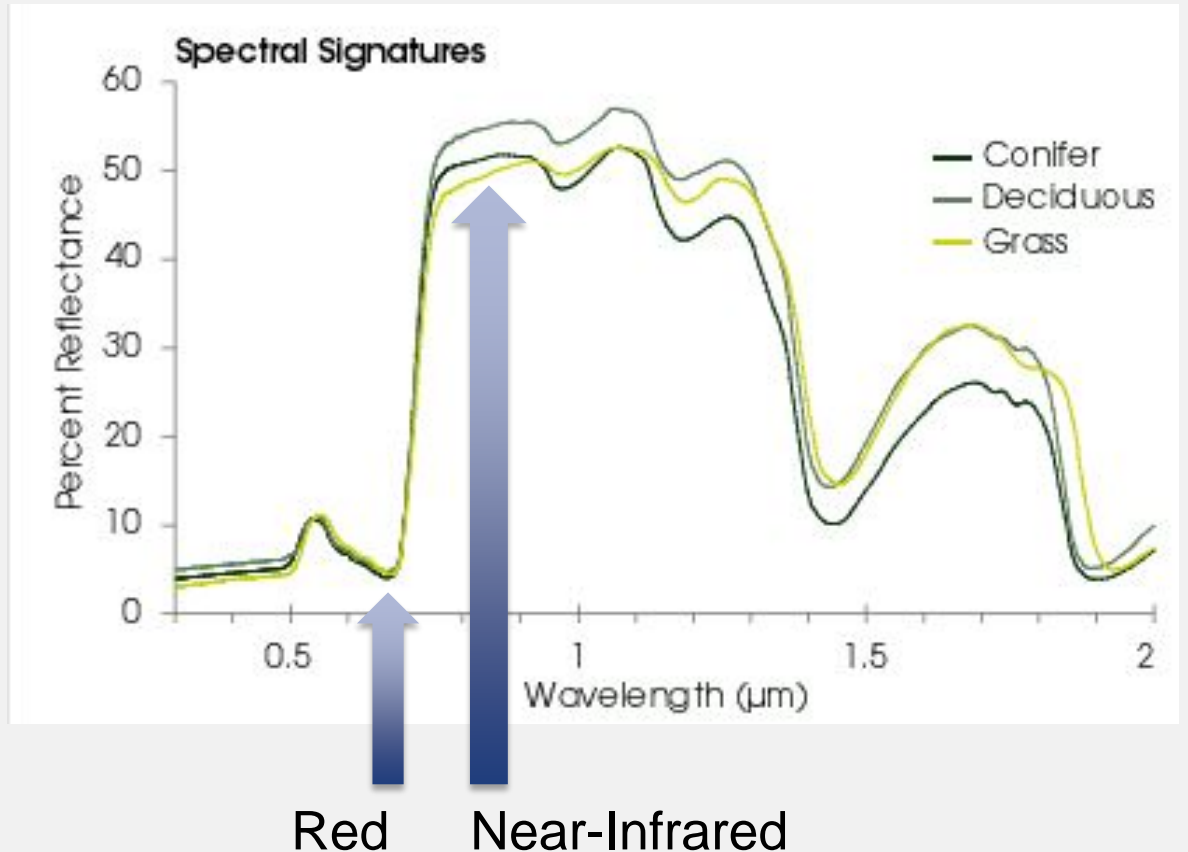

Available from JPL Snow Data Server: <http://snow.jpl.nasa.gov/portal/>

MODIS Normalized Vegetation Index

<http://arset.gsfc.nasa.gov/land/webinars/advancedNDVI>

- Based on the relationship between red and near-infrared wavelengths
 - chlorophyll strongly absorbs visible (red)
 - plant structure strongly reflects near-infrared
- $$\text{NDVI} = \frac{\text{Near-Infrared} - \text{Red}}{\text{Near-Infrared} + \text{Red}}$$
- Values range from -1.0 – 1.0
 - Negative values – 0 mean no green leaves
 - Values close to 1 indicate the highest possible density of green leaves

Where to get MODIS NDVI?

