

# Applications of Earth Science Research for the National Environmental Public Health Tracking Program

*Health and Air Quality Applications Program Review, September, 2018*

Heather Strosnider, PhD, MPH  
Lead Health Scientist

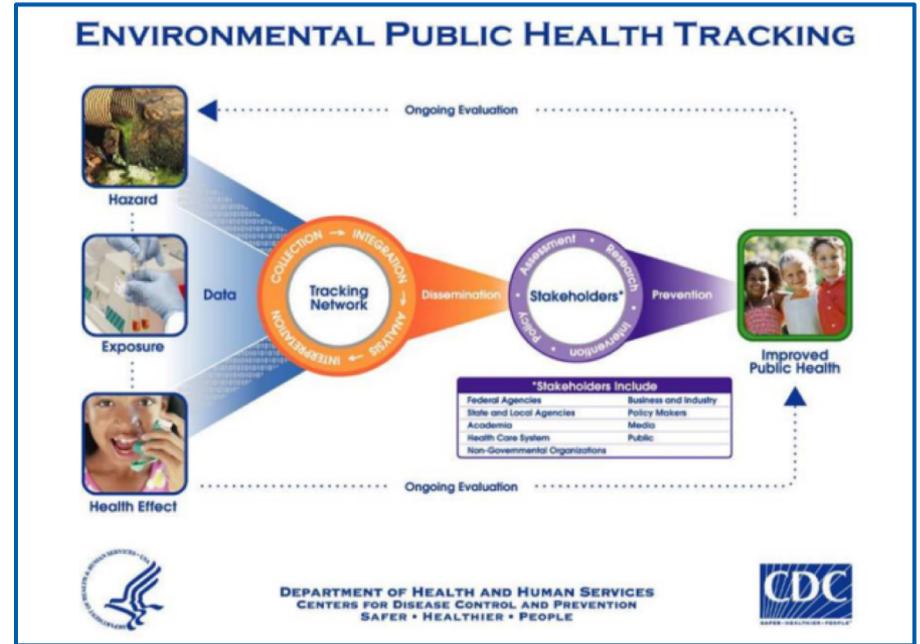

Environmental Health Tracking Section  
Lead Poisoning Prevention and Environmental Health Tracking Branch  
Division of Environmental Health Science and Practice

# National Environmental Public Health Tracking Program

**Vision:** Healthy informed communities

**Mission:** To provide information from a nationwide network of integrated health and environmental data that drives actions to improve the health of communities