Available from the Land Process Distributed Archive Center (LPDAAC):

Soil Moisture Active Passive (SMAP)

<http://smap.jpl.nasa.gov>

- Polar Orbit
 - Altitude: 685 km
- Spatial Coverage:
 - Global
- Launched Jan 31, 2015
- Temporal Coverage:
 - April 2015 – present
- Sensors:
 - Microwave Radiometer
 - Microwave Radar (not currently available)

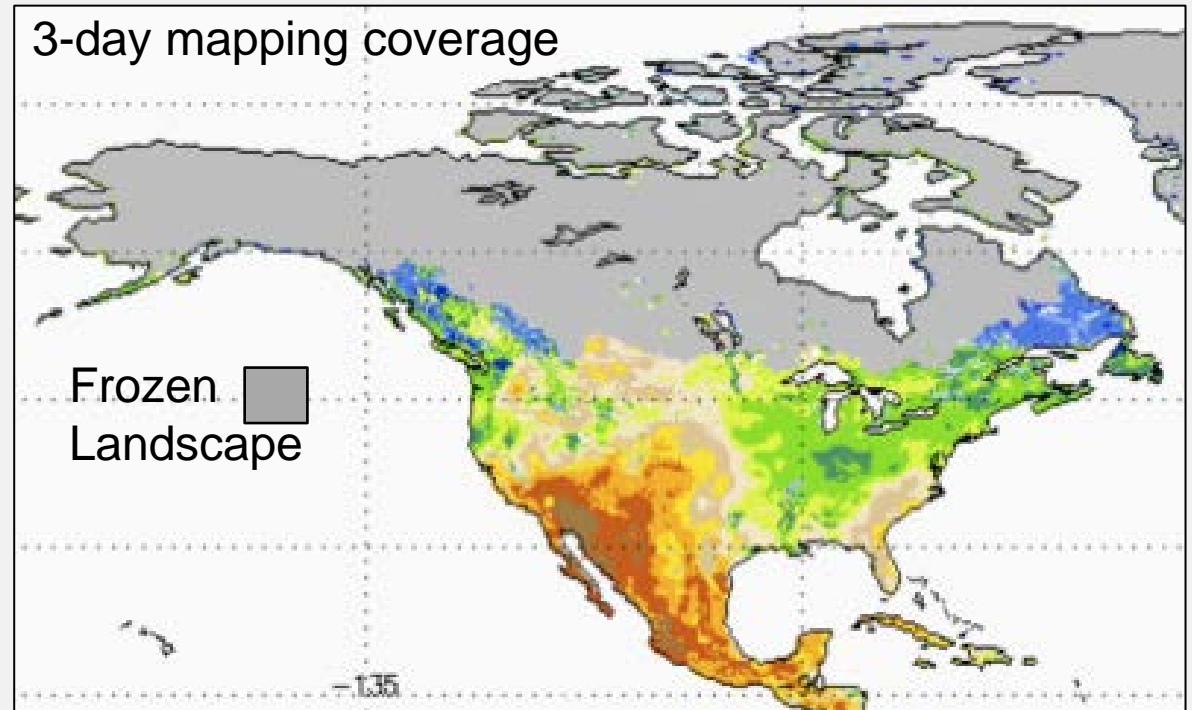

SMAP Microwave Radiometer & Radar

<http://smap.jpl.nasa.gov/observatory/instrument/>

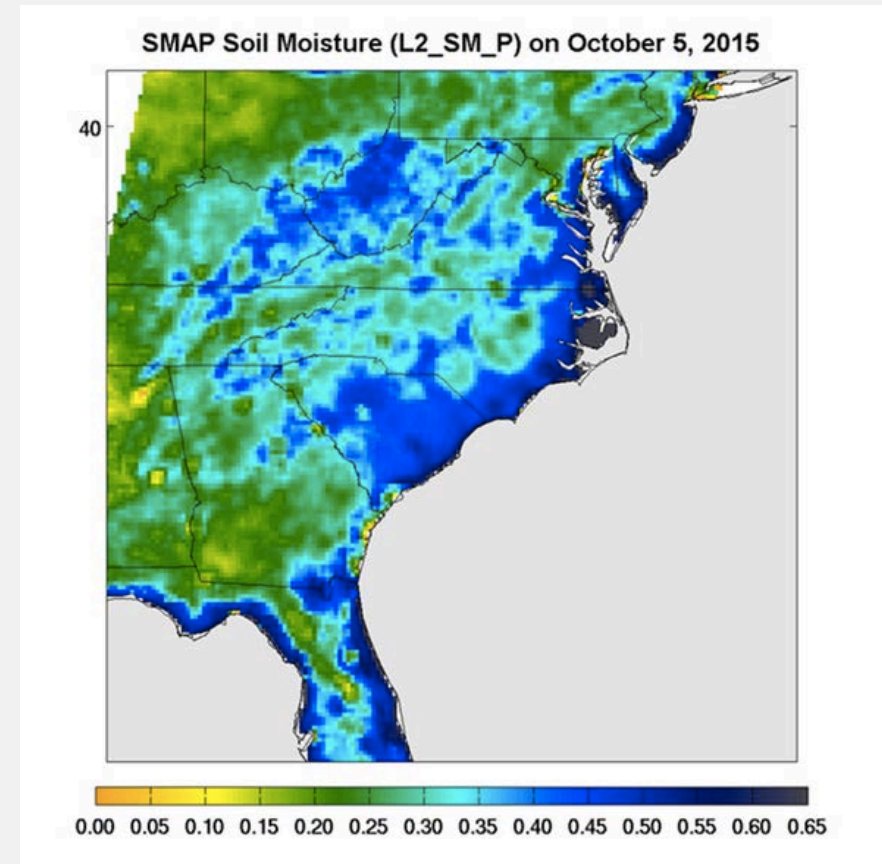

- Radiometer:
 - Swath: 1,000 km
 - Frequency: 1.41 GHz
 - Polarization: H, V, 3rd & 4th Stokes
 - Resolution: 40 km
- Radar: designed to work as Synthetic Aperture Radar (SAR)
 - Frequency: 1.26 GHz
 - Polarization: VV, HH, HV
 - Resolution: 3 km
 - **Stopped operating after Jul 7, 2015**
- Temporal Resolution:
 - Every 3 days

- Measures the moisture in the top 5 cm of soil

SMAP Data for Water Resources Applications

- Freshwater Component:
 - Surface Soil Moisture
 - Freeze/Thaw State
 - Root Zone Soil Moisture
- SMAP Data Used: Radiometer Brightness Temperatures

Surface soil moisture from SMAP showing Carolina floods in October 2015. Credit: <http://smap.jpl.nasa.gov/news/1253/devastating-carolina-floods-viewed-by-nasas-smap/>

Where to get SMAP Data?

Available from the National Snow & Ice Data Center:
<http://nsidc.org/data/search/#keywords=soil+moisture/>

The image shows a screenshot of the National Snow & Ice Data Center (NSIDC) website. The top navigation bar includes 'DATA', 'RESEARCH', 'NEWS', and 'ABOUT'. A search bar is present with the text 'SEARCH' and 'Web pages'. The main content area features a world map with a semi-transparent box over it that reads 'Soil Moisture Active Passive Data (SMAP) NASA SMAP data at the NSIDC DAAC. Read more ...'. Below the map is a section titled 'Scientific Data for Research' with icons for 'Glaciers', 'Ice Sheets', 'Ice Shelves', 'Permafrost', 'Sea Ice', 'Soil Moisture', and 'Snow'. A red arrow points to the 'Soil Moisture' icon. To the right of the map is a search results page showing 'Showing 1-25 of 236 Data Sets'. The results list several SMAP data products, including 'SMAP L3 Radar Global Daily 3 km EASE-Grid Soil Moisture', 'SMAP L2 Radar Half-Orbit 3 km EASE-Grid Soil Moisture', 'SMAP L3 Radiometer Global Daily 36 km EASE-Grid Soil Moisture', and 'SMAP L2 Radiometer Half-Orbit 36 km EASE-Grid Soil Moisture'. Each result includes a 'Get Data' button and a summary of the data's temporal coverage, parameters, and format.