# The Tracking Program

26

Grantees

25 states / 1 city

41

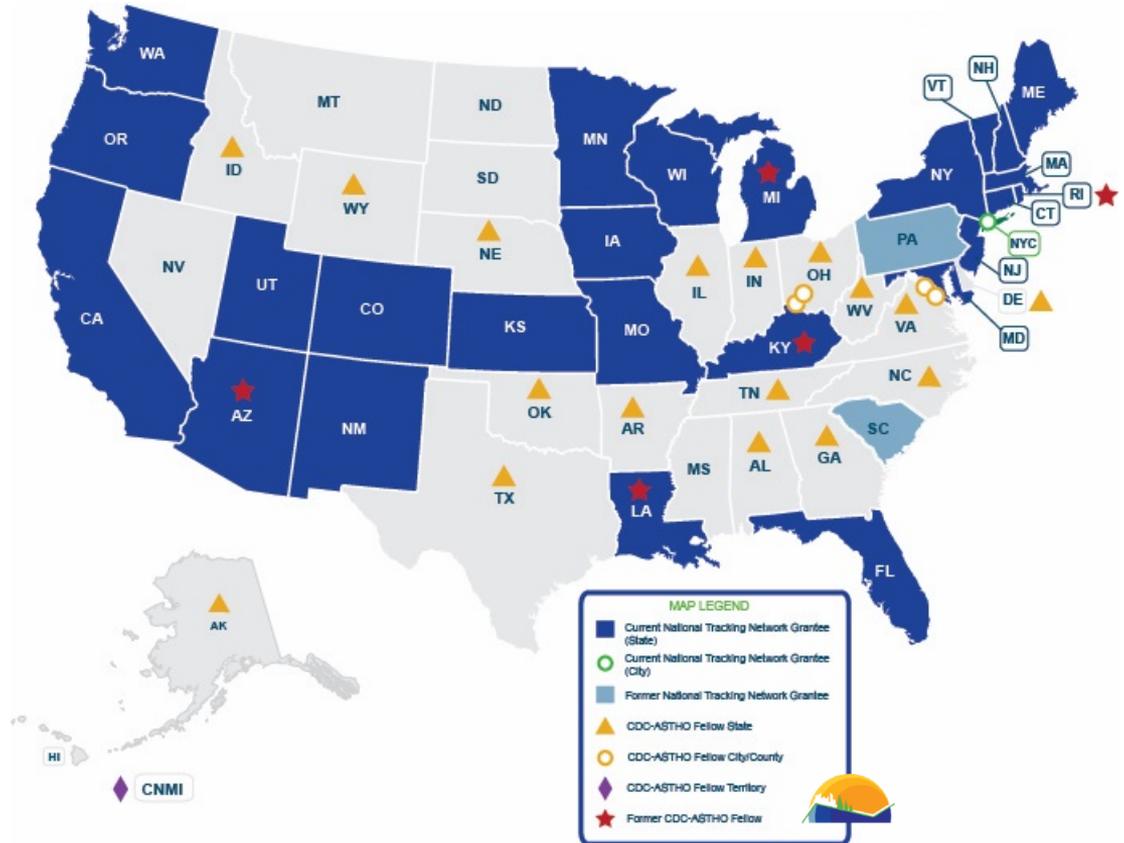

CDC-ASTHO Fellowships

Since 2009

25+

Partnerships

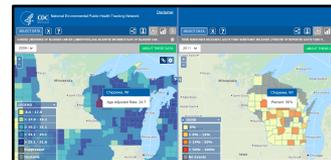

With CDC Programs, Other Federal Agencies, National Organizations

# National Environmental Public Health Tracking Network

The screenshot shows the CDC National Environmental Public Health Tracking Network homepage. At the top, it features the CDC logo and the text "Centers for Disease Control and Prevention CDC 24/7: Saving Lives. Protecting People™". A search bar and a "CDC A-Z INDEX" dropdown are also visible. The main heading is "National Environmental Public Health Tracking Network". Below this, there are social media icons for Facebook, Twitter, and YouTube. A section titled "Better information for better health" explains that the network brings together health data and environment data from national, state, and city sources. It lists three ways to use the network: using the Data Explorer for interactive maps, tables, and charts; viewing info by location for county-level data snapshots; and visiting state and local tracking websites. A "TRACKING" logo is prominently displayed. Below the logo, a section titled "ACCESS THE NEW DATA EXPLORER" offers to view and download all data in maps, charts, and tables. To the right, "INFO BY LOCATION" allows viewing data by county or zip code. Further right, "STATE & LOCAL TRACKING PROGRAMS" provides a list of programs. At the bottom, there are three main categories: "Environments" (Pesticide Exposures, Climate Change, Outdoor Air), "Health Effects" (Asthma, Cancer, Childhood Lead Poisoning), and "Population Health" (Populations and Vulnerabilities, Health Impact Assessments, Children's Environmental Health).

[www.cdc.gov/ephtracking](http://www.cdc.gov/ephtracking)

Data Explorer

The graphic for "Info by Location" features a map of the United States with a bar chart overlay. The text reads "INFO BY LOCATION Data for you! View data by county or zip code" and includes a "GO" button.

Info by Location

The screenshot shows the "Downloadable Datasets" interface. It includes a search bar, a list of datasets with columns for Name, Description, and Date Added, and a "Downloadable Datasets" section with social media links and a "GO" button.

Downloadable Datasets

The graphic for the "Application Program Interface" features a smartphone and a tablet. The text reads "ARE YOU A DEVELOPER? ACCESS TRACKING DATA USING OUR NEW API" and includes a "GO" button.

Application Program Interface

ENVIRONMENTAL PUBLIC HEALTH

**TRACKING**

# CONNECTS ENVIRONMENT & HEALTH INFORMATION

Check out CDC's data explorer and state and local tracking programs for more information.

## Environmental

- Radon
- Drought
- Sunlight & UV
- Wildfire Smoke
- Air Quality
- Extreme Heat
- Drinking Water
- Flood Vulnerability
- Community Design

- Pesticide Exposures
- Toxic Substance Releases
- Other Environmental Chemicals

## Exposures

## Health Effects

- Asthma
- Cancer
- Heart Disease
- Heat Stress Illness
- Childhood Lead Poisoning
- Developmental Disabilities
- Carbon Monoxide Poisoning
- Reproductive and Birth Outcomes

## Population Characteristics

- Lifestyle Risk Factors
- Socioeconomics
- Demographics
- Vulnerabilities

# Driving Public Health Actions

- Detect and monitor trends
- Identify populations at risk
- Identify exposure to hazards
- Examine the relationship between hazards and disease
- Assess potential disease clusters or exposures
- Track progress
- Enhance surveillance
- Improve access to quality data

**Informed,  
improved,  
evaluated...**

**programs,  
interventions,  
policies...**

**to address  
environmental  
health issues.**

Interagency Agreement

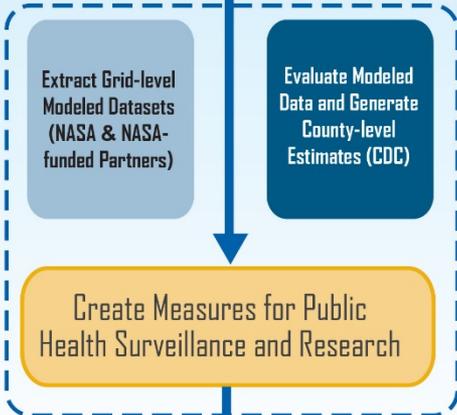

# NASA and CDC Collaboration

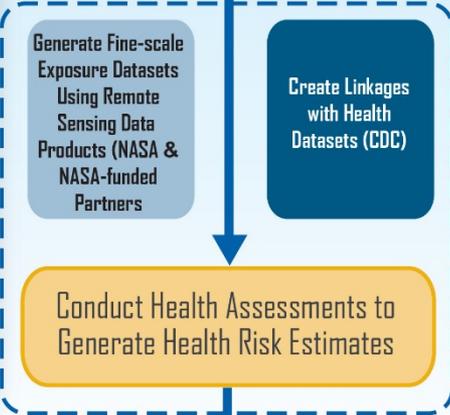

Collaboration with NASA-funded partners (e.g., ROSES)