Level-2 to Level-4 data

GRACE Satellite

<http://www.jpl.nasa.gov/missions/details.php?id=5882>

- Polar, sun-synchronous orbit
- Twin satellite system
- Spatial Coverage and Resolution:
 - Global
 - Resolution: 300-400 km
- Temporal Coverage and Resolution:
 - Mar 17, 2002 – present
 - 250 gravity profiles per day

GRACE Sensors

<http://earthobservatory.nasa.gov/Features/GRACE/>

MTA (Center of Mass Trim Assembly)

Measures the offset between the satellite's center of mass and the "acceleration-proof" mass and adjusts center of mass as needed during the flight

GPS (Black-Jack GPS Receiver and Instrument Processing Unit)

ACC (SuperSTAR Accelerometers)

Measures the non-gravitational accelerations acting on the satellite

KBR (K-band Ranging System)

Measurements of the distance change between the two satellites needed to measure fluctuations in gravity

USO (Ultra Stable Oscillator)

Provides frequency generation for the K-band ranging system

SCA (Star Camera Assembly)

Determines the two satellites' orientation by tracking them relative to the position of the stars

Reference:
<http://earthobservatory.nasa.gov/Features/GRACE/page5.php>

GRACE Data for Water Resources Applications

Water Component: Ground Water

Ground water is derived from GRACE Terrestrial Water Storage

$$P - ET - Q = \Delta TWS$$

$$\Delta TWS = \Delta GW + \Delta SM + \Delta SWE + \Delta SW$$

$$\Delta GW = \Delta TWS - \Delta SM - \Delta SWE - \Delta SW$$

P = precipitation; ET = evapotranspiration; Q = river discharge

ΔTWS = change in terrestrial water storage [from GRACE]

ΔGW = change in groundwater storage [unknown]

ΔSM = change in soil moisture

ΔSWE = change in snow water equivalent

ΔSW = change in surface water storage

[ΔGW , ΔSM , ΔSW from Global Land Data Assimilation System (GLDAS) models]

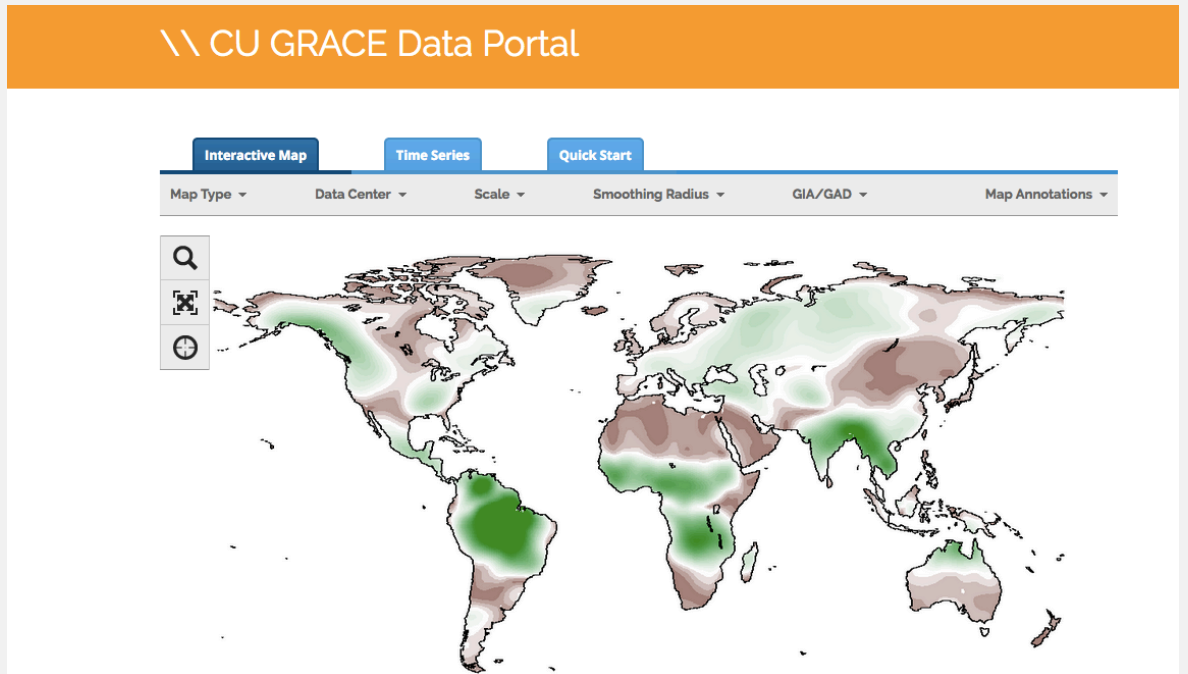

Acknowledgement: John Bolton (NASA-GSFC), Brian Thomas (NASA-JPL)

Jason 1, 2, and 3

<http://sealevel.jpl.nasa.gov/missions/>

- Non-polar orbit
- Spatial Coverage:
 - Covers 95% of world's oceans
 - 66°S-66°N
- Temporal Coverage:
 - Revisit Time: 10 hrs
 - Jason-1 December 2001 to July 2013
 - Jason-2 6/2008-present
 - Jason-3 1/2016-present
- Sensors:
 - Poseidon Altimeter
 - Advanced Microwave Radiometer (AMR) and DORIS

NASA, NOAA, CNES, and EUMETSAT Joint Missions

Poseidon Altimeter

- Estimates the height of the ocean surface with respect to a reference sea level
- A Radar with transmission frequencies of 5.3 GHz (C-band), 13.575 GHz (Ku-band)
- Spatial resolution: 11.2 km x 5.1 km
- Also used for determining selected in-land reservoir height (research to application product)

Where to get Jason Data and Lake Level Heights?

USDA Crop Explorer
U.S. Department of Agriculture
Foreign Agricultural Services

[http://www.pecad.fas.usda.gov/cropexplorer/
global_reservoir/](http://www.pecad.fas.usda.gov/cropexplorer/global_reservoir/)

The screenshot shows the USDA Crop Explorer website interface. At the top, there is a navigation bar with the USDA logo and the text "United States Department of Agriculture Foreign Agricultural Service". Below this is a banner image with the text "Crop Explorer". A "Toolbox" button is visible on the left. The main content area is titled "Latest Product News" and features a section for "October 8th 2015 - Upgrades and New Products". This section contains three bullet points detailing updates to surface water level variation products, including re-calculations based on updated altimetric parameters and the inclusion of correction factors in the ASCII text file headers. A "NOTE !!!" section follows, advising users to consider the location of the satellite ground track and the section of track used to create the products, particularly for complex and drought-prone lakes and reservoirs. Below the note is a section titled "10-day Near Real Time products with datum based on a single satellite overpass (1 day)", which includes a "Global Reservoir and Lake Monitor: 10-day resolution" map. The map shows a world map with numerous red pins indicating the locations of reservoirs and lakes. The map includes a "Map" and "Satellite" toggle, a zoom control, and the Google logo. At the bottom of the map, there is a section for "10-day Status products with datum based on a 9 year (1993-2001) mean" and a "Terms of Use" link.

Latest Product News

October 8th 2015 - Upgrades and New Products

- The surface water level variation products have recently been upgraded (from TPJO.1.1 to TPJO.1.3 and TPJO.2 to TPJO.2.3). They have been re-calculated based on updated altimetric parameters and a revised reference datum. End users are advised not to mix the old/new product versions.
- The upgraded products now include correction factors in the ascii text file header which will enable end users to translate the satellite-based time series into various orthometric frames (approximating mean sea level). At the lake product level there is also the option (left-hand panel) to view the reference and geoid height profiles which were used to determine these correction factors. Details can be found in the Q&A link.
- Additional lake products displaying variations from 2008 to the present day at 10-day resolution are also now available..

NOTE !!!

- End users must consider the location of the satellite ground track AND the section of track used to create the products. This is particularly important for complex and drought-prone lakes and reservoirs, where height variability may be location dependent. See the product headers.
- End users must also note that the graphs/products associated with the filtered time series are provided as a visualization aid only.

Terms of Use

An aerial photograph of a river delta and coastline. The river is a light brownish-green color, branching out into a complex network of channels and distributaries. The land is a mix of green and brown, indicating vegetation and bare earth. The ocean is a deep blue, with a white sandy beach visible along the coast. A semi-transparent white rectangular box is overlaid on the right side of the image, containing the title text.