## Collaborative Projects

### Joint Projects and Data Translation Activities

### Health Risk Assessments to Support Tool Development Efforts

- Health and Environment Linked for Information Exchange (HELIX)
- Enhancing spatial coverage of PM2.5 in the Southeast (PI: Yang Liu)
- Heat-Health Activities
- Quantify Social Vulnerabilities to Heat Stress and Strengthen Environmental Public Health Tracking and Heat Mitigation Efforts (PI: Tabassum Insaf)
- Evaluate and Enhance Suomi NPP Products for Air Quality and Public Health Applications, Specifically UV and skin cancer (PI: Jun Wang)
- Assessing and Predicting Wildfire Smoke Related Health Effects Using Satellites, In-situ Measurements (PI: Jeff Pierce)

CDC's National Environmental Public Health Tracking Network

# Historical Time-Series of Daily Heat Metrics at the Community level

National Environmental Public Health Tracking Network

## STEP 1: CONTENT ?

Climate Change

Historical Extreme Heat Days

Number of extreme heat ever

## STEP 2: GEOGRAPHY TYPE ?

State By Census Tracts

## STEP 3: GEOGRAPHY ?

- Alabama
- Arizona
- Arkansas
- California
- Colorado
- Connecticut
- Delaware
- District of Columbia
- Florida
- Georgia
- Idaho
- Illinois
- Indiana

## STEP 4: TIME ?

- All Years
- 2016
- 2015
- 2014
- 2013
- 2012
- 2011
- 2010
- 2009
- 2008
- 2007
- 2006
- 2005