Overview of Earth System Models

Earth System Models Provide Value-Added Information

Remote Sensing + Surface Observations + Numerical Models

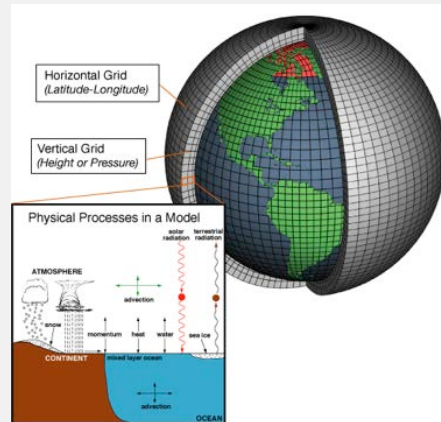

Satellite Data

Surface Measurements and In-Situ Data

Numerical Models

NASA Models Useful for Water Resources Management

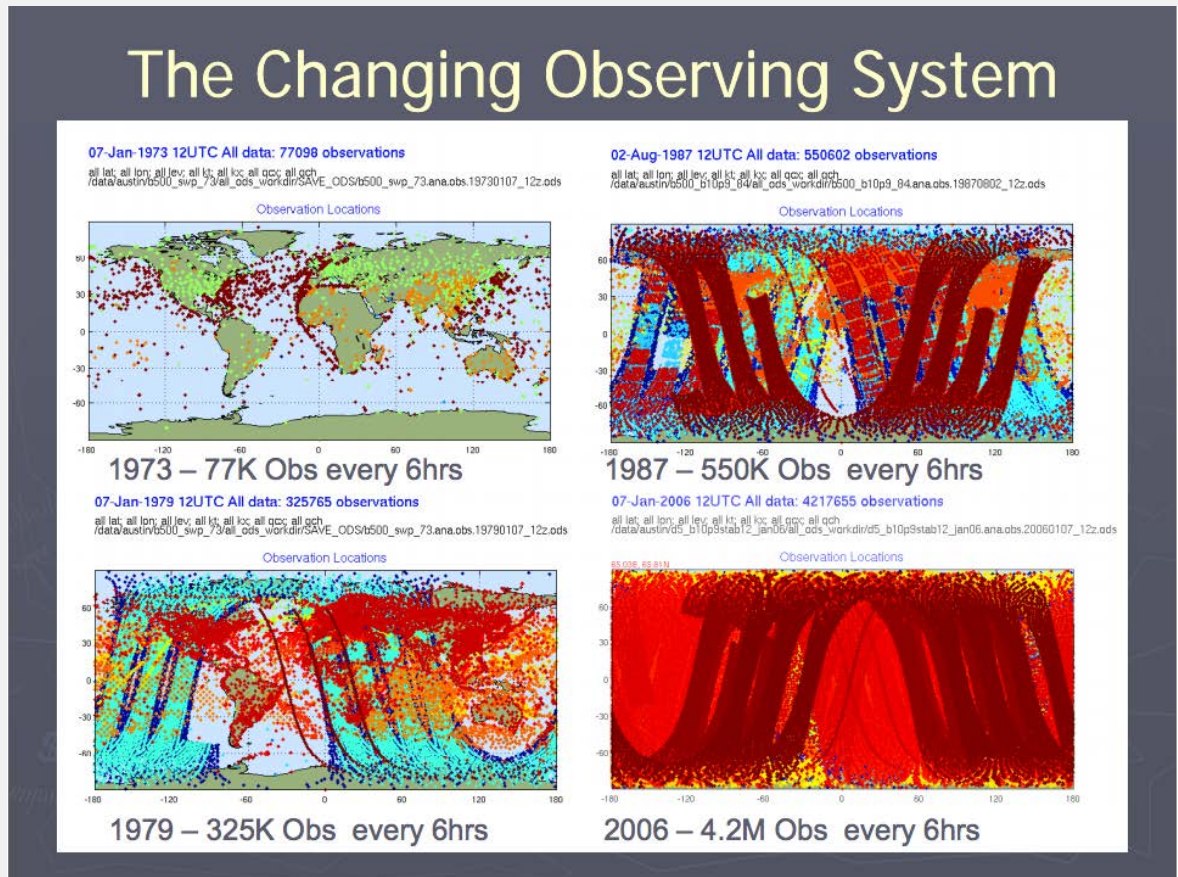

Atmosphere-Ocean-Land Models

- GEOS-5:
 - The Goddard Earth Observing System Version 5
- MERRA:
 - Modern Era Retrospective-Analysis for Research and Application
- GLDAS and NLDAS:
 - Global Land Data Assimilation System
 - North American Land Data Assimilation System