## STEP 5: ADVANCED OPTIONS ?

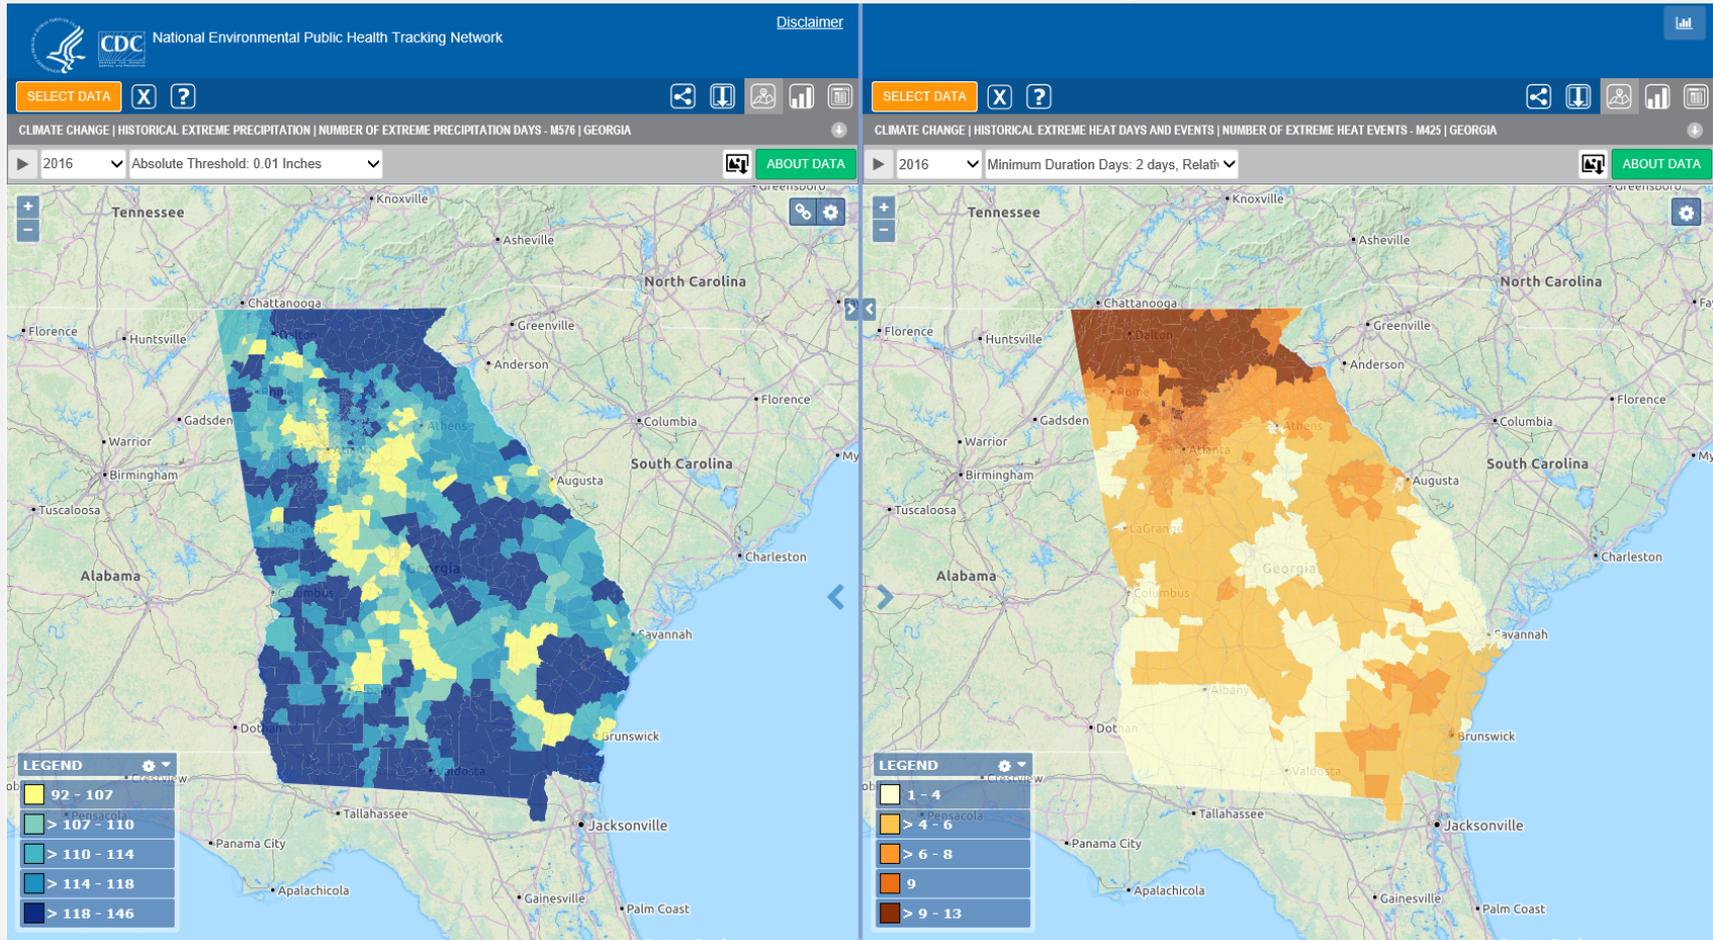

- Required
  - Heat Metric
    - Heat Metric: Daily Maximum Temperature
    - Heat Metric: Daily Heat Index
  - Minimum Duration Days
    - Minimum Duration Days: 2 days
    - Minimum Duration Days: 3 days
  - One Strat Type Only
    - Absolute Threshold
      - Absolute Threshold: 90 degrees
      - Absolute Threshold: 95 degrees
      - Absolute Threshold: 100 degrees

# Historical Extreme Heat and Precipitation Metrics

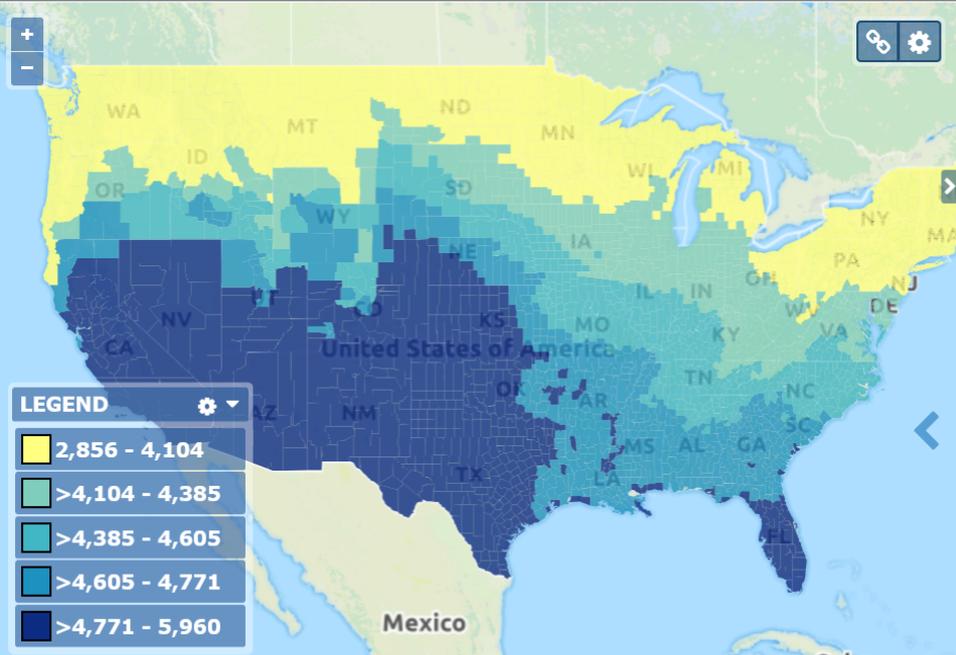

# UV and Solar Metrics

SELECT DATA X ?

SUNLIGHT AND UV | SUNLIGHT | ANNUAL AVERAGE SUNLIGHT EXPOSURE MEASURED BY SOLAR IRRADIANCE (K...)