MERRA

<https://gmao.gsfc.nasa.gov/reanalysis/MERRA/>

- Blends the vast quantities of observational data with output data of the Goddard Earth Observing System (GEOS) model (1979 – present)
- Provides state-of-the-art global analyses on weather to climate time scales
- Focuses on improvement in hydrological cycle
- MERRA-Land Model: offline land surface model forced with MERRA precipitation merged with gauge-based data from the NOAA Climate Prediction Center

Coverage of satellite data assimilated in MERRA

MERRA Data for Water Resources Applications

<https://gmao.gsfc.nasa.gov/reanalysis/MERRA/>

- Output:
 - Rain
 - Snow
 - Weather and Climate Parameters
 - temperature, humidity, winds, clouds, surface radiation
- MERRA Online Atlas:
 - updated regularly with monthly comparisons versus existing reanalyses and some global observed data sets

<https://gmao.gsfc.nasa.gov/ref/merra/atlas/>

Snowfall Over the Northeastern U.S. During January 2015

Global & North American Land Data Assimilation Systems

<http://ldas.gsfc.nasa.gov/>

- Integrates ground and satellite observations within numerical models to produce consistent, high resolution fields of land surface states and fluxes
- Uses data from MODIS, TRMM, GOES
- GLDAS and a version of NLDAS use the Land Information System (LIS) with different sources of inputs:
 - Meteorological Analysis
 - Surface Solar Radiation
 - Precipitation
 - Soil Texture
 - Vegetation Classification and Leaf Area Index
 - Topography

Global Land Data Assimilation Systems

<http://ldas.gsfc.nasa.gov/gldas/>

Four land surface model versions: Noah, CLM2, Mosaic, and VIC

Inputs

- Rainfall: TRMM and multi-satellite based data
- Meteorological Data: global reanalysis and observations-based data from Princeton University
- Vegetation Mask, Land/Water Mask, Leaf Area Index: MODIS (GLDAS-2)
- Clouds and Snow (for surface radiation): NOAA and DMSP Satellites

Integrated Outputs Include:

- Soil Moisture
- Evapotranspiration
- Surface/Sub-Surface Runoff
- Snow Water Equivalent

Toll, 2004. The Global Land Data Assimilation System. Bulletin of the American Meteorological Society, 85(3):381–394.

North American Land Data Assimilation System-2 (NLDAS-2)

<http://ldas.gsfc.nasa.gov/nldas/>

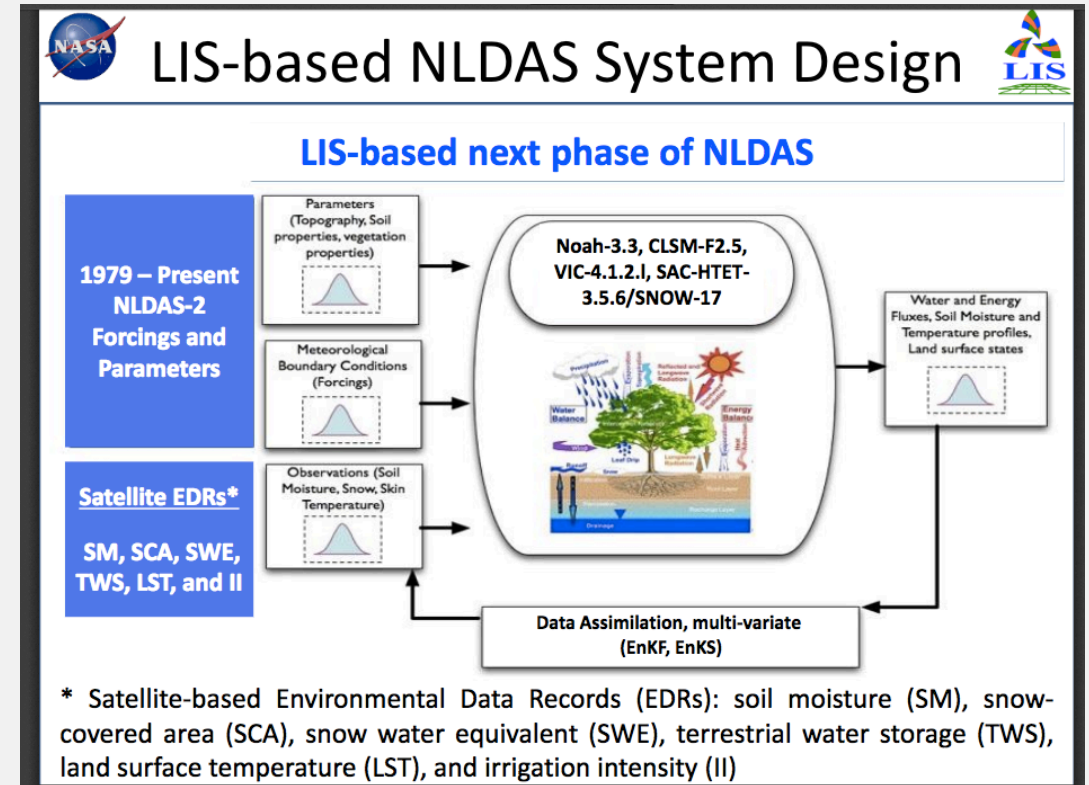

Four land surface model versions: Noah, CLM2, Mosaic, and VIC

Inputs

- Precipitation: NOAA-CPC rain gauges
- Meteorological Data, Surface Radiation Data: North American Regional Analysis

Integrated Outputs Include:

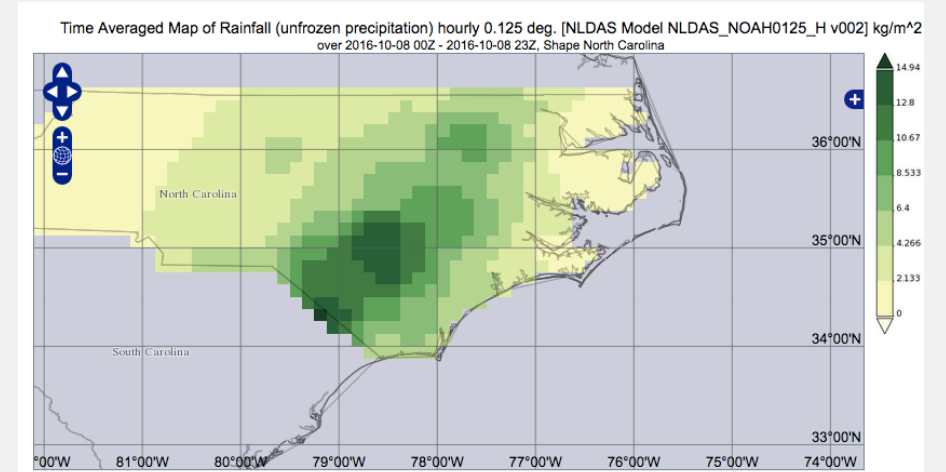

- Soil Moisture
- Evapotranspiration
- Surface/Sub-Surface Runoff
- Snow Water Equivalent

Spatial and Temporal Sub-Setting and Download

An aerial photograph of a river delta system, likely the Amazon, showing a complex network of channels and a large body of water. A semi-transparent white rectangular box is overlaid on the right side of the image, containing the word "Summary" and a horizontal line.

Summary

Advantages of NASA Water Resources Data

- Remote sensing-based data provide near-global - global coverage compared to surface-based, spatially non-uniform point measurements
- Provide data where surface-based measurements are unavailable
- Earth systems models integrate surface-based and remote sensing observations and provide uniformly gridded, frequent information of water resources data parameters
- Earth system models provide parameters that aren't directly observed by satellites (e.g. runoff, ET)
- Data are **free** and there are web-based tools for data

Bottom: Annual Precipitation (2015) from NASA GPM

Limitations of NASA Water Resources Data

- All freshwater components are measured by different satellites and sensors with varying spatial and temporal resolutions, coverage, and quality
- Satellite and model data files are large and in different data formats: training is required to learn how to access them
- Often additional processing may be needed for specific applications
- While the data are generally validated with selected surface measurements, regional and local assessment is recommended

Water Resources Data From NASA Satellites and Models

Freshwater Component	Satellite/Sensor	Model	Data Access
Rain Amount	GPM /(GMI, DPR) & TRMM /(TMI, PR) – IMERG and TMPA Multi-satellite data	GLDAS & NLDAS forcing data from NOAA Climate Prediction Center MERRA	https://pmm.nasa.gov/ http://mirador.gsfc.nasa.gov/ http://giovanni.gsfc.nasa.gov/giovanni/