2012

ABOUT DATA

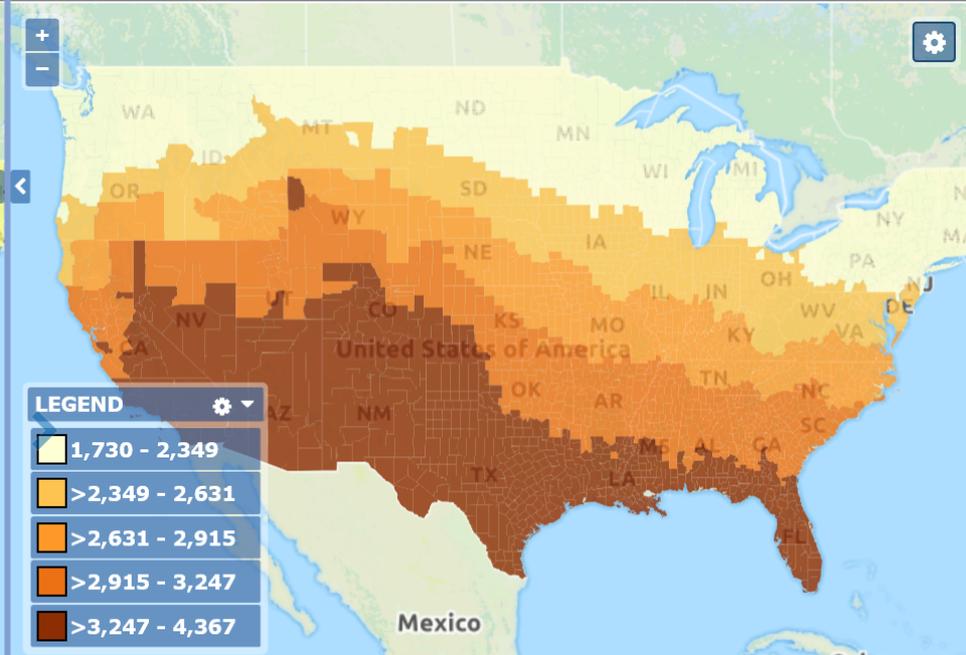

SELECT DATA X ?

SUNLIGHT AND UV | ULTRAVIOLET (UV) | ANNUAL AVERAGE DAILY DOSE OF UV IRRADIANCE (J/M2) - M723 | ALL...

2012

ABOUT DATA

Developed by Environmental Remote Sensing Group at the Rollins School of Public Health at Emory University. UV based on University of Iowa's OMI Level 2 Surface UV Irradiance Product. Solar based on National Solar Radiation Data Base (1991-1997) and SolarAnywhere (1998-2012).

# Heat – Health Activities: Motivation

- ❑ Characterize the relationship between extreme heat and health outcomes
  - Develop a heat-health risk profile for disease- or cause-specific deaths and illnesses over a wide-range of summertime temperature ranges
  
- ❑ Identify extreme heat triggers that correspond with significant health risks
  - Compile a list of region- and state-specific exposure-response relationships between daily heat metrics and health outcomes
  
- ❑ Compare existing temperature ranges used for issuing heat-related alerts with thresholds that are appropriate from a health perspective
  
- ❑ Ultimately develop an online tool for mitigating adverse health impacts associated with extreme temperatures

# Heat – Health Activities: Data and Methods

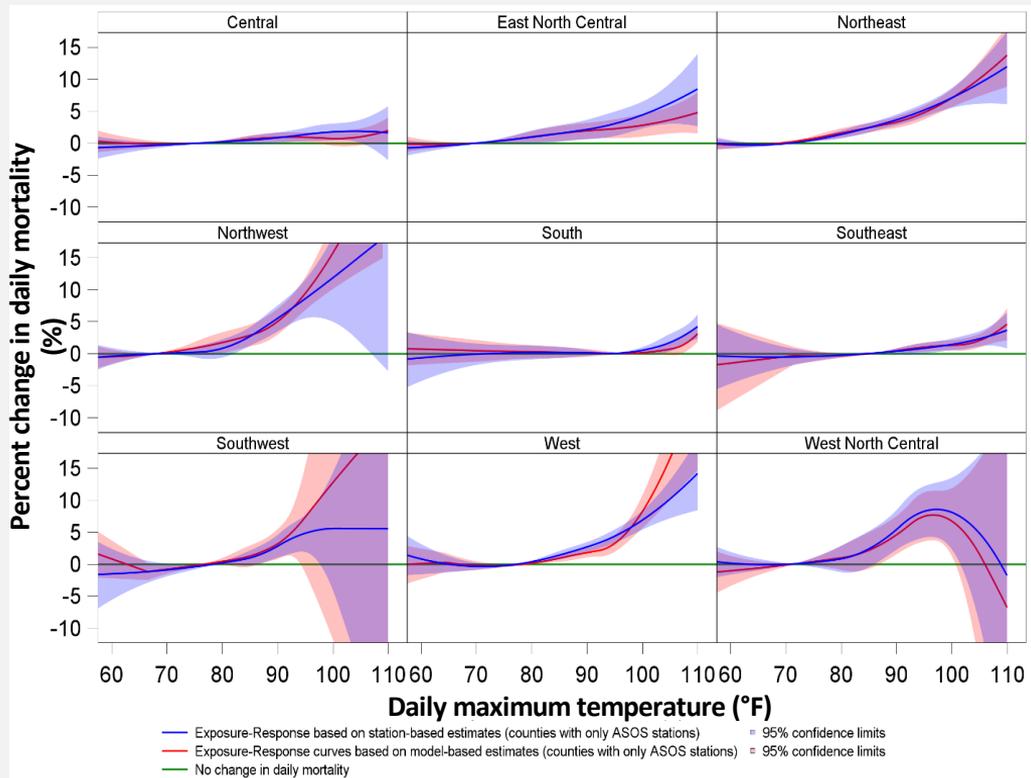

## Data Sources

- ❑ Estimates of daily heat metrics obtained from North American Land Data Assimilation System (NLDAS)
- ❑ Mortality data from National Vital Statistics System
- ❑ Non-fatal hospital admissions and emergency department (ED) visits data from the databases of Healthcare Cost and Utilization Project
  - Disease outcomes included in this analysis: all-causes, acute renal failure, fluid and electrolyte disorders, respiratory and cardiovascular diseases

## Methods

- ❑ Two-stage analysis to estimate heat-health risk relationships for deaths and illnesses
  - ❑ First stage involves a county-level time series analysis using a Distributed Lag Non-Linear Model (DLNM) for the summer months (May 1 through September 30)
  - ❑ Second stage involves a pooled analysis to summarize county-specific risks, generated using the DLNM approach, across larger geographic scales

# Heat – Health Activities: Results and Translation

- ❑ Association varies by geography and health outcome
- ❑ “Heat-attributable burden starts to occur at moderately hot heat index values, which in some regions are below the alert ranges used by the NWS during the study time period”
- ❑ Results shared with National Weather Service
- ❑ Future integration of results with real-time heat alerts on Tracking Network

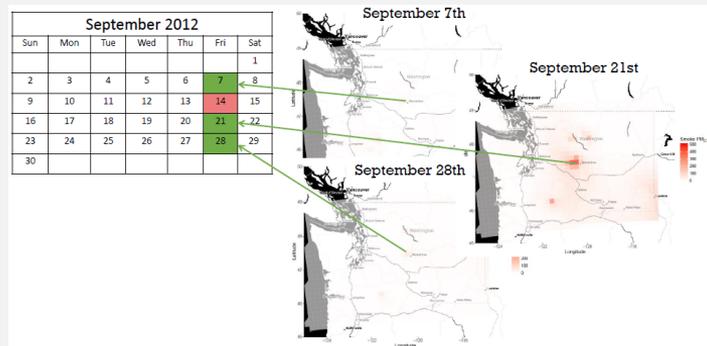

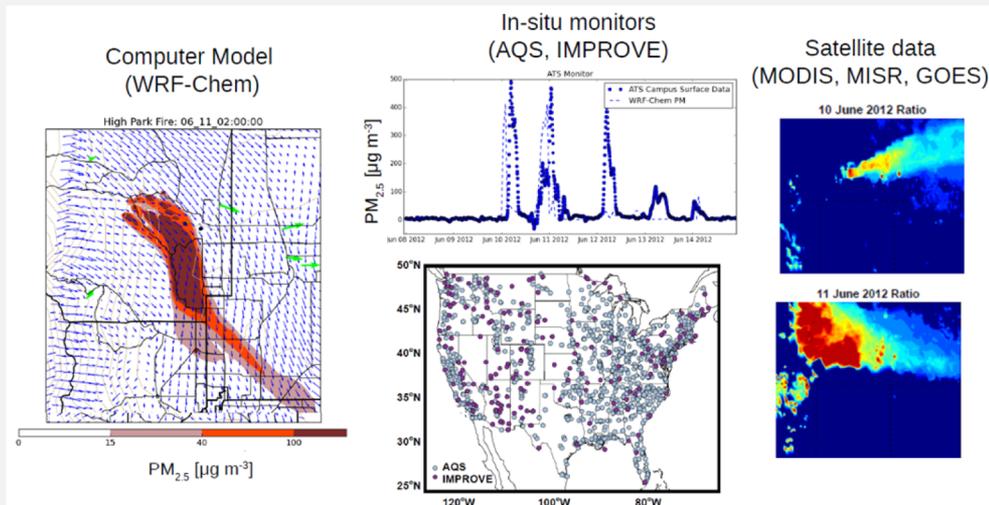

Vaidyanathan A, et al. Assessment of Extreme Heat and Hospitalizations to Inform Early Warning Systems. Under journal review.

# Wildfire Smoke – Health Activities: Motivation

- ❑ CDC has been working with partners to develop an online tool for identifying at-risk populations to wildfire smoke hazards
  - Tool will incorporate standardized health and exposure datasets, and prevention guidelines related to wildfire smoke hazards
- ❑ CDC is collaborating with Colorado State University, USFS, and state partners to:
  - Conduct a vulnerability assessment in areas impacted by wildfires/wildfire smoke hazards
  - Generate smoke predictions for historical wildfire episodes
  - Understand the impact of smoke predictions on human health outcomes
- ❑ Conducted a pilot analysis for Washington fires, 2012

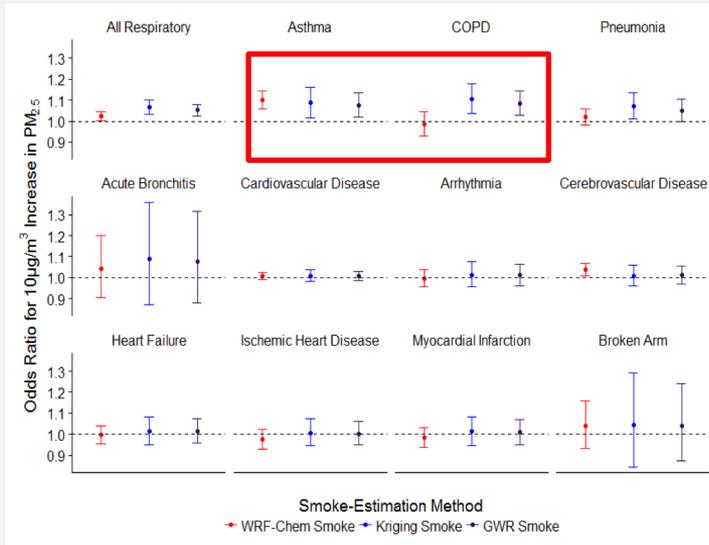

# Wildfire Smoke – Health Activities: Data and Methods

- Exposure modeling
  - Generate estimates using different data sources and methods
  - Evaluate different data sources against measurements
  - Derived estimates using hybrid approach
- Epi analysis
  - Case-crossover analyses
  - Controls for temperature, humidity, wind speed (meteorological data from NLDAS)

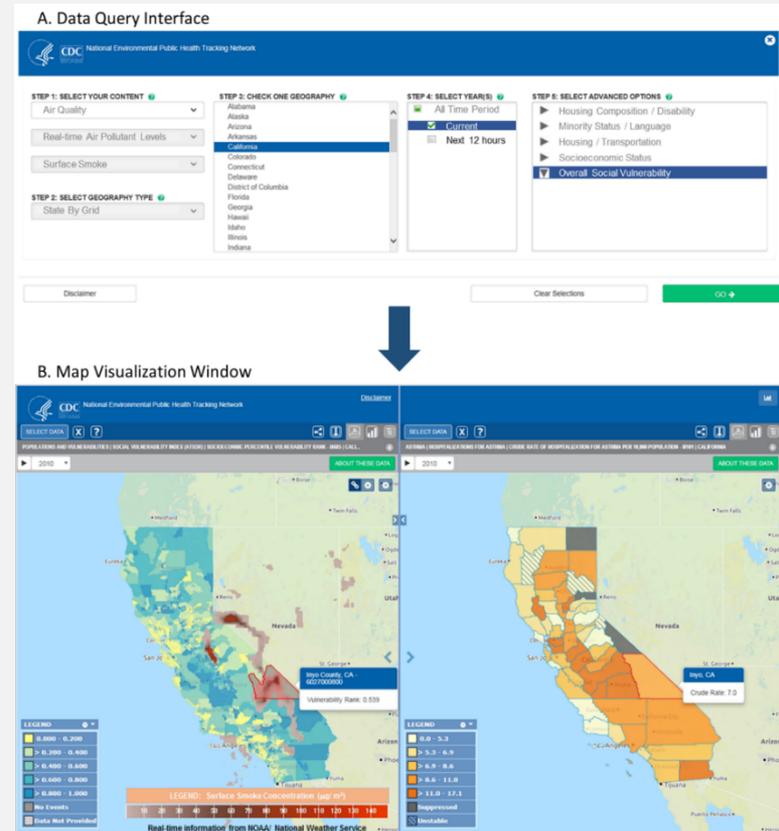

Gan RW et al. Comparison of wildfire smoke estimation methods and associations with cardiopulmonary-related hospital admissions. *Geohealth*. 2017 Mar;1(3):122-136.

# Wildfire Smoke – Health Activities: Results and Translation

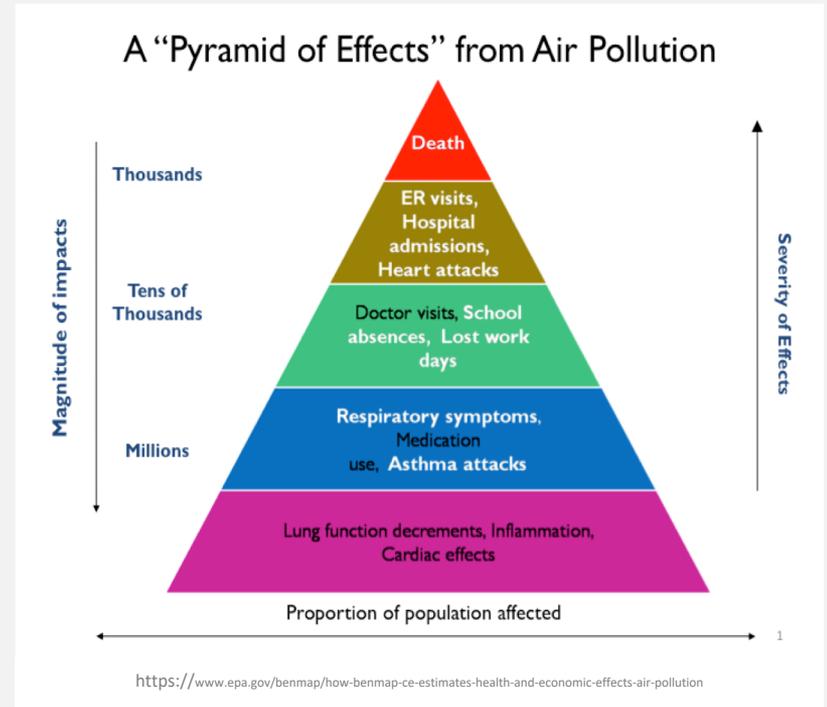

- Expand to include other wildfire episodes and compile a library of concentration – response (C-R) functions for various locations in the Western United States

Vaidyanathan A, Yip F, Garbe P. (2017). Developing an Online Tool for Identifying At-Risk Populations to Wildfire Smoke Hazards. Science of the total environment (Accepted)

# Air Pollution – Health Activities: Motivation

- ❑ Strong evidence of an association with respiratory morbidity and mortality
  - Ozone = Causal
  - PM<sub>2.5</sub> = Likely causal
- ❑ Multi-city studies provide robust data points for national policy setting
  - Mortality
  - Morbidity in 65+ years
- ❑ Evidence for respiratory morbidity in persons <65 years
  - International multi-city studies
  - Single-city studies

# Air Pollution – Health Activities: Data and Methods

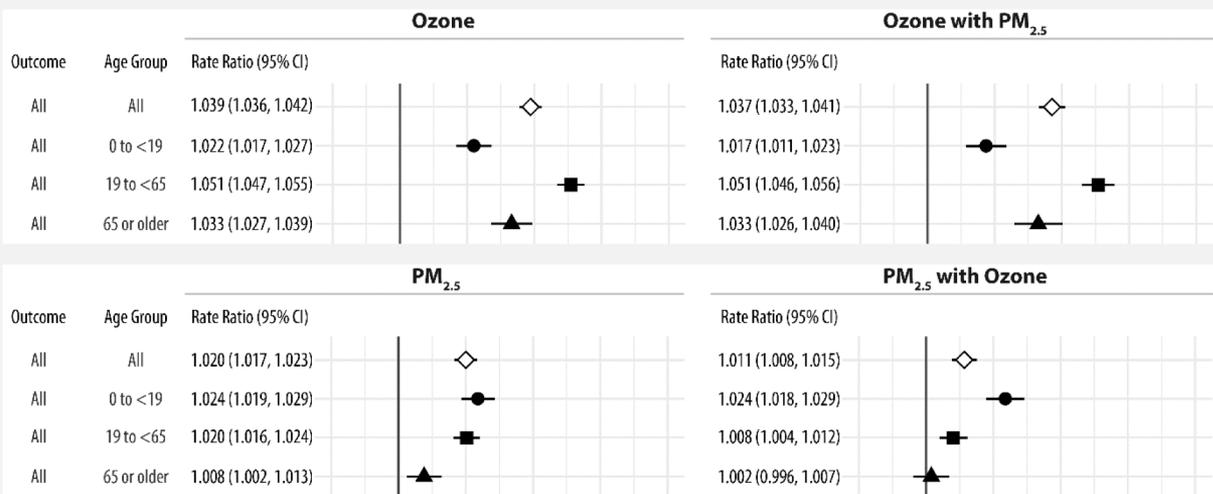

## □ Data

- Daily, county respiratory ED visits in 17 states
- Downscaler model estimates for ozone and  $PM_{2.5}$
- Temperature and dew point temperature from NLDAS data

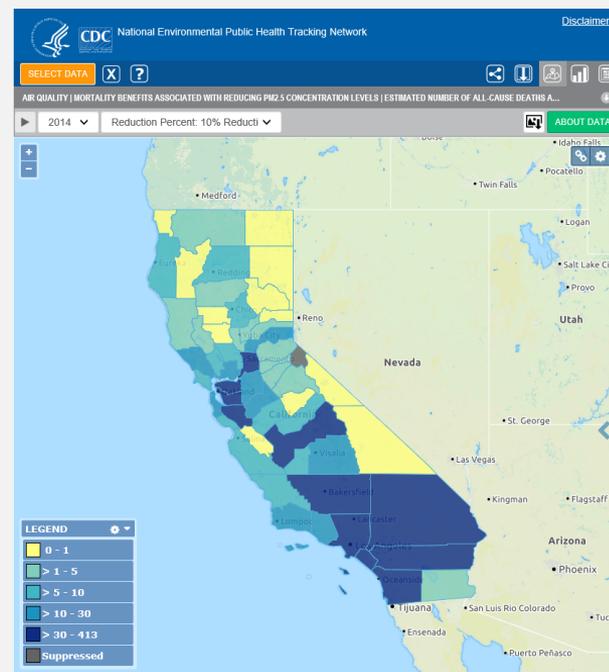

## □ Methods

- Two stage analysis
- First county specific time-series models
- Second pull county results using Bayesian hierarchical model

# Air Pollution – Health Activities: Results and Translation

- Significant positive associations for all age groups between all respiratory ED visits and both pollutants
- Future work to generate morbidity benefits associated with reductions in PM<sub>2.5</sub> and ozone

Strosnider, Chang, Darrow, Liu, Vaidyanathan, Strickland. Age-specific associations of ozone and PM<sub>2.5</sub> with respiratory emergency department visits in the US. Accepted.

# Looking Forward – Opportunities for Collaboration

- ❑ Characterize exposure, vulnerabilities, and health impacts to take action
  - Wildfires and prescribed burnings: forest, agricultural
  - Air pollution: Traffic-related pollutants
  - Climate-related events and natural/manmade disasters: Heat, HABs
- ❑ Joint collaborations to assess the effectiveness of policy and other interventions on reducing health impacts
  - Quantify changes in AQ concentrations/sources, in places with no monitors
- ❑ Using the Tracking Network as a Decision Support System and as a platform to host earth science data products
  - Need expertise and resources to transform raw data for public health
  - Need repeatable, sustainable data products to support ongoing surveillance

# Thank you
